

## Welcome to ABB Automation Builder 2.2.2

These release notes contain important information about the Automation Builder software. Please read this file carefully and completely. It contains the latest information and relevant documentation. The latest version of this document is available at:  
[http://dg8gvgfk7mhsg.cloudfront.net/AB\\_ReleaseNotes/Automation\\_Builder\\_2.2/ReadMe.pdf](http://dg8gvgfk7mhsg.cloudfront.net/AB_ReleaseNotes/Automation_Builder_2.2/ReadMe.pdf)

### Most important changes of Automation Builder 2.2.2

**No functional changes, scope of service release is limited to the following two fixed issues:**

- PLC - AC500 V3 Processor Modules (PM5xyz): Correct information is shown regarding required/missing runtime license for KNX protocol.
- Panel Builder: Integration of Panel Builder V2.8.0.424 to fix all known cyber security issues.

### Most important changes of Automation Builder 2.2.1

#### Automation Builder

- Troubleshooting is eased by an integrated Automation Builder functionality to collect all available data and zip it for exchange with support line

#### PLC - AC500 V3 Processor Modules (PM5xyz)

- Much faster access to RETAIN/PERSISTENT and addressed (%M area) variables
- Additional PLC shell commands for ethernet extended diagnosis
- CAN: Support of CM598-CN, limited to protocols CAN 2A and CAN 2B
- Modbus TCP: Significant less PLC load from Modbus TCP client and new client POU EthModMast2 with connection parameters for each connection.
- Ethernet: New POU DNS resolve in Ethernet library
- KNX: Usability and stability improvements

#### Modbus TCP – Communication Interface Modules (CI52x-MODTCP)

- Firmware update functionality of Modbus TCP devices (CI52x) is now available via IP configuration tool, which can be installed via Additional Tools within the Automation Builder installer.

#### Drive composer pro

- New Drive composer pro version 2.3.1 integrated in Automation Builder 2.2.1

#### Panel Builder

- Panel Builder software is included into the Automation Builder version profiles, starting with Automaton Builder 2.1. When installing Automation Builder 2.2 including version profile 2.1 it will install Panel Builder 2.8 and 2.6 and automatically use the right version when launching from an Automation Builder project.

### General information

- **Standard and Premium license of Automation Builder 1.x will not be valid for Automation Builder 2.x For Automation Builder 2.x standard and premium features appropriate licenses need to be purchased and activated.** Please check the upgrade licenses possibilities with your ABB sales representative. For details please refer to Automation Builder lifecycle documentation in ABB Library or contact your sales representative.
- The installation of the ABB Automation Builder software requires administrator rights.
- Prior to installation, the Automation Builder, Control Builder Plus, CODESYS software and the CODESYS Gateway Server must be shut down.
- Automation Builder 2.2 installation completely replaces installed versions of Automation Builder prior to 2.2.0 / Control Builder Plus. Side-by-side installation of Automation Builder and Control Builder Plus is not supported, but also not required. Projects created with previous versions can be upgraded to the latest version easily. If upgrading is not desired, projects can be opened in one of the integrated version profiles.
- Automation Builder 2.2 creates a new device repository. Devices which had been installed additionally in previous versions of Automation Builder/Control Builder Plus can be migrated via menu "Tools" → "Migrate third party devices".
- The English documentation contains the latest changes for Automation Builder 2.2. Latest documentation packages can be found on the ABB website: [www.abb.com/plc](http://www.abb.com/plc) → Download Documentation, and then select your language.
- Automation Builder 2.2 includes CODESYS version 3.5 and 2.3. Side-by-side installations of other CODESYS version 2.3 based engineering tools like AC1131 may cause issues or disturb the use of one or both tools. If side-by-side installation cannot be avoided, please install all other tools BEFORE installing Automation Builder.
- Windows Server 2012 installation: CoDeSys V2.3 Gateway Service Wrapper or server restart required after installation. For concurrent Gateway access a specific configuration is required, please refer to Automation Builder help for details

- When installing CP600 control panel option including previous version profiles, the Panel Builder installer asks for replacing the last installed version of Panel Builder. This question has to be answered with "no". In case of accidentally choosing "yes", the installer has to be executed again, although it has been finished successfully.
- Please create project archives (File -> Project Archive -> Save/Send Archive...) to support smooth project upgrade to latest Automation Builder version before installing latest version
- After upgrading projects to latest Automation Builder, please check for having the matching firmware installed before doing a download.
- Availability of online activation of licenses might be affected by local IT security settings. In case the online activation of licenses is failing please use the offline activation.

## System Requirements

- 1 gigahertz (GHz) or faster 32-bit (x86) or 64-bit (x64) processor
  - 4 GB RAM
  - 5-18 GB free available hard disk space depending on the selected feature set
  - SVGA graphics adaptor 256 colors, resolution of 1024x768 pixels
  - Supported operating systems:
    - Windows 7 (32/64 Bit) Professional / Enterprise / Ultimate (SP1 required)
    - Windows 10 (32/64 Bit) Professional / Enterprise
    - Windows 8.1 (32/64 Bit) (requires .Net Framework version 4.6.2 installed prior to Automation Builder installation)
    - Windows Server 2012 R2 64 bit (all devices have to be directly accessible by the server; requires enabled .Net Framework 3.5, refer to section below for installation details)
- Note: Windows XP and Windows VISTA are no longer supported.

## Table of contents

## Changes in Automation Builder 2.2.2

The release includes the following device groups:

### Automation Builder

<i>Functional changes / New features</i>	<i>Version</i>
Licensing: <ul style="list-style-type: none"> <li>License selection (local or from server) can be configured via Automation Builder (Tools -&gt; Options -&gt; Startup settings). By default, any available license is taken.</li> <li>Licenses purchased 2019 or after allow more than 4 licenses to be activated in one license container</li> </ul>	2.2.0
Modularized Automation Builder installation structure reduces the download size and the installation time in case no or only few compatibly versions are selected during installation	2.2.0
Virtual System Testing: <ul style="list-style-type: none"> <li>Virtual Drive ACS880 is now supported (available as standalone software). Please contact Global Drives Support (global.drivesupport@fi.abb.com or +358 50 33 27200) for further information.</li> <li>The technology previews of virtual Drives ACS380 and ACS580 are discontinued due to availability of Virtual Drive ACS880 support.</li> </ul>	2.2.0
Automatic update of release notes in Automation Builder setup and tool with latest available version from internet	2.2.0
Integration of 3S Automation Platform SP13 Patch 1	2.2.0
Troubleshooting is eased by an integrated Automation Builder functionality to collect all available data and zip it for exchange with support line	2.2.1

<i>Fixed issues</i>	<i>ID</i>
Improved Automation Builder installer robustness	AB-12497
Script objects are lost after project update	AB-15100
PLC runtime licensing: "Return license" does not work for licenses installed via SD Card Return license works properly when Automation Builder is connected to the PLC	AB-14019

<i>Known problems</i>	<i>ID</i>
Licensing: Number of standard or premium licenses that are purchased 2018 and earlier that can be activated in one license container is limited to 4 Workaround: use license dongle if more licenses are required or contact Automation Builder support to update the licenses (refer to new features)	n.a.
Installation issue on Windows 10: During installation there might be issues with automatically deleted files by Windows in temporary folders which are required for installation. This automatic temporary file deletion is introduced with Windows 10 feature update (build 17720 and later).  Workaround: if you run into installation issues on Windows 10 please try to disable "Storage Sense": Windows -> Open Settings -> Click on System -> Click on Storage -> Turn off the Storage sense toggle switch	AB-15979
During uninstall all of Automation Builder the Virtual Drives uninstallation might fail Workaround: Please uninstall Virtual Drives via Windows Control Panel -> Programs and Features	n.a.
GSDML: The character "/" used inside a module name of a GSDML file is not supported by Automation Builder. An error message is shown during installation to Device Repository. Workaround: Remove corresponding characters in module name of GSDML file.	AB-13924
Projects created in Control Builder Plus software versions cannot be upgraded automatically to Automation Builder version 2.1.X. Workaround: <ul style="list-style-type: none"> <li>open project with profile "Automation Builder 1.2", perform upgrade, save project</li> <li>open project with latest profile "Automation Builder 2.0", perform upgrade, use project</li> </ul>	n.a.
ABB I/O mapping list view for disconnected modules on PROFINET IO devices with Shared Device functionality like AC500 CM589-PNIO-4 (-XC) or 3 <sup>rd</sup> party PROFINET IO devices (drives, I/O modules, encoders, etc.) is temporarily not supported. As a result, no I/O mapping information is shown for disconnected modules on CM589-PNIO-4 (-XC) or 3 <sup>rd</sup> party PROFINET IO devices with Shared Device functionality in Automation Builder. Workaround: <ul style="list-style-type: none"> <li>use standard I/O Mapping for disconnected modules on CM589-PNIO-4 (-XC) or 3<sup>rd</sup> party PROFINET IO devices with Shared Device functionality</li> </ul>	2.0.3
Automation Builder installation: In case a PC reboot is required/executed during Automation Builder installation the setup might have to be restarted manually after PC restart. Workaround: Please start the setup after restart and select the desired options to install. The setup will then continue the installation where it has been interrupted for reboot	n.a.

