ControlMaster CMF
Fieldmount universal controller/indicator

Introduction
This publication provides the following commissioning instructions for the ControlMaster CMF fieldmount controller / indicator:

1 Location
(location requirements)

2 Mounting
(options and requirements)

3 Electrical connections
(AC min. / max. values and fuse requirements)

4 Front panel keys
(how to use the interface quickly and effectively)

5 Operator level menus
(menu familiarization)

6 Access levels and security options
(steps required to access Basic / Advanced level menus)

7 Diagnostic messages
(by icon and message type)

8 Controller menus – Basic / Advanced levels
(menu overview / map)

9 Indicator menus – Basic / Advanced levels
(menu overview / map)

For more information
Further publications for the ControlMaster CMF are available for free download from:
www.abb.com/measurement
(see links and reference numbers below) or by scanning these codes:

Health & Safety

Safety precautions
Be sure to read, understand and follow the instructions contained within this manual before and during use of the equipment. Failure to do so could result in bodily harm or damage to the equipment.

WARNING Installation and maintenance of this product must only be conducted by personnel authorized to work on electrical installations and in accordance with relevant local regulations.

Potential safety hazards

Electrical

WARNING To ensure safe use when operating this equipment, the following points must be observed:
- Up to 240V AC may be present. Be sure to isolate the supply before removing the terminal cover.
- Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and / or temperature.

Safety advice concerning the use of the equipment described in this manual or any relevant Material Safety Data Sheets (where applicable) can be obtained from the Company, together with servicing and spares information.

Safety standards
This product has been designed to satisfy the requirements of IEC61010-1:2010 3rd edition ‘Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use’ and complies with US NEC 500, NIST and OSHA.

Safety conventions

WARNING In this manual, a warning is used to indicate a condition which, if not met, could cause serious personal injury and / or death. Do not proceed beyond a warning until all conditions have been met.

CAUTION A caution is used to indicate a condition which, if not met, could cause minor or moderate personal injury and / or damage to the equipment. Do not proceed beyond a caution until all conditions have been met.

NOTE A note is used to indicate important information or instructions that should be considered before operating the equipment.

EC Directive 89/336/EEC

Electrical – In order to meet the requirements of the EC Directive 89/336/EEC for EMC regulations, this product must be used in an industrial environment.

End-of-life disposal

The recorder contains a small lithium battery that must be removed and disposed of responsibly in accordance with local environmental regulations.

The remainder of the recorder does not contain any substance that causes undue harm to the environment and must be disposed of in accordance with the Directive on Waste Electrical and Electronic Equipment (WEEE). It must not be disposed of in Municipal Waste Collection.

ABB is committed to ensuring that the risk of any environmental damage or pollution caused by any of its products is minimized as far as possible. The European Waste Electrical and Electronic Equipment (WEEE) Directive that initially came into force on 13 August 2005 aims to reduce the waste arising from electrical and electronic equipment; and improve the environmental performance of all those involved in the life cycle of electrical and electronic equipment.

In conformity with European local and national regulations, electrical equipment marked with the above symbol may not be disposed of in European public disposal systems after 12th August 2005.

Cleaning
The complete recorder can be hosed down if it has been installed to IP66 / NEMA 4X standards – see section 2, page 5. Warm water and a mild detergent can be used.
Symbols
Symbols that appear on this product are shown below:

<p>| | |</p>
<table>

<tr>
<td>![Symbol]</td>
<td>This symbol, when noted on a product, indicates a potential hazard which could cause serious personal injury and / or death. The user should reference this instruction manual for operation and / or safety information.</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>This symbol, when noted on a product enclosure or barrier, indicates that a risk of electrical shock and / or electrocution exists and indicates that only individuals qualified to work with hazardous voltages should open the enclosure or remove the barrier.</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>Recycle separately from general waste under the WEEE directive</td>
</tr>
</tbody>
</table>

Restriction of Hazardous Substances (RoHS)

The European Union RoHS Directive and subsequent regulations introduced in member states and other countries limits the use of six hazardous substances used in the manufacturing of electrical and electronic equipment. Currently, monitoring and control instruments do not fall within the scope of the RoHS Directive, however ABB has taken the decision to adopt the recommendations in the Directive as the target for all future product design and component purchasing.

