Efficient drive engineering with Drive Manager for SIMATIC device tool

Drive Manager for SIMATIC (DM4S-01) offers machine builders and system integrators a device tool to configure and monitor ABB’s low voltage AC drives in the SIMATIC STEP 7 engineering environment. Engineering drives and PLCs in one environment simplifies work, and saves commissioning time and cost.

Drive Manager for SIMATIC is a plug-in device tool that can be easily installed into the STEP 7 and TIA Portal. It utilizes the TCI interface of the SIMATIC PLC to communicate with the drives connected to PROFIBUS or PROFINET network.

The setup enables engineering ABB’s low voltage AC drives from the SIMATIC environment without the need for a separate ABB specific PC tool. Drive Manager is also available with ABB’s AC500 PLC and included in the Automation Builder engineering environment.

Function block library
ABB offers a function block library to enable easy integration of ABB low voltage drives in the SIMATIC S7 environment. The function block library is available from the ABB website (document number: 3AU0000099358). The ZIP package includes manuals, examples and GSD files that can be imported to the SIMATIC S7 environment.
