Application, characteristics and technical data have to be taken from the hardware data sheet:

520ADD01 data sheet 1KGT 150 868

**Operation**

The I/O adapter 520ADD01 is used to connect RTU520 I/O modules to a RTU520 or RTU540 communication module.

Following RTU520 I/O modules could be connected to X1:
- 520AID01
- 520BID01
- 520BOD01
- 520AOD01
- 520PTD01

**Processing Functions**

The I/O adapter is connected to the WRB I/O bus (wired OR bus) and generates the addresses for the connected I/O modules within the I/O assembly automatically.

**Settings**

The jumper S1 is used to change the start address of the first I/O module connected to the 520ADD01. In position 2-3 an offset is calculated to the start address. So it is possible to add up to 8 I/O modules to the previous I/O assembly (see Fig. 6 and Fig. 7). In RTUtil500 configuration the parameter "8/8 addressing mode" has to be selected.

If max. 4 I/O modules are connected to the previous I/O assembly the jumper S1 is in position 1-2 (see Fig. 8). Thus no offset is added. This configuration is only possible with RTU540. In the RTUtil500 configuration the parameter "4/4/4/4 addressing mode" has to be selected at the I/O assembly.

<table>
<thead>
<tr>

<th>Default</th>
<th>Parameter location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Addressing mode</td>
<td>8/8</td>
<td>I/O assembly</td>
</tr>
<tr>
<td></td>
<td>8/8: up to 8 I/O modules per I/O assembly, maximum 2 I/O assemblies per virtual I/O rack</td>
<td></td>
</tr>
<tr>
<td></td>
<td>4/4/4/4: up to 4 I/O modules per I/O assembly, maximum 4 I/O assemblies per virtual I/O rack (not used with RTU520)</td>
<td></td>
</tr>
</tbody>
</table>

**Signaling**

The module has two green LEDs for signaling the activity on the I/O bus.

**Connections**

The RTU520 I/O modules are connected to the WRB I/O bus via connector X1. The previous adapter or a communication module is connected at X2 via the WRB I/O bus. The WRB I/O bus to the next I/O adapter is connected to X3 (see Fig. 2).

The usage of the adapter 520ADD01 within an RTU520 DIN rail configuration is shown in Fig. 6.

The usage of the adapter 520ADD01 within an RTU540 DIN rail configuration is shown in Fig. 7 and Fig. 8.

**ADVICE**

To prevent damage on the connected modules de-energize the system before plugging or unplugging the I/O bus connectors.

**ADVICE**

To prevent unintended disconnection of the I/O bus connectors end stops (e.g. BAM3 1SNK900001R0000) shall be used at both ends of the I/O assembly.

**ADVICE**

The length of the WRB connection cable between two I/O adapters is limited to 30 cm.

The specifications, data, design or other information contained in this document (the “Brochure”) - together: the “Information” - shall only be for information purposes and shall in no respect be binding. The Brochure does not claim to be exhaustive. Technical data in the Information are only approximate figures. We reserve the right at any time to make technical changes or modify the contents of this document without prior notice. The user shall be solely responsible for the use of any application example or information described within this document. The described examples and solutions are examples only and do not represent any comprehensive or complete solution. The user shall determine at its sole discretion, or as the case may be, customize, program or add value to the ABB products including software by creating solutions for the end customer and to assess whether and to what extent the products are suitable and need to be adjusted or customized.

This product is designed to be connected to and to communicate information and data via a network interface. It is the users sole responsibility to provide and continuously ensure a secure connection between the product and users or end customers network or any other network (as the case may be). The user shall establish and maintain any appropriate measures (such as but not limited to the installation of firewalls, application of authentication measures, encryption of data, installation of anti-virus programs, etc) to protect the product, the network, its system and the interface against any kind of security breaches, unauthorized access, interference, intrusion, leakage and/or theft of data or information. ABB AG is not liable for any damages and/or losses related to such security breaches, any unauthorized access, interference, intrusion, leakage and/or theft of data or information.

ABB AG shall be under no warranty whatsoever whether express or implied and assumes no responsibility for the information contained in this document or for any errors that may appear in this document. ABB AG’s liability under or in connection with this Brochure or the files included within the Brochure, irrespective of the legal ground towards any person or entity, to which the Brochure has been made available, in view of any damages including costs or losses shall be excluded. In particular ABB AG shall in no event be liable for any indirect, consequential or special damages, such as – but not limited to – loss of profit, loss of production, loss of revenue, loss of data, loss of use, loss of earnings, cost of capital or cost connected with an interruption of business or operation, third party claims. The exclusion of liability shall not apply in the case of intention or gross negligence. The present declaration shall be governed by and construed in accordance with the laws of Switzerland under exclusion of its conflict of laws rules and of the Vienna Convention on the International Sale of Goods (CISG).

ABB AG reserves all rights in particular copyrights and other intellectual property rights. Any reproduction, disclosure to third parties or utilization of its contents - in whole or in part - is not permitted without the prior written consent of ABB AG.
