GENERAL FACTSHEET

Site construction management health check

ABB can undertake an assessment of your site or project construction processes and legal compliance.

In today’s environment it is difficult to maintain your own team of project professionals who are familiar with the ever changing legislative demands. Along with this pressure, site projects have their own inherent HSE (Health, Safety and Environmental) and financial risks, coupled with potential disruption to existing operations.

What we offer
ABB offers a site construction management health check to provide an independent overview of the current site project risks.

Through visits to the project offices and to site the audit will benchmark your construction project against industry best practice in:

- Hazard identification
- Methods of construction
- Project management systems

The report will highlight any gaps in regulatory compliance, (e.g. Construction Design and Management (CDM) and Waste Management Plan (WMP) regulations), identify any potential cost and time savings, highlight deficiencies in existing systems requiring action and provide recommendations for improvement.

Benefits
The study:

- Provides a 3rd party, independent review
- Ensures regulatory compliance
- Identifies any potential shortfalls or gaps in planning
- Highlights any potential cost and time savings

Why ABB?
ABB has considerable experience in the project and construction industry. Our team of experienced specialists with operational heritage will use their experience to make pragmatic technical judgements and offer solutions that are cost effective.

ABB can provide the whole solution to ensure construction projects are managed safely and efficiently; from the project health check, to the implementation of any identified improvement opportunities. As part of ABB we have access to a wide range of engineering disciplines that can be called upon whenever needed.
