1 Introduction

1.1 Scope of the document
This document describes the steps to see the Webvisu of AC500 PLCs in the Edge browser.

1.2 Compatibility
The application note explained in this document has been used with the below engineering system versions. It should also work with other versions, nevertheless some small adaptations may be necessary, for future versions.

- AC500 V2 PLC
- Automation Builder 2.x or newer

1.3 Overview
2 Webvisu in Edge

2.1 Download the 32-bit Java Version

Search for Java Downloads for All Operating Systems and then choose Windows Offline.

You can also use this direct link: https://javadl.oracle.com/webapps/download/AutoDL?BundleId=246806_424b9da4b48848379167015dcc250d8d

Then install the Java version.
2.2 Add required sites to Java Site List

1. Open Java Settings in Control Panel >

2. Open the Security tab and then the "Edit Site List …"

3. Add the required PLCs e.g. with "http://<IP-address>/webvisu.htm"
2.3 Set up in Edge

1. Go to your Edge browser and choose settings

2. Choose Default browser
3. Add your required page in Internet Explorer mode pages

4. Type in your required page (e.g. http://192.168.5.10/webvisu.htm) and click add.

If more than one URL is needed additional URLs can be added here.

5. Choose Allow in the drop-down menu by Allow sites to be reloaded in Internet Explorer mode (IE mode)

6. Now restart the browser
2.4 Call the Webvisu in Edge

1. Type the address in the address line of Edge and press Allow if the below warning is shown.

2. Maybe you must reload the page, after that this will be shown: Check the box with “I accept…” and choose Run.

3. Maybe you must reload the page, after the page loaded you see this. Now choose Allow.

4. After 30 days it would be shown the message “This page will no longer load in internet Explorer mode”, then pleas choose “Add back”. The page will be load for the next 30 days, then you have to repeat it again.
