Aspects of productivity

ABB's vision, "Power and productivity for a better world," is proudly displayed alongside the company logo on advertisements, products and publications such as ABB Review. Following on from the present issue with its strong focus on solar power, the upcoming edition will look at the company's technology from a productivity perspective.

Topics covered will include the dual-armed Yumi robot, which is set to expand not only the scope of robot applications, but also to redefine the way humans and robots will interact in future.

Productivity is not just about what new products can do, but is also about making sure the existing installed base is operating optimally. ABB's Asset Health Center™ is one example of ABB supporting customers in this respect.

Focusing on ABB's R&D expertise, the upcoming issue will feature the first of a series of articles on research on oscillations, an often underestimated field that has repercussions for virtually all technical systems.
