

Type LCB II Relay Modules

Effective: September 1985
NEW INFORMATION

These instructions contain a brief description, schematic, component location and bill of material for the following LCB modules:

DTD	Demodulator/Time Delay
MD	Modulator/Demodulator
IFT-1/2	Audio Tone Interface
IFO-1/2	Fiber Optic Interface
RELAY	Relay Sensing Logic
DTT	Direct Transfer Trip
AXLM	Auxiliary Logic
ARTM-1/2	AR Trip Logic

All possible contingencies which may arise during installation, operation, or maintenance, and all details and variations of these modules do not purport to be covered by these instructions. If further information is desired by purchaser regarding his particular installation, operation or maintenance of his equipment, the local Westinghouse Electric Corporation representative should be contacted.

CAUTION: Printed circuit modules should not be removed or inserted while the LCB is energized. Failure to observe this precaution can result in an undesired tripping output and/or component damage. In addition, modules should not be interchanged between relays without re-checking calibration.

All integrated circuits used on the modules are sensitive to and can be damaged by the discharge of static electricity. Electrostatic discharge precautions should be observed when handling modules or individual components.

CONSTRUCTION

The LCB modules are designed for insertions into a 3 rack unit LCB chassis. Module terminations are provided by means of a terminal connector.

Following is a tabulation of the module widths and number of connector terminals.

Module Name	Module Location Widths	No. Connector Terminals
ALS	2	18
DTD	1	18
MD	1	18
IFT-1/2	1	18
IFO-1/2	1	18
RELAY	1.75	35
DTT	1	18
AXLM	1	18
ARTM-1/2	3	22

NOTE: 1 module location width equals 1.2 inches.

MODULE APPLICATION/DESCRIPTION

ALS – Analog Logic Power Supply

The ALS power supply covered in other instructions provides +/-15Vdc to power the LCB relay. Units are available for 48, 125 or 250 Vdc station batteries. This module is covered by I.L. 41-830.11.

All possible contingencies which may arise during installation, operation or maintenance, and all details and variations of this equipment do not purport to be covered by these instructions. If further information is desired by purchaser regarding this particular installation, operation or maintenance of this equipment, the local ABB representative should be contacted.

DTD – Demodulator and Time Delay

The DTD module is used only for 3 terminal line applications and contains a demodulator for the second channel and a channel delay equalization circuit (TD) to compensate for possible different delays in the two channels.

MD – Modulator/Demodulator

The MD module contains both the modulator and demodulator for transmission and detection of the LCB communicated signal.

The modulator generates the 1.7 KHz carrier signal and contains the circuitry to provide the modulation of the carrier signal based on the sequence output voltage from the RELAY module. In turn, the modulated output connects to the channel interface for transmission to the remote terminal.

The demodulator receives its information from the respective channel interface (audio or optical) and reconstructs the remote LCB signal.

IFT – Audio Tone Interface

The IFT module contains the circuitry to provide both the transmit and receive isolated interface with the user's audio tone equipment or equivalent.

The transmitter provides adjustable output for proper coordination with the communication medium.

In the receive portion, input level sensitivity is adjustable and stabilized with an AGC circuit. Detection circuits are employed for high and low level, excessive noise to signal levels, and missing cycle periods.

For 3 terminal line applications, two channel interface modules are required.

IFO – Optical Interface

The IFO module contains the circuitry to provide both the transmit and receive interface to fiber optic cable.

The transmitter consists of a fiber optic LED emitter mounted on a bracket extending to the rear of the module.

For the receive portion, a bulkhead connector mounted on the same bracket as the emitter provides a means for connection of the receive fiber optic cable. From this connector, a larger core fiber connects to a fiber optic PIN photodiode detector in a shielded receiver circuit. Following the detection, the receiver employs an AGC circuit, low level and missing cycle detection.

For 3 terminal line applications, two channel interface modules are required.

RELAY – Relay Sensing

The RELAY module contains the circuitry to generate, compare and determine trip for the LCB current differential system relaying quantities. Included are: a sequence network with independent sensitivity selection for positive (P), negative (N) and zero (Z), adjustable system pickup setting (T DIAL), adjustable channel delay equalizer, comparison circuits for the local versus remote quantities, trip detection and channel monitoring functions.

DTT – Direct Transfer Trip

The DTT module is used as an option to provide a direct transfer trip function utilizing the same channel as that employed for normal LCB relaying.

For tripping, the LCB system utilizes the ARTM-2 module, which provides 2 AR relays, with one dedicated for direct transfer trip.

AXLM – Auxiliary Logic

The AXLM module is used to provide auxiliary logic, timing, indication and input/output features associated with the LCB relay system. Such features include electrical target reset, trip desensitizing on breaker closing, overcurrent trip options on loss of channel(s), and sustained loss of channel monitoring and indication.

ARTM-1/2 – AR Trip Module

- 1 (One AR)
- 2 (Two AR)

The ARTM-1, single trip, or ARTM-2 double trip, module provides the final AR contact tripping output for the LCB relay system. Block of tripping and indication during dc power up/down as well as provision for manual reset is also provided on this module.

MODULE REFERENCE INFORMATION**DTD Module – Style 1603C76G02**

Internal Schematic: 1351D96
Component Location: 1493B67
Chassis Location: POS. C

MD Module – Style 1603C76G01

Internal Schematic: 1351D95

(NOTE: Subassembly Style is 1581C27G01)

RENEWAL PARTS

Repair work can be done most satisfactorily at the factory. However, interchangeable parts can be furnished to those customers who are equipped for doing the repair work. When ordering parts, always give the complete nameplate data, and style numbers from the electrical parts list.