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

### PLC - AC500 V2 Processor Modules (PM5xy)

<b>Functional changes / New features</b>	<b>Version</b>
Ethernet: MQTT: support IoT communication protocol MQTT (IEC and C-Code library)	2.8.0
I/O-Bus: I/O-Bus: HotSwap functionality for PM585-ETH, PM59x-ETH, PM595-4ETH Note: Hotswap functionality cannot be used together with S500-S Safety IO modules	2.8.0
Virtual AC500 V2 supports now also definitions of % HW addresses	2.8.0
<b>Fixed issues</b>	<b>ID</b>
CANopen/CAN configuration of CM598-CN: Configuration error when parameter "Heartbeat producer time" (ID: 0x01017000) does not exists	CPUFW-6088
AC500 configuration of shared device functionality with a TR-Electronic encoder doesn't work in Automation Builder 2.1.2	AB-15086
<b>Known problems</b>	<b>ID</b>
Web Visualization: Java Applet might be blocked by your web browser The Java Applet that provides the AC500 web visualization, created in Automation Builder V2.0.4 or lower includes an intermediate certificate that expired on Saturday April 13th 2019. After this date the validation procedure for the certificate might fail as it cannot be validated via the "OCSD" procedure. Depending on your browser and whether your computer is connected to the Internet, the Applet will be blocked after that date.  Workaround: The workaround steps are described in detail in the following application note: <a href="http://search.abb.com/library/Download.aspx?DocumentID=3ADR010388&amp;LanguageCode=en&amp;DocumentPartId=&amp;Action=Launch">http://search.abb.com/library/Download.aspx?DocumentID=3ADR010388&amp;LanguageCode=en&amp;DocumentPartId=&amp;Action=Launch</a>	AB-16179
Online access: Additional Visu Files at PLC without Onboard Ethernet leads to error during download Workaround: Don't use Additional Visu files in PLCs without Onboard Ethernet	CPUFW-6929
C-Code: PLC crashes on download program running C-Code-lib build with newer revision of FWAPI, e.g. Bacnet library created with AB 2.2.0 (FWAPI 2.8.x) used with PLC firmware V2.7.2. Workaround: Update PLC firmware to same version as FWAPI in C-code lib, e.g. PLC firmware V2.8.1	CPUFW-6916
Online access: Connecting a CP600 Panel via CODESYS protocol serial avoid creating a boot project Workaround: Disconnect panel during creating of boot project	CPUFW-6885
Working on Codesys 2.3 projects with administrator and non-administrator users might lead to inconsistent data Workaround: avoid working in this setup with administrator and non-administrator users	n.a.
Activating the CANopen sync mode requires to activate the "generic configuration view" (see "Tools->Options->Device editor")	AB-9768
EtherCAT: Usage of the SyncUnits feature with enabled AutoConfiguration for AC500 V2/V3 EtherCAT might result in compilation errors as some ENI file data gets not correctly generated.  Workaround: in case you are running into such errors please contact Automation Builder support team	AB-15520
Using GSDML files with sub-modules for PROFINET Shared Device is not working. AC500 PLC stops with wrong configuration data. Workaround: not available	AB-13836
CM574-RS: If the parameter "Enable debug" is set to "Off" and when the PLC stops the CM574-RS continues to run causing an E2 failure. Workaround: Set the parameter "Enable debug" to "On".	CPUFW-5538
When PM5xx-ETH with 4 x CM597-ETH connected on the switch, the IP-Configuration tool show a wrong "Configured IP Address" for PM5xx-ETH. When unplugging the cable from all CM597-ETH, the "Configured IP address" shows the right value." Workaround: Unplug the CM597-ETH from the switch to check the IP address from PM5xx-ETH.	CPUFW-5537
System: DC541: Error message after firmware update also in case of correct update Workaround:	CPUFW-4659

Check FW version of DC541 after update	
System: DWORD_TO_LREAL and UDINT_TO_LREAL: DWORD/UDINT value cannot be proper converted to LREAL if DWORD/UDINT >16#80000000. For PM595-4ETH CODESYS compiler generates warning. Workaround: Add new function: FUNCTION DWORD_TO_LREAL_NEW : LREAL VAR_INPUT x: DWORD; END_VAR VAR b: LREAL; END_VAR b := DWORD_TO_LREAL(x); IF b < 0.0 THEN b := 4294967296.0 + b; END_IF; DWORD_TO_LREAL_ABB := b; call function DWORD_TO_LREAL_NEW instead of DWORD_TO_LREAL in user program: PROGRAM PLC_PRG VAR a: DWORD; b: LREAL; END_VAR b := DWORD_TO_LREAL_ABB(a);	CPUFW-3741
POU: PM595-4ETH, LED_SET is without function in Mode=0. The POU is intended to control the additional LED's. Workaround: Use POU LED_SET to control the additional LED's.	CPUFW-3721
System: Firmware download to CM574-RS can lead to watchdog error of CM574-RS in case of using freewheeling task in CM574-RS Workaround: Don't use freewheeling task in CM574-RS	CPUFW-3675
Some Online Services lead to log out on PM595-4ETH Workaround: None	CPUFW-3465
Socket opened by IEC application via SysLibSock is not closed on PLC Reset Workaround: None	CPUFW-3443
"Run time of FB DEL_APPL is increased for about 6s. This is caused by increasing the time for delete flash." Workaround: None	CPUFW-3087
SysLibFile library: As of V2.3.x, dtLastAccess.time is always 00:00 on call of SysFileGetTime() Workaround: None	CPUFW-2833
CS31-Bus: In case of connection of AC31 modules like 07AC91, 07AI91, DC91 to CS31-Bus of COM1 and/or COM2 of CM574-RS, PM5xx-eCo, PM57x or PM58x a lot of bus errors occurs. Sometime this modules disconnects and reconnects. S500 modules don't show such effects. Workaround: Don't use this datatypes in webvisu	CPUFW-1833
WEB server: ActiveX-Element display incorrectly Workaround: Don't use Active-X element in webvisu	CPUFW-1593
WEB server: Alarm tables do not work on webvisu, if "All alarm groups" is selected. Messages are not displayed properly. Workaround: Don't select "All alarm groups"	CPUFW-1506
Telecontrol: (IEC60870-5-104) connection does not function properly after a long cable break Workaround: Restart PLC after long cable break	CPUFW-1433
WEB server: In WMF-file integrated text isn't displayed in visualization Workaround: Don't use WMF-file with integrated text	CPUFW-1310
WEB server: The following datatypes are wrongly displayed in the webbrowser with the mentioned formatting strings: byte with %i and %u, in both cases only the format letter (i or u) is displayed without the % sint with %s shows the two's complement when negative values should be displayed uint with %d shows a -1 if the maximum possible value of this datatype should be displayed uint with %i and %u, in both cases only the format letter (i or u) is displayed without the % dint with %i, only the format letter (i) is displayed without the % lreal with %2.9f shows the infinity sign if the maximum/minimum value of this datatype should be displayed uint with %s shows a -1 if the maximum possible value of this datatype should be displayed real and lreal with %s shows 0.0 if the minimum possible value of this datatype should be displayed lreal with %s shows the word infinity if the maximum possible value of this datatype should be displayed char with %c, only the format letter (c) is displayed without the % instead of a single letter Workaround: Don't use this datatypes in webvisu	CPUFW-1304
Online: Display of the task priority shown not the correct value for interrupt task -> It is not the shown value of the	CPUFW-1072

boot project! Workaround: No workaround. Interrupt task: Shown priority is the internal operating system priority	
WEB server: option "Best fit in online mode" doesn't work properly Workaround: WEB server: Option "Best fit in only mode" is not recommended for web visualization.	CPUFW-921
SD card write protection function is not available for AC500-eCo CPUs Workaround: SD-card write protection is not evaluated by AC500 CPUs. Write protected cards can be overwritten. Protect the SD card by yourself.	CPUFW-748 ECOHW-11

## PLC - AC500 V3 Processor Modules (PM5xyz)

### Important Notes:

- For AC500 V3 CPUs, the diagnostic handling is different from the AC500 V2 CPUs.

<b>Functional changes / New features</b>	<b>Version</b>
System Much faster access to RETAIN/PERSISTENT and addressed (%M area) variables	3.2.2
Ethernet extended diagnosis Additional PLC shell commands: ethernet desc - get the current ethernet interface settings ethernet netstat - get list of used sockets "	3.2.2
Ethernet New POU DNS resolve in Ethernet library	3.2.2
Modbus TCP Significant less PLC load from Modbus TCP client.	3.2.2
Modbus TCP New client POU EthModMast2 with connection parameters for each connection.	3.2.2
CAN Support of CM598-CN, limited to protocols CAN 2A and CAN 2B	3.2.2
KNX Usability and stability improvements	3.2.2
OPC UA server enhancements - User management - Definition of (client specific) symbol configurations - Alarms and conditions (Events part)	3.2.0
Protocol IEC61850 (MMS server, GOOSE) Updated library 4.0.4.0 release with TÜV certificate	3.2.0
KNX Add KNX button and LED setting via AC500 Display	3.2.0
SD-Card FW update with compatibility check (needs Update FW 3.2.0.x)	3.2.0
Display FW 4.1 with - rework configuration menu <CFG> - rework display value menu <VAL> - add diagnosis menu <DIAG> - add KNX button, LED	3.2.0
I/O-Bus Local I/O HotSwap functionality added	3.2.0
Buffered data, PlcShell commands for RETAIN/PERSISTENT: - getsramlayout - Display layout of complete RETAIN/PERSISTENT. - clearsram - Init and mark SRAM segment or complete RETAIN/PERSISTENT as free. - savesram - save complete RETAIN/PERSISTENT content to file. - Restore complete RETAIN/PERSISTENT content from file	3.2.0
Ethernet interface Independant Gateway configuration for ETH1/ETH2 Ethernet interfaces	3.2.0
MQTT Implementation of IoT communication protocol MQTT	3.2.0
New Diagnosis concept and system (1st step) - CPU errors Battery, Flashdisk - I/O-Bus and S500 errors - auto control of ERR LED	3.2.0
PROFINET Introduction of new driver for CM579-PNIO (with limited diagnosis capabilities)	3.2.0
EtherCAT Enhanced commissioning diagnosis – Manual control of bus states via Automation Builder	3.2.0
System	3.2.0

Integration of CODESYScontrol V3.5 SP13 P0	
Technology Preview: C-Code support for AC500 V3 PLCs is just enabled for PM5650	3.2.0
Protocol KNX - licensed per PLC – PS5604-KNX runtime license	3.1.4/3.2.0

