## New improved design street light kit (SLK)

Subject: Homac® product update

As part of our ongoing effort to deliver maximum value to our customers, ABB introduces its new best-of-breed Homac street light kit (SLK). The new design leverages the advantages of the legacy Homac SLK and the Amerace 65U. As illustrated below, the new Homac SLK incorporates the ultra-reliable interconnect sealing chamber from the legacy SLK with the proven cable sealing design of the 65U. The compact overall profile is ideally suited to the tight confines inside a handhole. The new SLK provides dependable environmental protection along with breakaway capability in both fused and non-fused models. The new SLK models were released to production in the second quarter of 2019. The enhanced SLK is a replacement for the two existing product families, so there is no need for specification updates since the part numbers will not change.

ABB's Homac brand offers a complete line of underground and substation connectors and is recognized as an industry leader for its Flood-Seal™ technologies and custom solutions. Amerace is a world-leading brand of airfield lighting products. Both are brands of ABB Installation Products Inc.
