

BUSINESS AREA: MOTION

ABB Mechanical Power Transmission

Facts & Figures

For more than 140 years, ABB's Mechanical Power Transmission division has been the designer, manufacturer and marketer of Dodge® mounted bearings, enclosed gearing, and power transmission components. ABB offers the broadest portfolio of mechanical power transmission products in the industry, and they sell them to value-buyers in rugged industries such as mining, aggregate, cement, grain handling, and food and meat processing. The Mechanical Power Transmission division manufactures in around five locations.

Revenues

\$250–750 million

Market position

No. 5 globally
No. 2 in North America

Key market drivers and trends

- **Safety is a priority:** Mechanical products should operate with minimal human interaction, so they are designed and manufactured to that standard in order to keep customers and their employees safe.
- **Buying for lifetime costs, not purchase price.** Products are designed to be robust and reliable, ensuring longer equipment life and system uptime to reduce the total cost of ownership.
- **Investing in digitized products and services.** The division has invested in online tools and monitoring solutions to make it easier and safer for customers to access data and information.

Market

~\$15 billion