Fixed issues	ID																																						
KNX: No information is shown regarding required/missing runtime license for KNX protocol.	CPU_FWLIB-252																																						
UpdateFW: PLC with SystemFW 3.2.2.58 and UpdateFW 3.2.0.188 -update of only UpdateFW to version 3.2.1.43 cause stay of PLC in state "update".	CPUFW-6972																																						
MQTT: Mqtt POUs with file need full path instead of relative path	CPUFW-6768																																						
KNX: If the CPU reboots or the application restarts, the first changed output value of the group addresses is immediately sent to the KNX. The last sent value of the first sent group address is not matching the value out of the PLC application (if value is not equal to default/initial value) and is not sent again after the first calculation. In this case the calculated value in the PLC differs to the last sent value on the KNX bus. After calculation of the value, the changed value is not sent again to the KNX bus.	CPUFW-6747																																						
KNX: ABB_IoDrvKNX_AC500.library - the following KNX DPT are transferred in Motorola byte order to IEC data type ARRAY[] OF BYTE: <table><tr><td>-</td><td>Channel Group object name</td><td>IEC data type</td><td>DPT</td></tr><tr><td>-</td><td colspan="3">-----</td></tr><tr><td>-</td><td>35</td><td>iTime</td><td>ARRAY[0..2] OF BYTE</td><td>10.*</td></tr><tr><td>-</td><td>36</td><td>qTime</td><td>ARRAY[0..2] OF BYTE</td><td>10.*</td></tr><tr><td>-</td><td>45</td><td>iString</td><td>ARRAY[0..13] OF BYTE</td><td>16.*</td></tr><tr><td>-</td><td>46</td><td>qString</td><td>ARRAY[0..13] OF BYTE</td><td>16.*</td></tr><tr><td>-</td><td>51</td><td>iDateTime</td><td>ARRAY[0..7] OF BYTE</td><td>19.*</td></tr><tr><td>-</td><td>52</td><td>qDateTime</td><td>ARRAY[0..7] OF BYTE</td><td>19.*</td></tr></table>	-	Channel Group object name	IEC data type	DPT	-	-----			-	35	iTime	ARRAY[0..2] OF BYTE	10.*	-	36	qTime	ARRAY[0..2] OF BYTE	10.*	-	45	iString	ARRAY[0..13] OF BYTE	16.*	-	46	qString	ARRAY[0..13] OF BYTE	16.*	-	51	iDateTime	ARRAY[0..7] OF BYTE	19.*	-	52	qDateTime	ARRAY[0..7] OF BYTE	19.*	LIB-1716/ CPU_FWLIB-90/ AB-14564/ IoDrvKNX 3.5.13.7
-	Channel Group object name	IEC data type	DPT																																				
-	-----																																						
-	35	iTime	ARRAY[0..2] OF BYTE	10.*																																			
-	36	qTime	ARRAY[0..2] OF BYTE	10.*																																			
-	45	iString	ARRAY[0..13] OF BYTE	16.*																																			
-	46	qString	ARRAY[0..13] OF BYTE	16.*																																			
-	51	iDateTime	ARRAY[0..7] OF BYTE	19.*																																			
-	52	qDateTime	ARRAY[0..7] OF BYTE	19.*																																			
IoDrvKNX: some data types (Time, DateTime, String, Color) are transferred in IEC data type ARREY and in Motorola byte order → Convert functions are available (except for “Color”) for the specific datatypes	CPU_FWLIB-90/ LIB-1716																																						
KNX: ABB_IoDrvKNX_AC500.library - the following KNX DPT are transferred in Motorola byte order to IEC data type ARRAY[] OF BYTE: <table><tr><td>-</td><td>Channel Group object name</td><td>IEC data type</td><td>DPT</td></tr><tr><td>-</td><td colspan="3">-----</td></tr><tr><td>-</td><td>55</td><td>iColor</td><td>ARRAY[0..2] OF BYTE</td><td>232.*</td></tr><tr><td>-</td><td>56</td><td>qColor</td><td>ARRAY[0..2] OF BYTE</td><td>232.*</td></tr></table>	-	Channel Group object name	IEC data type	DPT	-	-----			-	55	iColor	ARRAY[0..2] OF BYTE	232.*	-	56	qColor	ARRAY[0..2] OF BYTE	232.*	CPU_FWLIB-204																				
-	Channel Group object name	IEC data type	DPT																																				
-	-----																																						
-	55	iColor	ARRAY[0..2] OF BYTE	232.*																																			
-	56	qColor	ARRAY[0..2] OF BYTE	232.*																																			
Fix: Color information is shown in the IO mapping description within Automation Builder																																							
Ethernet FTP server: When PLC with configured FTP server is starting up from bootproject and power is lost at the right moment, it might get into a state where it will no longer enter RUN ever again. In the PLC log there will be a message "chpasswd failed" and the only remediation is a FW update (even to the same version)	CPUFW-6600																																						
Ethernet WEB server: HTTPS is not supported for PLC FW 3.1.x in combination with Chrome Internet Browser version > V60.	CPUFW-6286																																						
Licensing: The functionality Remote Target Visu and IEC61850 do not follow the standard demo licensing period. If used without license the functionality stops after 30 minutes. In this case the PLC remains in status running but will stop when the standard demo period is expired.	CPUFW-5961																																						
SD-Card: Update with write protected sdcard results in an endless loop for the update process.	CPUFW-5917																																						
IEC 61850: GOOSE subscribe does not work	CPUFW-5902																																						
Ethernet: The PLC doesn't apply the changes in IP tool ("Configured IP Address") and Display before re-boot.	CPUFW-5896																																						
Ethernet: Sometimes Online access with 3S block driver TcpIp cannot be established.	CPUFW-5884																																						
System: SysTaskSuspend blocks for 50ms.	CPUFW-5881																																						
Network Variables (NV): Does not work with default Broadcast address 255.255.255.255.	CPUFW-5803 AB 2.2.0																																						
CAA-File: After creating and then deleting a big file which filled all available memory space on the disk (sdcard or userdisk), the DISK_STATUS fb always shows that there is no space left. It is also impossible to perform other file/directory actions, e.g.: creating a new directory.	CPUFW-5746																																						
System:	CPUFW-5560																																						

In case of time jumps might have undesired behavior in the system.	
There might be variable naming conflicts when using IEC60870 and AC500 V3 diagnosis with enabled PLC setting 'diagnosis for devices'. This issue is resolved by using a dedicated namespace for IEC60870. Corresponding warnings are shown in the message window.	AB-15081

<b>Known problems</b>	<b>ID</b>
FW 3.2.0: Downgrade of AC500 PLCs from firmware 3.2.x version to previous versions via Automation Builder 2.1.X is not supported. Workaround: Please prepare SD-card with desired firmware versions and execute firmware version update via SD-card	n.a.
PM5630: There might be not sufficient memory for boot projects when visualizations are used or had been used and downloaded before.  Workaround: In case you are running into memory issues please check that visu files which are no longer required are deleted using the "Files" tab in the editor of the main CPU node (delete the files in 'PlcLogic/visu/').	AB-15729
The "Scan for devices" functionality does not work when the "Log" Editor of the V3 PLC is opened, After the call of "Scan for devices" it is also no longer possible to add any object in the device tree (as long as the "Log" Editor is active).  Workaround: select another editor tab and call "Scan for devices" again	AB-15749
PROFINET and CM589-PNIO: As of 2nd download coupler does not work, 1st DL and bootproject are ok. Workaround: Start project as bootproject.	CPUFW-6641
System: IEC task watchdog followed by Online -> Reset warm leads to crash of PLC. Workaround: Open	CPUFW-6142
CM579-ETHCAT: In some configurations, the state of the last EtherCAT slave is shown as red circle in AB device tree, even if slave works fine. Workaround: Ignore wrong state and/or check state with POU.	CPUFW-6134
Using generated device diagnosis code and IEC60870 in parallel is currently not supported. If you use IEC60870 please do not activate the feature 'Enable Diagnosis for devices' via 'PLC Settings' tab of the PLC node. Inconsistent code would be generated resulting in compile errors.	AB-15075
Deleting of an AC500 V3 PLC in the tree might fail if there is an invalid AlarmConfiguration task configured. An error message "Invalid object guid..." might be displayed and the PLC cannot be removed.  Workaround: Delete AlarmManagerTask below task configuration and delete then the PLC node.	AB-15554
EtherCAT: Usage of the SyncUnits feature with enabled AutoConfiguration for AC500 V2/V3 EtherCAT might result in compilation errors as some ENI file data gets not correctly generated.  Workaround: in case you are running into such errors please contact Automation Builder support team	AB-15520
Runtime licensing: Return license feature of runtime license is working on AC500 firmware versions 3.1.3 and higher. Please update AC500 firmware first to this version and then return licenses. Otherwise runtime licensing on this PLC will become unusable!	FW 3.1.0
Projects created with AC500 V3 PLCs in Automation Builder 2.0 require to manually exchange the following libraries: AC500_ExtUtils -> AC500_PM AC500_IntUtils -> AC500_Io, AC500_PM AC500_EthernetUtils -> AC500_Ethernet The V3.1 library "AC500_Ethernet" contains all Function blocks from the V3.0 library "AC500_EthernetUtils" The V3.1 library "AC500_Io" contains Function blocks from the V3.0 library "AC500_IntUtils" The V3.1 library "AC500_Pm" contains Function blocks from the V3.0 library "AC500_IntUtils" and "AC500_ExtUtils"	LIB-1424 LIB-1421 LIB-1419
Projects for AC500 V3 PLCs created with Automation Builder 2.0 need manual update if CM modules had been used as slot numbering is changed now in Automation Builder 2.1. If POU's with a "slot" parameter are used, the slot needs to be adapted to the physical CM position (from 1 to 6) on the terminal base. If EtherCAT is used in "synchronous mode", the event tasks need to be changed (e.g. "EventTask1" for the first slot, "EventTask3" for the third slot).	AB-12531
System: PLCShell command "date" and "rtc-set" cannot set a date after 2038 Workaround: Open	CPUFW-5870
Ethernet: FTP server: FTP server: If FTP server is configured on booth Ethernet interfaces ETH1 and ETH2, FTP server will be activated on ETH1 with configuration of ETH1. The FTP server configuration of ETH2 will be ignored. Workaround: Configure FTP server only on one Ethernet interface ETH1 OR ETH2.	CPUFW-5869
Network Variables (NV): does not work with default Broadcast address 255.255.255.255 Workaround: Use other Broadcast address as 255.255.255.255, e.g. 192.168.0.0	CPUFW-5803

