PRODUCT LIFE CYCLE STATUS STATEMENT

SAMI MEGASTAR W

The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

**Current life cycle status**

The mentioned product subtype of SAMI MEGASTAR W drive is in the Obsolete life cycle phase since 01.01.2017 according to the ABB life cycle management model outlined above.

**Life cycle plan**

In Obsolete life cycle phase no services are available other than end-of-life services; but in this case ABB offers the possibility to apply a Control Upgrade (AMC34) Service in order to extend the life cycle support for the installation.

The sales of this Control Upgrade Service will be stopped by 31.12.2022. Thereafter no other services than end-of-life services are available.

**Recommended actions**

It is highly recommended to upgrade the drive’s control unit to AMC control platform before 31.12.2022 (refer to Control Upgrade service product description). After this Control Upgrade service, the drive installation will return to the Classic life cycle phase where complete life cycle services will be available (refer to Life Cycle Status Statement of SAMI MEGASTAR W after Control Upgrade (AMC34)).

Alternatively, various replacement products are available for SAMI MEGASTAR W (e.g. ACS1000).

**Product availability**

Manufacturing of product has stopped and it is not available for sale.

---

**Service availability**

**Available Services**

- Control Upgrade
- Replacement
- Disposal and Recycling

**Limited available Services**

- Spare parts
- Preventive Maintenance
- On-site Repair
