

Integrating wind energy into the microgrid of the remote island of Faial in the Azores

Boosting the capacity of an oil-fired micropower grid with clean wind energy to minimize environmental impact without destabilizing the network.

Fuel savings of more than 3.5 million liters a year.
Enough fuel to travel about 2,300 times around the world by car.

Island of Faial
in the Azores
about 1,500 Km
off the coast
of Portugal