TLS/SSL self-signed certificates can't have an End-date after 2038. Workaround: None, Open	CPUFW-5765
Modbus TCP server: fast On/Off switching of server can lead to incomplete log entries (e.g. missing IP address) Workaround: None, Open	CPUFW-5763
CAA-File: If the userdisk is full, the PLC won't create the INI file with production data on the SD card. Workaround: - Don't fill userdisk to 100% (proposed space is 10%). - Login via PLC Shell and remove files from the userdisk manually.	CPUFW-5734
Diagnosis: In AC500 V3 CPU, the system diagnostic should be done using function blocks in user program or with Automation Builder using online diagnostic and Device Tree. The CPU ERR Led doesn't indicate the errors. Workaround: - Use Automation Builder or User program for diagnosis. - New POU SetLEDErr in IntUtils library in 3.0.2.	CPUFW-5221 CPUFW-5259
SD-Card: In some cases, If the SD card is removed while in PLC is in RUN mode and SD card is accessed and is put back, the PLC don't recognize that the SD Card is put back. If you try to write on a File on the SD Card there is Error NOT_EXIST but the file is there. Workaround: - Do not to remove the SD card while actively accessing it. Note: On display activity of SD card is shown as long as a file is open on it.	CPUFW-5099
Modbus TCP: It's not possible to use multiple connections to one server with Modbus TCP. Workaround: use only one connection per Modbus TCP server.	CPUFW-5076
LIB: CommFB POU: GETIO_PART/SETIO_PART do not work. Status code 16#40820000 will be returned. As of V3.1.0 error code "NOT_IMPLEMENTED" will be returned. Workaround: Do not use the POU	CPUFW-4927
If the SD card is removed during a read / write process, the SD card won't remounted from the PLC after replug. POU FileClose does not output a Done or Error and remains in Busy status. Workaround: Do not remove the SD card during read/write process.	CPUFW-4684
Modbus TCP: POU ETHx_MOD_MAST and EthxModMast with wrong input data length for FCT=22, 23 leads to access violation Workaround: Check the input parameters for valid values	LIB-1615 CPU_FWL1B-104
Modbus TCP: POU ETHx_MOD_MAST with wrong input parameters leads to exception: ADDR := 16#FFFF, NB := 0 Workaround: Check the input parameters for valid values	LIB-1559 CPUFW-6154
CAA_File: FILE.close: exception in case file handle is zero. POU stays forever in state busy. Workaround: Check file handle before call FILE.close. (Must be >0)	LIB-1532 CPUFW-5060
Function Code 7 for Modbus TCP not working. Workaround: FCT=7 cannot be used until issue is fixed.	LIB-1192 CPU_FWL1B-118
Function code 23 for ETHx_MOD_TCP has different max data length (write 121, read 125) then V2 (write 125, read 125). The values in V3 are according to Modbus specification. Workaround: Use data length according to Modbus specification.	LIB-1167LIB-1167 CPU_FWL1B-125
CAA-File: The maximum number of files opened at the same time is limited to 1024. The runtime system already opened some files. So the limit for the CAA file applications is less 1024, e.g. 1007. Workaround: Consider this limitation for CAA file application.	AB-13406 LIB-1183 CPU_FWL1B-94
CAA-File: "The files to be accessed from IEC (user) applications go to directories that are not visible for the user (e.g. /mytemp). The PLC takes the filename specified by the user and appends it to this lecFilePath, and this complete name has a length <= 255. So the maximum length of a file name for the CAAFile user is 255 minus the length of the lec Path." Workaround: Consider the lec Path in the lecFilePath.	AB-13406 LIB-1176 CPU_FWL1B-9
Modbus TCP: Function code 23 for ETHx_MOD_TCP has different max data length (write 121, read 125) then V2 (write 125, read 125). The values in V3 are according to Modbus specification. Workaround: use NOT_EXIST for both use cases	LIB-1167 CPU_FWL1B-125
CAA-File: POU FileOpen doesn't distinguish if the SD card is write-protected or if there is no sd card inserted (in both cases the error message is NOT_EXIST). Workaround:	LIB-1140 CPU_FWL1B-19

use NOT_EXIST for both use cases	
OPC UA server: Property MaxMonitorItemsPerCall has been reduced to 100. If this property is read by OPC UA clients, it returns no value (null)	n.a.

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

## Safety PLC - AC500-S

**Note:** Before using the functional safety configuration and programming tools contained in Automation Builder, you must have read and understood the AC500-S Safety PLC User Manual (see <http://www.abb.com/PLC>). Only qualified personnel are allowed to work with AC500-S safety PLCs.

Compiling and executing functional safety projects on SM560-S Safety CPUs require the purchase of a license.

<b>Functional changes / New features</b>	<b>Version</b>
SM560-S-FD-1 (-XC) and SM560-S-FD-4 (-XC) are supported. - New safety library SafetyDeviceExt_LV100_PROFIsafe_AC500_V27.lib is introduced to support PROFIsafe F-Device functionality on SM560-S-FD-1 (-XC) and SM560-S-FD-4 (-XC) safety CPUs.  New safety library SafetyExt2_LV100_AC500_V27.lib is introduced to support new functions like reading safety boot project CRC and triggering SAFE STOP from safety application program on all AC500-S safety CPUs with firmware V2.0.0.  Updated PROFIsafe F-Host library SafetyBase_PROFIsafe_LV200_AC500_V22.lib is available. It is needed to support supplementary functions on SM560-S-FD-1 (-XC) and SM560-S-FD-4 (-XC). This library shall be used in all new AC500-S safety projects.	2.1.0
A new licensing mechanism common with existing Automation Builder products is used now for AC500-S functional safety engineering. It means that PS501-S license enabling package is replaced by DM220-FSE and DM221-FSE-NW Automation Builder 2.0.2 add-ons. All customers who have already valid PS501-S license keys can upgrade free-of-charge their licenses to new ones (DM220-FSE and/or DM221-FSE-NW). All users of Automation Builder 2.0.2 who start their safety programming in Automation Builder 2.0.2 profile will have to obtain DM220-FSE and/or DM221-FSE-NW Automation Builder add-ons to do AC500-S functional safety engineering.	2.0.2
A new version of GSDML importer is used in Automation Builder 2.0.2. This new version of GSDML importer is not compatible with the previous version due to the change in the data description. This was needed to be able to implement more restrictive style checks according to GSDML style rules. Special steps are now needed to migrate projects with 3 <sup>rd</sup> party safety modules instantiated using GSDML files in old profiles to Automation Builder 2.0. These steps are described in Application Note 3ADR025275M0201 in detail.	2.0.2

## Modbus TCP – Communication Interface Modules (CI52x-MODTCP)

<b>Functional changes / New features</b>	<b>Version</b>
Firmware update functionality of Modbus TCP devices (CI52x) is now available via IP configuration tool, which can be installed via Additional Tools within the Automation Builder installer. Latest firmware files are available from the ABB Library. Firmware version of CI52x devices can be scanned and updated (incl. bulk update of several devices).	2.2.1
Diagnosis: Detailed diagnosis of Modbus TCP Communication Interface modules directly connected to the Automation Builder available. This also indicates if there are not hot swap enabled I/O devices are plugged into hot swap enabled terminal units.	2.2.0
<b>Known problems</b>	<b>ID</b>

Diagnosis only works with CI52x-MODTCP firmware version 3.2.7 and higher.	n.a.
---	------

## Drive Manager

<i>Functional changes / New features</i>	<i>Version</i>
General: New firmware support ACS880 – AINFX 2.82.0.0	2.2.0
Import/Export of firmware's to/from DriveManager is redesigned, user friendly and available under Tools -> DriveManager Upgrade menu item.	2.2.0
ACS880 Virtual drive supported for Virtual Commissioning	2.2.0
Added ACS480 drive support	2.2.0
Added DCS880 drive support	2.2.0
German language support added for dynamically populated parameters Instead of displaying firmware names, now loading package names are displayed in firmware list for Crane application firmware's under ACS880 drive	2.2.0

<i>Bug corrections</i>	<i>ID</i>
Firmware mismatch warning is not displayed when DriveManager is connected to ACS880 drive which has same firmware version available in both Crane application and primary control firmware's.	AB-14664
Invalid process data selection shown in Process data tab in DriveManager for ACS550 under Profinet.	AB-14654
Automation Builder crashed when user try to connect to drive using DriveManager while virtual simulation is in progress.	AB-14125

<i>Known problems</i>	<i>ID</i>
No synchronization between Process data tab and Drive Manager's FBA data in & data out parameter group with 32-bit parameters.  Workaround: While configuring offline data in FBA data in & data out in drive manager if 32-bit parameter is selected then leave next parameter as empty	AB-7586
Drive manager loose connection to drive if, user is using Profinet / Profibus DPV1 read/write function blocks in PLC program to read/write parameters of the drive.	AB-8376

## Drive Application Programming

Drive application programming is only supported until Automation Builder 2.1. Please install the corresponding version profile, if you want to continue using Automation Builder for drive application programming.  
Further information about latest engineering tools for drive application programming are available from Global Drives Support (global.drivesupport@fi.abb.com or +358 50 33 27200).

## Drive Composer

Drive composer pro is compatible with all new common architecture drives such as ACS880. The complete compatibility table is available in Software Tools web page <http://new.abb.com/drives/software-tools/>

<i>Functional changes / New features</i>	<i>Version</i>
New Drive composer pro version 2.3.1 integrated in Automation Builder 2.2.1	2.3.1.150

## Solutions

### Condition Monitoring System

<i>Functional changes / New features</i>	<i>Version</i>
Only internal changes on platform integration, no functional changes.	2.8.0

### SCADA - Zenon

<i>Functional changes / New features</i>	<i>Version</i>
Integration in Automation Builder supports latest zenon version 8.00 (installable with separate zenon setup)	8.00
Limitation: Zenon AC500 V3 variable synchronization is currently not supported	2.2.0

## Panel Builder

<i>Functional changes / New features</i>	<i>Version</i>
Panel Builder software is included into the Automation Builder version profiles, starting with Automaton Builder 2.1. When installing Automation Builder 2.2 including version profile 2.1 it will install Panel Builder 2.8 and 2.6 and automatically use the right version when launching from an Automation Builder project.	2.2.1
<b>PB610 Panel Builder 600:</b> Actions and events <ul style="list-style-type: none"> <li>Extend gesture area widget with possibility to execute one shot actions on new events Feature</li> <li>Enable ftp client actions in Scheduler and Alarms</li> <li>Extend gesture area: Passthrough</li> </ul> Alarms <ul style="list-style-type: none"> <li>Background color for alarm widgets</li> <li>Table Alarm widget optimization</li> </ul> Audit trail <ul style="list-style-type: none"> <li>Create AuditTrail display widget - Case ID: 201202158</li> <li>Events to log inside the Audit Trail</li> <li>New format of events buffer dump (SaveArchive)</li> <li>Action to log a message into the Audit Trail</li> <li>Ensure the authenticity of reports generate from HMI</li> <li>Audit Trail with date and time on separate columns</li> </ul> Deployment and run time operation <ul style="list-style-type: none"> <li>Provide backspace functionality for numeric keypad</li> <li>Enable Check box button in Scheduler and Alarm widget is too small</li> <li>Improve Studio boot time</li> <li>OPC UA Server: Server expose tags grouped with name (prot1, prot2)</li> <li>Global property to disable multi-touch gestures in a project</li> <li>OPC UA Server: Increase maximum size for strings</li> <li>Provide the "attach to tag" to buzzer properties inside project widget</li> <li>Fit to screen size</li> </ul> Dialogs <ul style="list-style-type: none"> <li>Add Keyboard functionalities also in Dialog pages</li> </ul> Documentation <ul style="list-style-type: none"> <li>OpenVPN client support (integrated into the BSP Linux)</li> <li>Review of Sampling Filter explanation in user manual</li> </ul> JavaScript <ul style="list-style-type: none"> <li>Change current user via JavaScript</li> <li>Extend JS file read API to be able to know file encoding</li> <li>Add JavaScript debugger support for custom widget modules</li> <li>Long JavaScript class to support int64 and uint64 into Qt JavaScript engine</li> </ul>	2.8.0.367

--	--

<i><b>Known problems</b></i>	<i><b>Version</b></i>
When installing CP600 control panel option including previous version profiles, the Panel Builder installer asks for replacing the last installed version of Panel Builder. This question has to be answered with "no". In case of accidentally choosing "yes", the installer has to be executed again, although it has been finished successfully.	2.2.1
PB4Web: Canvas <ul style="list-style-type: none"> <li>• PB4Web does not support drawImage function in Canvas widget.</li> </ul> Linux IRC5 protocol <ul style="list-style-type: none"> <li>• Subscribe mode is not yet working error free.</li> </ul>	2.8.0.367

## Servo Drives

<i><b>Functional changes / New features</b></i>	<i><b>Version</b></i>
<b>Mint WorkBench</b> <ul style="list-style-type: none"> <li>• Allow entry into the Autotune screen when enabled</li> <li>• Add support for motor brake delays in Autotune tests and when entering the Drive Setup and Operating Mode wizards</li> </ul>	Build 5852

## Appendix

### Appendix 1: Release notes HA Library Package 2.4.4

#### HA Modbus TCP Library Package

Library Package for AC500 V2+V3 CPUs:

- Contained here only as help/documentation.
- The HA Modbus Library Package is currently provided directly via Sales and Support, for this AB2.2.1 release.

