Current life cycle status

TYRAK LCI type YRTK is in the Obsolete phase since 01.01.2013 according to the ABB life cycle model outlined above.

Life cycle plan

The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

In the Obsolete phase the product support for TYRAK LCI is not anymore available.

Recommended actions

It is highly recommended to upgrade the drive’s control unit to AMC control platform (refer to Control Upgrade service product description). After this Control Upgrade service the drive installation will return to the Classic phase where complete life cycle services will be available (refer to Life cycle Status Statement of SAMI MEGASTAR W after Control Upgrade).

Alternatively various replacement products are available for SAMI MEGASTAR W (i.e. ACS1000).

Further information

For more information on drives life cycle management and available services contact your local ABB organization or at www.abb.com/drives.
