July 2006

Status on EU directive RoHS (restriction of the use of certain hazardous substances)

Dear Customer,

The European directive about RoHS involved a lot of questions. Here is further information regarding the application of the directive for residual current monitors.

What about the RoHS rules for the RD2?

The RD2 are not in the product list covered by the RoHS Directive. But in some case they may be components of concerned equipments. Consequently customers may demand that the a.m. products will be made RoHS compliant.

Nevertheless that the RD2 might be made RoHS compliant, the responsibility for the concerned equipment remains with the manufacturer of it.

What is the time schedule?

The delivery of the above listed items, in line with the RoHS Directive, will vary according to the inventory levels of the raw materials or components.

The plan is to be ready in production according to what is listed below.

The identification references / order code will not change.

Information will be available when the RoHS compliance is achieved.

However, this letter does not constitute a binding commitment.

List of items ready on 1st July 2006:

1. Residual current monitors RD2 230V,

   Residual current monitors RD2 48V will be RoHS compliant on 31st December 2007.

With best regards,

Quality Manager

Valter Patruno