#### HA CS31 Library Package 2.4.4

The software Libraries in HA Library Package are for V2 CPUs only and have been tested with the following versions:

- Automation Builder V1.1, Firmware V2.4.2 (CPU and CM574), CI590-CS31-HA: Firmware T3.0.15
- Automation Builder V1.2, Firmware V2.5
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

#### Changes in different package versions

V1.0.0 HA_CS31_AC500_V13.lib	
V2.0.0 HA_CS31_AC500_V20.lib	
V2.3.0 HA_CS31_AC500_V23.lib (2013-12-11, library version V2.3.0)	HA_CS31_CALLBACK_STOP updated from program to function
V2.4.0 HA_CS31_AC500_V23.lib (2014-04-29, library version V2.4.0)	Support of more than one CS31 bus by using CM574, Bug fixes.
V2.4.1 HA_CS31_AC500_V23.lib (2014-10-24, library version V2.4.1)	Adaptation for compatibility with new FW 2.4.0 (LIB-391, LIB-394)
V2.4.2 HA_CS31_AC500_V23.lib (2015-03-27, library version V2.4.2)	bugs fixes (LIB-347, LIB-419, LIB-347, LIB-418)
V2.4.3 HA_CS31_AC500_V23.lib (2015-03-27, library version V2.4.2)	no changes in library, only online help CAA-Merger-9.chm
updated (2016-05-02)	
V2.4.4 HA_CS31_AC500_V23.lib (2015-03-27, library version V2.4.2)	no changes in library, only example and documentation
updated for CM597 (2018-06-08)	

#### Known limitations or bugs

- A list of limitations can be found in the online help: AC500 High Availability System > AC500 HA-CS31 > AC500 High Availability CS31 System Technology > System Structure > HA-CS31 Limitations
- The Replacement of CI590 is possible with a normal HA-CS31 system, which otherwise has no error : PLC A has to be (made) Primary. For replacement of CI590 when PLC B is Primary, the following pins of TU522-CS31 must be bridged before: 2.2 to 2.5, 2.3 to 2.6, 2.4 to 2.7
- CI590 modules connected on CM574-RS - SYNC led is blinking if user restart those modules. User need to user ACK\_CHG\_OVER input from HA\_CS31\_CONTROL FB to remove the same (LIB-745)
- CI590 FW T3.0.0: CI590 Analogue + Digital output compare is not working. This is fixed with CI590 FW T3.0.15
- CI590 FW T3.0.15: Manual switch over is causing SYNC led to blink on CI590 modules. User need to use ACK\_CHG\_OVER input from HA\_CS1\_CONTROL function block to reset SYNC led blink (LIB-743)

#### Installation and Update

The AC500 HA Library Package, Version 2.4.4 is part of the Automation Builder

#### Whats new in Version V2.4.2 / V2.4.3 / V2.4.4

- Support of more than one CS31 bus by using CM574 with new function blocks.
- HA\_CS31\_CALLBACK\_STOP updated from program to function.
- New PID function blocks to use dedicatedly with Digivis Faceplates.
- Visualization for Control, Diagnosis and Synchronization function blocks.
- New HA system overview visualization.
- Increased total size of the sync entry array from 256 to 1024.
- Timer & RAMP Utility function block synchronization gaps are fixed.
- fG\_HA\_PRIMARY, fG\_HA\_PM1\_PRIMARY Variable status update issues are fixed.
- Adaptation for compatibility with new FW 2.4.0
- Several bugs fixed
- Online help updated with V2.4.3
- Example updated for CM597 with V2.4.4

## Appendix 2: Release notes PS553-DRIVES 1.2.6

AC500 libraries for control and communication to ABB ACS and DCS Drives using ABB Drives Profile.

The software Libraries of this package have been tested with the following versions:

- ABB Automation Builder V1.1 (FW2.4)
- ABB Automation Builder V1.2 (FW2.5)
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

### Changes in different versions

- V1.2.6: (08.06.2018)  
- Updated Examples for Modbus TCP with CM597)
- V1.2.5: (29.05.2017)  
- Updated Examples for Modbus RTU and TCP (workaround for AB-12166)
- V1.2.4: (15.03.2017)  
- Updated Example documentation: Quickstart Guide B 3ADR025232M0201.pdf (LIB-1247)  
- Online help: Added chapter about "ACS / DCS Drives Communication via Modbus TCP EXT" library (AB-11069)
- V1.2.3: (22.09.2016)  
Added broadcast message functionality to ACS\_COM\_MOD\_RTU\_GEN Function block (V1.1.3).  
- ACSDrivesComModRTU\_AC500\_V20
- V1.2.2: (24.06.2016)  
Improved generation time of DONE output for Profibus and Profinet DPV1 function blocks (V1.0.1)  
- ACSDrivesComPB\_AC500\_V24  
- ACSDrivesComPN\_AC500\_V24
- V1.2.1: (17.03.2016)  
Update of online help
- V1.2.0: (27.10.2015)  
Added following new libraries (V1.0.0)  
- DCSDrives\_AC500\_V24.lib  
- ACSDrivesComPB\_AC500\_V24  
- ACSDrivesComPN\_AC500\_V24  
- ACSDrivesComModTCP\_Ext\_AC500\_V24  
Several improvements in the existing libraries  
- ACSDrivesBase\_AC500\_V20.lib (V1.1.2)  
- ACSDrivesComModRTU\_AC500\_V20.lib (V1.1.2)  
- ACSDrivesComModTCP\_AC500\_V22.lib (V1.0.1)  
Update of online help and examples
- V1.1.7: (17.07.2013)  
Corrections in PB / PNIO Example documentations - now version E  
Added Presentation "PS553 Library Introduction and Exercises V34.pdf" and  
ACS Drives - AC500 overview fieldbus connectivity.xls in folder "Examples\PS553-DRIVES"
- V1.1.6: (17.05.2013)  
Update of folder structure, documents and projects in Examples
- V1.1.5: (03.05.2013)  
Update of AC500 online help (CAA-Merger11.chm) - Version delivered with Control Builder Plus V2.3.0
- V1.1.4: (12.04.2013):  
Update of AC500 online help (CAA-Merger11.chm) including German translation.
- V1.1.3: (03.04.2013):  
Update of example documentations and AC500 online help (CAA-Merger11.chm).
- V1.1.1: (16.01.2013):  
ACSDrivesBase\_AC500\_V20.lib:  
Bug fixes in existing visualizations for webserver use

ACSDrivesComModRTU\_AC500\_V20.lib:

Bug fixes in existing visualizations for webserver use

installshield:

Bug fix to install (setup) documentation without libraries

V1.1.0: (14.12.2012):

ACSDrivesComModTCP\_AC500\_V22.lib:

new library for Modbus TCP communication to all ACSxxx drives

ACSDrivesBase\_AC500\_V20.lib:

New function blocks for fieldbus independent control and scaling

Bug fixes in existing function blocks and visualizations

ACSDrivesComModRTU\_AC500\_V20.lib:

New function blocks for Modbus RTU communication to all ACSxxx drives

New function blocks for communication to generic slave devices used on same RTU line.

Bug fixes in existing function blocks and visualizations

Documentation:

Update of chm docu in CAA-Merger11.chm

Examples:

New examples for connection with Profibus, ProfiNet

V1.0 (10.12.2010):

Release for AC500-eCo and ACS3XX

#### **Known issues**

- Drive manager may be disconnected if user is using Profinet / Profibus DPV1 read write function block in PLC. (AB-8376)
- Currently user cannot use enumeration from ACS\_PB\_PN\_PRM\_TYPE\_ENUM. Instead user need to use numerical values from ACS\_PB\_PN\_PRM\_TYPE\_ENUM only. (LIB-940)

#### **Installation and Update**

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

Examples can be found in C:\Users\Public\Documents\AutomationBuilder\Examples\PS553-DRIVES

### Appendix 3: PS566 CMS Signal Processing Package (Technology Preview)

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

Welcome to the AC500 CMS Signal Processing Package, Version 1.2.3

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.2, Type: PM592-ETH (FW2.4 and 2.5) and the FM502 (V1.0.0)
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

#### Version history

V1.0.0	with AB 1.0.0	2016-01-18	First version
V1.1.0	with AB 1.2.3	2016-07-11	New LP and HP filter blocks: SP_HIGH_PASS_FILTER_APP, SP_LOW_PASS_FILTER_APP
V1.2.1	with AB 2.1.2	2018-06-05	New function blocks: SP_FFT_RMS_APP, SP_FIR_FILTER_APP, SP_HARMONICS_APP, SP_MAGFFT_ENERGY_APP, SP_MATH_APP
V1.2.2	with AB 2.2.0	2018-10-09	Fixed calculation mistake / issue in the SP_FIR_FILTER_APP Function Block (LIB-1733), library enabled for PM595 (LIB-1721)
V1.2.3	with AB 2.2.1	2019-03-01	Examples improved (LIB-1965), updated FIR Block: First samples according to order number are deleted (LIB-1953)

#### Known limitations or bugs

only supported by PM585 or higher due to need of co-processor

Basic CMS libraries and examples are part of the Automation Builder:

- Basic Libraries: \Program Files\Common Files\CAA-Targets\ABB\_AC500\AC500\_V12\library\CMS\_IO\_AC500\_V24.lib and WAV\_FILE\_AC500\_V24.lib
- Basic Examples: \Users\Public\Documents\AutomationBuilder\Examples\PS566-CMS\Measurements

This package contains additional libraries, examples and documentation for the Condition Monitoring System:

- Signal Processing library: \Program Files\Common Files\CAA-Targets\ABB\_AC500\AC500\_V12\library\ApplicationLibraries\SP\_AC500\_V24\_App.lib
- Signal Processing examples and library help file: \Users\Public\Documents\AutomationBuilder\Examples\PS566-CMS

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

### **CMS Package V2.8.0**

The software Libraries in CMS Package are for V2 CPUs only and have been tested with the following versions:

- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

### **Changes in different package versions**

2.8.0 no functional changes.