UL Class I, Division 2 (when ordered)
This equipment is suitable for use in Class I, Division 2, groups A, B, C, and D hazardous locations or non-hazardous locations only.

**WARNING!** Do not open equipment in an explosive atmosphere.

This equipment must be installed in accordance with the pertinent clauses of the National Electrical Code and/or Canadian Electrical Code for hazardous locations.

The terminal cover retaining screw must be tightened to a torque of 50 cN.m.

**WARNING!** Explosion hazard! Substitution of components may impair suitability for class I, division 2

**UL Class I, Division 2 (si commandé)**
Cet équipement est adapté uniquement à une utilisation en zones dangereuses de classe I, division 2, groupes A, B, C et D ou non dangereuses.

**ATTENTION !** Ne pas ouvrir l’équipement dans une atmosphère explosive.

Cet équipement doit être installé conformément aux clauses du Code électrique national pour les Etats-Unis ou au Code électrique canadien pour le Canada relatives aux zones dangereuses.

La vis de fixation du couvercle de protection de borne doit être serrée à un couple de 50 cN.m.

**ATTENTION !** Risque d’explosion ! Le remplacement de certains composants peut compromettre la conformité à la classe I, division 2.
Specification

**Mechanical data**

**Protection**
IP66 / NEMA 4X

**Dimensions**
- Height – 194 mm (7.64 in) minimum (excluding glands)
- Width – 214 mm (8.42 in) – excluding glands
- Depth – 98 mm (3.85 in) door closed – minimum (excluding fixing brackets)
- Weight – 1.5 kg (3.3 lb)

**Materials of construction**
Glass-filled polycarbonate

**Weight**
1.5 kg (3.3 lb).

**Electrical**

**Power supply ranges**
100 to 240 V AC max., 50 / 60 Hz ± 10 %
(90 to 264 V AC, 45/65 Hz)

**Power consumption**
25 W max.

**Inputs / Outputs**

**Analog inputs**
2 optional

**Analog outputs**
2 optional
- Galvanically isolated from the rest of the circuitry, 500 V for 1 minute. Range-programmable source and range 0 to 22 mA, maximum load 750 Ω @ 20 mA

**Relay outputs**
4 standard, 2 optional
- Fully-programmable. Contacts rated at 5A @ 110 / 240 V.
- Standard relays are changeover.
- Optional relays are normally closed (N/C).

**Digital inputs / outputs**
6 standard, user-programmable as input or output
- Minimum input pulse duration: 125 ms
- Input:
  - Volt-free
    - (contact open > 10 MΩ, contact closed < 100 kΩ)
  - 24 V DC
    - (1-signal 15 to 30 V, 0-signal –3 to 5 V)
  - TTL
    - (low: 0 to 0.8 V / high: 2 to 5 V)
- Conforms to IEC 61131-2
- Output:
  - Open collector
  - 30 V, 100 mA max. switched
- Conforms to IEC 61131-2
- Update rate:
  - 125 ms

**Environmental data**

**Ambient operating temperature:**
0 to 55 °C (32 to 131 °F)

**Ambient operating humidity:**
Up to 95 % RH non-condensing

**Storage temperature:**
- 20 to 70 °C (–4 to 158 °F) without sensor
- 0 to 55 °C (41 to 131 °F) with sensor

**Approvals, certification and safety**

**uULus**

**General safety**
EN61010-1
- Pollution Degree 2
- Insulation Class 1

**EMC**

**Emissions & immunity**
Meets requirements of IEC61326 for an industrial environment
### Location

Locate and install in a clean, dry, well ventilated and vibration-free location providing easy access. Avoid rooms containing corrosive gases or vapors, for example, chlorination equipment or chlorine gas cylinders.

