Asset Management Services
Asset Management Roadmap

Turn observations into a prioritized, practical and actionable plan for improving your business approach to asset management.

The Asset Management Roadmap is an ideal follow-on to the Asset Management Health Report. The Health Report consulting package reviews the current maturity of your asset management systems and processes, and identifies opportunities for achieving improved business outcomes in asset management as well as the systems and processes that support them. The Roadmap is where those observations are converted into actions. This module will convert your Asset Management Health Report into a prioritized, practical and actionable plan of action*.

Maximize your business benefit!

This module works with you to:

- Assist in defining or refining your Asset Management policy, goals and ambitions
- Prioritize the opportunities identified in your Asset Management Health Report, based on feasibility, timeline, cost and anticipated business benefit
- Create a plan of action that will define desired outcomes, identify resource requirements, and include an achievable implementation roadmap
- Determine milestones and target completion dates for actionable initiatives, and a schedule for ongoing review and continuous improvement

* Prerequisite: Some form of initial asset management maturity baseline report should already be in place, whether from ABB’s Asset Management Health Report consulting engagement or a similar effort.
Proven methodology

Our service delivery methodology is a performance-proven, four-step process that yields results.

1 Prepare
- Determine scope and objectives
- Identify key contributors

2 Execute
- On-site kick-off, with overview training, and review of Health Report (or similar; see prerequisite)
- Workshop(s) to review and define your asset management policy and goals, review and prioritize initiatives, create action plan, and define milestones and timelines

3 Recommend
- Comprehensive action plan with timelines, milestones, responsibilities and methodology

4 Review and follow up
- On-site in-depth review of Asset Management Roadmap
- Next steps will be agreed, and milestones for improvements determined.
- Periodic follow-up to review results and progress