2.7.1 no functional changes.

2.7.0 no functional changes.

2.6.3 Internal changes for future extensions, no functional changes.

2.5.3

- Updated version of CMS\_IO\_AC500\_V24.lib (V1.0.2): Minor bug fixes

- Updated version of WAV\_FILE\_AC500\_V24.lib (V1.1.0): FB WAV\_FILE\_CREATE: Added ability to read in WAV files with 64Bit data size

2.5.2

- Updated version of WAV\_FILE\_AC500\_V24.lib (V1.0.1)

- Online help added

2.5.0

- Engineering of condition monitoring solution based on FM502

- 16 fast sampling IEPE/+-10V channels with encoder connectivity for vibration analysis and machine monitoring

- Library function for control and data analysis

- Combination with other IO for e.g. temperature measurement

- PM59x: Increased HEAP memory for CMS Signal Processing Lib (C-Code)

### **Known problems**

2.6.3

Known issue while upgrading Example FM502-CMS Control.project using AB2.0.0: Please press "Keep" instead of update button as it may cause compilation error.

Triggering measurement start from external signal (e.g. DI or DC) should be prevented. The file could be corrupted. Please use the "Instantly" or "Delayed" trigger mode for starting a measurement.

## Appendix 4: PS565 BACnet-ASC Library Package (license required)

Welcome to PS565 BACnet-ASC Library Package, Version 1.0.1

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.2, Firmware V2.5
- Automation Builder V1.2.3, Firmware V2.5.3
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

V0.9.0 2016-05-04 First version, technology preview  
V1.0.1 2016-08-30 First product version, certified by BTL

### Known limitations or bugs

- eCo (PM554 etc.): Very little applications possible only
  - BASC\_SERVER + BASC\_DEVICE + 1 ANALOG\_IN is working
  - May be one to two more FBs will work in addition
- Runtime error #81 after program change and download -> Solution: Perform "Project - Clean all" and download again [LIB-1074]
- Bacnet server runs with a cycle time of 100ms. In case of high BACnet network traffic the response is limited likewise --> Please ask support for a version with faster cycle times then. [LIB-1390]

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

This Library needs a valid license for compilation.

- License is obtained via an authorization code as a product, which has to be bought via the normal AC500 sales channels.

### Whats new in Version V1.0.1

Several fixes for BACnet certification

## Appendix 5: PS554 FTP Client Library Package (Technology Preview)

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

Welcome to the AC500 FTP client Library Package, Version 1.8.1

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.0, CBP 2.3.0, CPU-FW V2.4.2, Type: PM583-ETH
- Automation Builder V1.1, Type: PM592-ETH (FW 2.2, FW2.3, FW2.4), PM591-2ETH (FW 2.4.1), PM573 and PM564 (FW 2.4.1)
- Automation Builder V1.2
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

2013-02-06 V 1.0 - released  
 2013-03-06 V 1.2 - few bug fixes  
 2013-03-27 V 1.3 - added corrections from final review  
 2013-06-24 V 1.4 - Fixed reply code evaluation when opening a data channel to Microsoft FTP Server / - Free socket descriptor even if socket could not be opened  
 2013-07-23 V 1.5 - changed FTP\_MAX\_PATH length from 30 characters to 60 characters  
 2014-11-04 V 1.6 - Fixed error in the offset calculation of the internal receive / - Fixed reply code evaluation in the FTP\_OPEN on slow connections  
 2014-11-28 V 1.7 - Fixed error when the server sends "download complete" message before all data packages have been acknowledged by the client.  
 2018-05-28 V 1.8 - Fixed: FTPClient keeps command channel open after first reset of FTP\_DOWNLOAD or FTP\_LIST [LIB-1627] / syslibsockets.lib and CAA\_File lib are referenced automatically [LIB-1329]  
 2018-10-04 V1.8.1 - All examples updated to AB2.1 or higher (LIB-1768)

### Known limitations or bugs

- none

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

## Appendix 6:PS562 Solar Library Package (license required)

Welcome to PS562 Solar Library Package, Version 1.0.3

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.0 (CBP 2.3.0), CPU-FW V2.3
- Automation Builder V1.1, Firmware V2.4.2
- Automation Builder V1.2, Firmware V2.5
- Automation Builder V1.2.3, Firmware V2.5.3
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

PS562 Solar Library Package	Solar_AC500_V22.lib	SolarNREL_AC500_V22.lib
V1.0.0	V1.0.0 (2012-12-19)	V1.0.0 (2012-12-19)
V1.0.2 / V1.0.3	V1.0.2 (2016-02-16)	V1.0.1 (2016-02-16)

### Known limitations or bugs

SolarNREL\_AC500\_V22.lib

- Not running on Eco

Solar\_AC500\_V22.lib

- (no known limitations)

Solar example does not work with PM595 (LIB-1722).

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

This Library needs a valid license for compilation.

- License is obtained via an authorization code as a product, which has to be bought via the normal AC500 sales channels.
- If you had an authorization code for this major library version already, please contact support for an update license/code.

### What's new in Version V1.0.2 / V1.0.3

- Solar\_AC500\_V22.lib compatible with new CPU type PM595
- SolarNREL\_AC500\_V22.lib compatible with new CPU type PM595
- Example updated with V1.0.3

## Appendix 7: PS563 Water Library Package (license required)

Welcome to PS563 Water Library Package, Version 1.2.2

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.0 (CBP 2.3.0), CPU-FW V2.3
- Automation Builder V1.1, Firmware V2.4.2
- Automation Builder V1.2, Firmware V2.5
- Automation Builder V1.2.3, Firmware V2.5.3
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

PS563 Water Library Package	LogData_AC500_V23.lib	PUMP_AC500_V23.lib	HMI Example	PSCT Pump Station Configuration Tool (Technology Preview)
V1.0.0	V1.0.0 (2013-10-24)	V1.0.0 (2013-10-22)	HMI_ACQ_V18_Example.zip	n/a
V1.1.0	V1.1.0 (2015-04-17)	V1.0.1 (2014-10-15)	HMI_ACQ_V191_Example.zip	n/a
V1.2.0	V1.1.0 (2015-04-17)	V1.1.0 (2015-09-15)	HMI_ACQ_V191_Example.zip	V1.2.0
V1.2.1	V1.1.1 (2016-03-17)	V1.1.0 (2015-09-15)	HMI_ACQ_V191_Example.zip	V1.2.2 / V2.0.0
V1.2.2	V1.1.1 (2016-03-17)	V1.1.1 (2018-03-21)	HMI_ACQ_V191_Example.zip	n/a (discontinued)

### Known limitations or bugs

LogData\_AC500\_V23.lib

- Not running on Eco
- CPU firmware must be V2.3.3. or higher
- Use SD card from ABB
- Maximum number of files (input of FB LOG\_HANDLING) is limited to 500, if SD card is formatted with FAT16

PUMP\_AC500\_V23.lib

- (no known limitations)

HMI example for ACQ Drive (project for pumping functions in ACQ810)

- (no known limitations)

### **Installation and Update**

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

This Library needs a valid license for compilation.

- License is obtained via an authorization code as a product, which has to be bought via the normal AC500 sales channels.
- If you had an authorization code for this major library version already, please contact support for an update license/code.

### **What's new in Version V1.1.0**

- PUMP\_AC500\_V23.lib compatible with new CPU type PM595
- LogData\_AC500\_V23.lib: Bugs fixed (details in LOG\_VERSION\_INFORMATION)
- HMI example compatible with Panel Builder V1.91.0

### **What's new in Version V1.2.0**

- PUMP\_AC500\_V23.lib with new simulation blocks
- Pump Station Configuration Tool as Technology Preview

### **What's new in Version V1.2.1**

- Pump Station Configuration Tool as Technology Preview: Boost Control Mode added
- LogData\_AC500\_V23.lib: Bugfix direct communication Mode 2

### **What's new in Version V1.2.2**

- PUMP\_AC500\_V23.lib - Fixed: Autochange style 3 not working for level control with two pumps [LIB-1637]
- Pump Station Configuration Tool removed (discontinued)

## Appendix 8: PS564 Temperature Control Library Package (license required)

Welcome to the PS564 Temperature Control Library Package, Version 1.1.1

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.1 (CPU-FW V2.4, Panel Builder V1.9)
- Automation Builder V1.2 (CPU-FW V2.5, Panel Builder V2.0)
- Automation Builder V1.2.3 (CPU-FW V2.5.3 Panel Builder V2.0.1.195)
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

- V1.0.0 2015-12-10 First version
- V1.1.0 2016-05-04 Online documentation corrected, improved logger, current monitoring
- V1.1.1 2016-07-29 Update of online documentation

### Known limitations or bugs

- Cooling not possible if Heat is disabled (LIB- 918)
- If TECT\_WrongLimits error is generated, then Reset warm is required to reset the Error. (LIB- 939)
- Autotune will still be started when Actual Temperature is greater than Tune Setpoint (LIB-912)

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

This Library needs a valid license for compilation.

- License is obtained via an authorization code as a product, which has to be bought via the normal AC500 sales channels.
- If you had an authorization code for this major library version already, please contact support for an update license/code.

### What's new in Version V1.1.0 / V1.1.1

- Current monitoring with common or individual sensor, 1 phase or 3 phase
- Data logging modified in order to reduce number of data log lost
- Online help updated with V1.1.1 (AB-8489)

## Appendix 9:AC500 HVAC Library Package (Technology Preview)

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

Welcome to the AC500 HVAC Application Library Package, Version 1.0.3

It contains the following components:

- AC500 Library HVAC\_AC500\_App\_V22.lib (V1.0.2) containing basic Function Blocks, structures and visualizations for Heating, Ventilation and Air Condition
- AC500 Library CTRL\_AC500\_App\_V22.lib (V1.0.1) containing HVAC specific control or signal processing blocks
- CTRL\_test\_example\_PM583.project example for the CTRL library, function block CTRL\_PI\_PULSE\_APP
- HVAC AC500 Application Library Package Documentation V103.pdf (V1.0.3) documentation for HVAC libraries including example description

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.1
- Automation Builder V1.2
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

V1.0.0	2013-11-07	First release of package, consisting of HVAC_AC500_App_V22.lib (V1.0.0) and CTRL_AC500_App_V22.lib (V1.0.0)
V1.0.1	2014-05-15	HVAC_AC500_App_V22.lib (V1.0.1): Update of air density and enthalpy FB
V1.0.2	2015-01-19	HVAC_AC500_App_V22.lib (V1.0.2): Add conversion function LREAL_TO_REAL, CTRL_AC500_App_V22.lib (V1.0.1): CTRL_FILTER_CONTINUOUS_APP optimized
V1.0.3	2015-12-10	Example CTRL_test_example_PM583.project updated for upgrade to PM595

### Known limitations or bugs

none

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

## Appendix 10: PS571 Pumping Library Package (Technology Preview, license required)

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

Welcome to PS571 Pumping Library Package, Version 0.9.0

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.2.3, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

V0.9.0 First version (Oct. 2016)

### Known limitations or bugs

External mode of sleep function is not yet implemented

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

## Appendix 11: PS552-MC-E Motion Control Library Package (license required)

Welcome to PS552-MC-E Motion Library Package, Version 3.2.2

The software Libraries in this package have been tested with the following versions:

- Automation Builder V1.2, Firmware V2.5
  - CM579-ETH EtherCAT coupler FW 4.3.0
  - Bosch Indra Drive Cs FW MPB-16V20-D5-1-NNN-NN
  - ACSM1 FW 1510 + FECA-01 FW 109
  - E150 FW 58.09
- Automation Builder V1.2.4, Firmware V2.5.3
- Automation Builder V2.0.0
- Automation Builder V2.0.1
- Automation Builder V2.0.2
- Automation Builder V2.0.3
- Automation Builder V2.0.4
- Automation Builder V2.1.0
- Automation Builder V2.1.1
- Automation Builder V2.1.2
- Automation Builder V2.2.0
- Automation Builder V2.2.1

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

- |        |            |        |                    |
|--------|------------|--------|--------------------|
| • V1.0 | PS551-MC   | (2010) | First version      |
| • V2.0 | PS552-MC   | (2011) | PLC based Motion   |
| • V3.0 | PS552-MC-E | (2014) | Coordinated Motion |
| • V3.1 | PS552-MC-E | (2016) | see below          |
| • V3.2 | PS552-MC-E | (2016) | see below          |

### Known limitations or bugs

- Initial delta times values for MC\_PositionProfile, MC\_VelocityProfile and MC\_AccelerationProfile must be zero (LIB-550)
- ACS355\_Drive-based\_MotionControl\_ProfibusDP.project and ACSM1\_Drive-based\_MotionControl\_ProfibusDP.project: Compilation error due to new Profibus library. Work around is user should manually delete PROFIBUS\_AC500\_V10.lib. (LIB-1311)
- Using MC\_COMBINEAXES results in increasing EtherCAT processing time when used with Modulo axes (LIB-1219)
- MC\_SetPositon reports error 7 (timeout) as long as Execute=TRUE used with PTO (LIB-1139)
- Move FBs should not start a movement with deceleration=0, because it will then never stop again (LIB-1040)
- Stepper motor running with MC\_Power function block does not stop even if the MC\_Power function block is disabled while running. (LIB-1560)
- MC\_ReadStatus function block is reading wrong status when the Axis Enable DI0 is powered off on FM562 module (LIB-1561)
- Automation Builder crashes when PLC\_PTO\_PLCOpen\_example.project is used with MC MoveAbsolute (AB-14638)
- Automation Builder crashes when PLC\_PTO\_PLCOpen\_example.project is used with MC MoveAbsolute (AB-14638)

### Installation and Update

This Library Package is part of the Automation Builder. It can be selected as an Option during installation.

This Library needs a valid license for compilation.

- License is obtained via an authorization code as a product, which has to be bought via the normal AC500 sales channels.
- If you had an authorization code for this major library version already, please contact support for an update license/code.

#### Whats new in Version V3.1.0

- New function blocks
  - MCA\_MoveRelativeOpti
  - CMC\_Sinterpolation
  - Buffered and blending movement for coordinated motion
- Direct parameter access through AXIS\_REF structure
  - Position control loop parameters directly available
- Additional actual values from AXIS\_REF structure
  - Improvement for software limit switches
  - U\_PER\_REV\_NOMINATOR/U\_PER\_REF\_DENOMINATOR as DINT (from WORD)
- Bug fixing
  - Improved accuracy of acceleration/deceleration times when using Jerk
  - Allow access to new axis run-time parameters to adjust gains, following error limits and other axis related settings
  - Additional error codes added to Kernel ErrorID
  - Inclusion of new software limit functions including ramp to limit
  - Fixed issue with modulo master axis when using MC\_PhasingRelative
  - Fixed issue with MC\_CamIn when using data that is relative to start point
  - Improved operation of MC\_ReadStatus function block
  - Scaling parameters for axis now defined as DINT instead of WORD
  - Fixed issue with MC\_MoveContinuousAbsolute caused by constantly changing Velocity parameter
  - Increased range of various axis parameters (e.g. MaxVelocityApplication changed from WORD to LREAL)
  - Added new generic ECAT\_CiA402\_CONTROL\_APP function block to replace previous block that referenced e150 servo drive
  - In combination with PM595, Ehercat and motion-cycle < 1ms possible
  - 16 bit limits for velocity, acceleration and deceleration removed

#### Whats new in Version V3.2.x

- New function blocks
  - ECAT\_AC500\_APPL\_V21  
New block ECAT\_402\_ParameterHoming\_APP to send homing related parameters per SDO support for drive-based homing and input parameter for drive-operation mode with ECAT\_CiA402\_CONTROL\_APP
  - MC\_BLOCKS\_AC500\_V11  
New block MCA\_DriveBasedHome to execute a drive based homing method for 402-profile drives on Ethercat  
New block MCA\_GearInDirect, a modified MC\_GearInPos which does not need the master to move for starting synchronization  
New block MCA\_CamInDirect, a modified MC\_CamIn which does not need the master to move for starting synchronization  
New block MCA\_SetOperatingMode, allows to set the axis in a state to work just velocity based, switch of position control loop, ignore position jumps and following error
  - MC\_CoBlocks\_AC500\_V23  
New block MCA\_SyncInfeedToPath  
New block MCA\_SyncCamToPath
- New behavior
  - Axis will go to an ERRORSTOP when 32-Bit position overrun occurs with an axis in positioning mode, in velocity mode, position overrun is allowed (related to MCA\_SetOperatingMode)
- Bug fixing
  - CMC\_Sinterpolation, had wrong deceleration when velocity changed to smaller values during movement
  - SPLINE interpolation for profiled movement had not used the last data point, problem since 3.1.0
  - V\_CHECK\_TIME was not used anymore, problem since 3.1.0
  - modified the velocity calculation for CAM with MasterStartDistance, had before wrong result with non-linear velocity transition
  - changed the functionality for MCA\_SetPositionContinuous with SUPER=FALSE, did create a small movement
  - improvement for jerk calculation
  - MCA\_JogAxis had wrong behavior when moving backward with MinJogDistance > 0
  - MCA\_MoveBuffered, output ActiveEvent ok, problem since 3.1.0
- V3.2.1: Example CompactMotion\_EtherCAT\_ACSM1.project updated as workaround for AB-10467

- V3.2.2: All examples updated to AB2.1 or higher (LIB-1767)

## Appendix 12: CODESYS IEC 61850 Server 4.0.5 (runtime license required)

Welcome to the CODESYS IEC 61850 Server 4.0.5

This package allows the AC500 to act as interface to substation automation systems via IEC 61850:

- AC500 V3 CPU acts as an IED with IEC 61850 Server, Edition 1, allowing communication as MMS Server and GOOSE Publisher and Subscriber
- A wide set of Logical Nodes is pre-defined and can be extended.
- The implementation of Logical Nodes can be freely programmed in ST code.
- Automation Builder is used as IED configuration tool for modelling the IEC 61850 data structures and connecting them to the PLC applications
- Support of SCL – Substation Configuration Language to transfers detailed configuration information between different IEDs

Basic functionality has been tested with the following versions:

- Automation Builder V2.1.2, Firmware 3.1.4
- Automation Builder V2.2.0, Firmware 3.2.0
- Automation Builder V2.2.1, Firmware 3.2.2

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

### Version history

- V4.0.5 (March 2019)
  - library placeholder renamed to AC500\_IEC61850Server (4.0.5.4), package updated (AB-15610)
  - no functional changes
- V4.0.4.0 (Release, October 2018)
  - Sequence of Coded Enum bits corrected (PUA-206)
  - SCL Import error corrected (PUA 204)
  - Number of signals increased from 250 to 1000 (PUA-209)
- V4.0.3.75 (Technology Preview, Mai 2018)
  - Final fixes for certification by TÜV Süd
- V4.0.3.60 Update (March 2018) with following improvements
  - No "clean all" after update of IEC 61850 server needed any more (PUA-170)
  - Optimization of GOOSE (PUA-161, PUA-168, PUA-174)
  - Change of MAC address of GOOSE publisher and subscriber is properly updated (PUA-184)
  - GOOSE ID may contain special character like slash or dot (PUA-194)
  - SCL import improved (PUA-193, PUA-160)
- V4.0.3.18 First version (November 2017)

### Know limitation or bugs

- Maximum of 5 Client connections per Server
- Maximum of 50 entries per Dataset
- Maximum of 20 DataSets and one Report per DataSet (PUA-167)
- Operation
  - Speed: Max 3000 Byte per cycle. Example: With an IEC61850-cycle time of 2ms it takes at least 10 ms to send 5 reports à 3000 Bytes
- Engineering

- Not possible to have 2 or more IEC61850 server in one AB project. Workaround: Create 2 or more projects (PUA-172)
- Only one Logical Device per IEC61850 Server
- When data objects are inserted the first one has no suffix, e.g. "Ind" instead of "Ind0" (PUA-171)

#### Installation, Update and Licensing

- The package is an installation option of Automation Builder
- Basic documentation can be found in the online help – Automation Builder - PLC Integration - Configuration in Automation Builder for AC500 Products - Protocols and Special Servers - IEC 61850 Server
- AC500 specific documentation is part of the examples documentation. This also contains certificates, MICS, PICS, PIXIT and TICS  
typical folder: C:\Users\Public\Documents\AutomationBuilder\Examples\PS5602-IEC61850
- For operation a runtime license is required. Right-click on the PLC – Runtime Licensing – PLC runtime licensing.
- Please contact your local sales support to get a runtime license
- For Update projects from previous AB versions:
  - Open project
  - Go to Menu: Project- Update Project
  - Go to IEC\_61850\_Server (below Ethernet) and Update objects

### Appendix 13: PS5605-Drives Library Package for AC500 V3 (Technology preview)

**Disclaimer:** Technology Previews are designed to give you a sneak peek at upcoming technologies. They are non-final versions of our product and should NOT be taken as a measure of the fit, finish, capability, and overall quality of the final release (including user documentation). Technology Preview features can be removed without further notice. If you use the preview, you could experience things that go wrong, data that gets lost, and things to change. While we don't stop you using these versions in projects, we don't recommend it if you cannot afford data loss and the usual quirks of running preview software. It will not be possible to call ABB Support hotlines for help with Technology Preview features. If you are interested in getting support for a Technology Preview feature this can be done in the context of a piloting. In this case please contact us to set up a piloting agreement.

Welcome to the PS5605-Drives Library Package, V1.0.0.2, consisting of

- V3 library ABB\_Drives\_AC500.compiled-library
- Examples and documentation
- Library documentation (in the example folder)

The package includes the function blocks to control and communicate with the ABB drives using different Industrial protocols like Modbus TCP, Modbus RTU, Profinet, EtherCAT, CANOpen.

Basic functionality has been tested with the following versions:

- Automation Builder V2.2.0, Firmware 3.2.0
- Automation Builder V2.2.1, Firmware 3.2.2

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions cannot be guaranteed.

This release notes contains important information about the library and it's installation.

#### Version history

- Package V1.0.0.2 (Technology Preview, March 2019), containing ABB\_Drives\_AC500.compiled-library, V1.0.0.19
  - New examples for EtherCAT, Profinet and ModbusRTU
  - New function block ModRtuReadWrite23 (LIB-1904)
  - New function block DrvModbusReadWrite23 (LIB-1945)
  - New function block DrvControlModbusEng (LIB-1678)
  - New function block DrvControlCANCiA402 (LIB-1907)
  - LIB-1895 - ModRtuToken improved
  - LIB-1929 - NoConToDrive output in the DrvControlModbusEng added
  - LIB-1840 - DrvModbusRtu improved
  - LIB-1820 - DrvModbusTcp input validation for 'IpAdrServer'
  - LIB-1841 - DrvControlModbusACS and DrvControlModbusDCS improved
  - LIB-1819 - Visualization updated
  - LIB-1838 - ModRtuRead improved
  - LIB-1804 - bug fix for line token halt
  - LIB-1928 - bug fix, update in function block description related to Online output in DrvModbusTcp
  - LIB-1966 - HA specific functionality inputs

Package V1.0.0.1 (Technology Preview, October 2018) containing ABB\_Drives\_AC500.compiled-library, V1.0.0.9

- First version

#### Know limitation or bugs

- Profinet station name configuration option is not yet available with FW3.2.0. Workaround: Use V2 PLC or AB2.1.2 instead and set the station name for fieldbus adapters. User can also configure station name using parameter 51.25 PN Name Index in the drive.
- LIB-1824 Wrong input validation for ModRtuRead: Error validation happens only at the rising edge of Enable for the ModRtuRead FB

#### Installation, Update and Licensing

The package is an installation option of Automation Builder

### Appendix 13: HA ModbusTCP Library Package for AC500 V2+V3 (PS5601 runtime license required)

Welcome to HA Modbus Library Package, Version 1.2.0.x  
consisting of High Availability libraries for AC500 V2 and V3, AC500 Bulk Data Manager tool and examples.

V2:

ABB_CI52x_AC500.lib,	V1.2.0.2
ABB_HaModbus_AC500.lib	V1.2.0.2

V3:

ABB_CI52x_AC500.compiled-library	V1.2.0.4
ABB_HaModbus_AC500.compiled-library	V1.2.0.3

The software Libraries in this package have been tested with the following versions:

- Automation Builder V2.1.2 / V2.2.0 / V2.2.1
- V2 CPU: PM 573/83/85/95/92/91-2Eth, Firmware 2.7.2.15812 (592) / 2.8.0 / 2.8.1
- V3 CPU: PM5650 / Firmware V3.1.4 / 3.2.0 / 3.2.2
- CI52x-MODTCP F0 (Firmware V3.2.3)
- CM597-ETH (Firmware 1.2.1.20)
- Network configuration:  
2 Switches (Hirschmann RED25) and up to 29 CI52x modules in an MRP ring  
4 MRP switches in a ring and several CI modules per MRP in daisy-chain
- Bulk Data Manager tool: Bulk\_Data\_1.0.6788.21062.zip

The package contains further documents, examples and tools: Please start by reading the System technology description ...3ADR025285M0202.pdf, which can be found in the Automation Builder example folder:

C:\Users\Public\Documents\AutomationBuilder\Examples\PS5601-HA-MTCP\LibraryDocumentation

In no event will ABB or its representatives be liable for loss of data, profits, revenue or consequential, incidental or other damage that may result from the use of other versions of product / software / firmware versions.

The error-free operation of this library package with other products / software / firmware versions can not be guaranteed.

This release notes contains important information about the library and it's installation.

#### Installation, Update and Licensing

The package is an installation option of Automation Builder and contains the following parts:

- V2 libraries are copied to ...Common Files\CAA-Targets\ABB\_AC500\AC500\_V12\library\PS5601-HA-MTCP
- V3 libraries are installed into Library repository
- Bulk Data Manager Tool, Library documentation, Example projects and documentation are copied to  
C:\Users\Public\Documents\AutomationBuilder\Examples\PS5601-HA-MTCP

The use of the Library package requires a PS5601 runtime license. Otherwise, the CPU cannot go to Run mode but will report a notification "PLC License missing".

License can be acquired through local sales. Installation is described in

C:\Users\Public\Documents\AutomationBuilder\Examples\PS5601-HA-MTCP\AC500\_V3\Documentation\AC500 High Availability - HA-ModbusTCP V3 Library Example Description 3ADR025289M0205.pdf, chapter 5.6

#### Limitations / known problems in Package Version 1.2.0.0

- If secondary CPU modbus cable is reconnected faster than 2 minutes after disconnect, a signal flicker will occur (LIB-1601, LIB-1610).
- Network reconfiguration: may lead to 200ms/500 ms signal freeze module (LIB-1628, LIB-1690), 200ms for V3 CPU or V2 coupler CM597, 500 ms for V2 CPU
- Primary bit may flicker for few seconds during startup phase (LIB-1644, LIB-1643, LIB-1642, LIB-1661, LIB-1662)
- When an IO module is removed or reconnected during operation an error is shown (RuntimeError.2), but during the next 60 seconds it comes back after acknowledgement by input ACK (LIB-1752, 1762)
- V3 library:
  - LifeCom2 (on modbus) Error bit is blinking in normal operation when Sync cable is removed from PLC (LIB-1641)
  - Lifecom2 (CAN only) cable disconnection sometimes causing PLC switchover (LIB-1645)
  - When another program than HA is loaded to the CPU the display might still show "ArunP". Workaround: Call the FB "PmDispSetText" with: Text="\*run\*", TimeOnScreen=0 once (LIB-1794)
- Bulk Data Tool:
  - Fast counters are not fully supported --> User has to manually configure fast counters in the application (LIB-1626)

- DC562 and DO562 are not yet supported (LIB-1606)
- Ethernet coupler CM577 is not supported --> Use CM597 instead

## Change history

### Package V1.2.0.0 (2018-08-24): Release version for AB2.1.2 / 2.2.0

- Library and examples updated to AB2.1.2 and FW3.1.4
- Fixed issues:
  - Proper error indication if more than 1024 Sync FB instances (LIB-1646)
  - Utility blocks optimized, if declared as retain persistent (LIB-1708)
  - Improved diagnosis: Global variable for number of sent ethernet frames: iNoOfEthFrames (LIB-1647 / LIB-1692)
  - No Signal flicker when CI52x Ethernet cable is removed (LIB-1657)

### Package V1.1.0.1 (2018-04-24): RC1 version for AB2.1.1

- Library and examples updated to AB2.1.1 and FW3.1.3
- Fixed issues:
  - Fast counters are not working in HA system (LIB-1624 / LIB-1625)
  - Overview Visualization: LifeCom over CAN indication is misleading (LIB-1621)
  - Primary bit disturbance in secondary PLC when MRP switch is powered off (LIB-1601 / LIB-1610)
  - Run time Error is reset when there is a configuration error (LIB-1656)
  - When the CI52x FB is disabled and enabled outputs on the module is not longer frozen (Lib-1638)
  - Integrated help file contains wrong table of content (LIB-1483)

### Package V1.1.0.0 (2018-02-02): Beta version for AB2.1.0

- Library and examples updated to AB2.1.0 and FW3.1.x
- Naming of function blocks, inputs and outputs updated according to PLC Open Style
- Fixed issues:
  - HA\_TCP\_CONTROL FB outputs are running even when the EN = FALSE (LIB-1407, LIB-1406)
  - If CAN is used for second LifeCom (only possible with V3 library):
    - CAN communication is not getting reestablished after cable reconnection, Workaround: Restart system (LIB-1352)
    - On long run CAN error is appearing automatically without any disturbance to the CAN cable. LifeCom2 signal is lost (LIB-1457)
  - Error handling
    - Lifecom2 error is not getting reset, if PLC A is missing while restarting the system (LIB-1436, LIB-1416)
    - Configuration error bit0 (CI module configuration mismatch) observed when one of the PLC is powered off (LIB-1474)
    - Runtime error "CI52x module lost" is not cleared automatically after inserting the CI52x module again. Workaround: Manually acknowledge with CI function block
    - Sync error observed when Ethernet switch (MRP) power off (Connected to PLC B Primary), very rare
    - HA\_TCP\_CONTROL: No proper configuration error, when IP\_A2 and IP\_B2 are equal (LIB-1398)
    - Remote IO Modules error indication not working as expected
    - PLC stop is not causing for LifeCom2 Error if the same is configured over Modbus (LIB-1478 / LIB-1477)
    - Primary bit is not set to FALSE when PLC is in STOP mode (LIB-1451)
  - Bulk Data Manager Tool does not fit for small screens (LIB-1472) ...not all CI clusters visible.
  - Slow update of cluster signal if one PLC is powered off (LIB-1434)

### Package V1.0.0.1 (2017-08-15): Examples enhanced

- V2 Example enhanced: V2\_HA\_MODBUS\_Example\_Visu\_02.project
- V3 Example enhanced: V3\_HA\_MODBUSTCP\_Example\_Visu\_02.project

### Package V1.0.0.0 (2017-08-11): First version (Application Library) for AB2.0.x

- first package