#### WARNING – Bodily injury

The CMF310 controller (or CMF160 indicator) is not fitted with a switch – an isolation device such as a switch or circuit breaker conforming to local safety standards must be fitted to the final installation. It must be fitted in close proximity to the CMF310 controller (or CMF160 indicator), within easy reach of the operator and marked clearly as the isolation device for the CMF310 controller (or CMF160 indicator).

![Fig. 1 Siting](image1)

Eye-level location

Avoid vibration

![Fig. 2 Environmental requirements](image2)

Ambient temperature

55 °C (131 °F) Max.

(front panel)

Use screened cable

---

### Mounting

#### Panel mounting

Tighten (both) panel clamp anchor screws against the panel to a torque value of 0.5 to 0.6 Nm (4.42 to 5.31 lbf/in.).

![Dimensions in mm (in.)](image3)

3 Electrical connections

WARNING – Bodily injury
- If the CMF310 controller (or CMF160 indicator) is used in a manner not specified by the Company, the protection provided by the equipment may be impaired.
- Remove all power from supply, relay, any powered control circuits and high common mode voltages before accessing or making any connections. Use cable appropriate for the load currents: 3-core cable rated 3 A and 75 °C (167 °F) minimum, and voltage: 100 / 240 V that conform to either IEC 60227 or IEC 60245, or to the National Electrical Code (NEC) for the US, or the Canadian Electrical Code for Canada. The terminals accept cables 0.14 to 2.5 mm² (26 to 14 AWG).
- Ensure the correct fuse is fitted – see Fig. 8 for fuse details.
- Replacement of the internal battery must be carried out by an approved technician only.
- The CMF310 controller (or CMF160 indicator) conforms to Insulation Class I of IEC 61010.
- All connections to secondary circuits must have insulation to required local safety standards. After installation, there must be no access to live parts, for example, terminals. Use screened cable for signal inputs and relay connections. Route signal leads and power cables separately, preferably in an earthed (grounded) flexible metal conduit.
- All equipment connected to the CMF310 controller (or CMF160 indicator) terminals must comply with local safety standards (IEC 60950, EN61010-1).

USA and Canada Only
- The supplied cable glands are provided for the connection of signal input and ethernet communication wiring ONLY.
- The supplied cable glands and use of cable / flexible cord for connection of the mains power source to the mains input and relay contact output terminals is not permitted in the USA or Canada.
- For connection to mains (the mains input and relay contact outputs), use only suitably rated field wiring insulated copper conductors rated min. 300 V, 14 AWG, 90 °C. Route wires through suitably rated flexible conduits and fittings.

Accessing the connection board

IMPORTANT (NOTE) Before fitting cable glands, identify the connections required and cable gland entries to be used.

Referring to Fig. 7:
1. Using a pozi-drive screwdriver, turn the (captive) electronics section door retaining screw (A) ¼ turn counter-clockwise and open the door.
2. Turn the cover plate retaining screw (B) anti-clockwise until the cover plate (C) can be removed.
3. Make connections to connection board terminals – see Fig. 8, page 8.

WARNING In order to comply with General Safety Insulation Class 1, the mains earth wire must be connected to the protective earth terminal block as shown, NOT to the case stud.

4. Refit cover plate (C) and secure it by turning retaining screw (B) clockwise until finger-tight. Close the door to the electronics section and turn door retaining screw (A) ¼ turn clockwise to secure.

Fig. 7 Accessing the connection board and making electrical connections
Electrical connection board

Fig. 8 CMF160 / 310 electrical connections
Analog inputs

* Using internal power supply
** Analog Input 2 can be used only with THC inputs if Analog Input 1 is also used as a THC input.
*** To connect the CJ, put LK3 into position B. To disconnect the CJ put LK3 into position A.
**** For mA input types, to ensure loop continuity when the CMF310 controller (or CMF160 indicator) is switched off, fit a 2V7 Zener diode.

Note. 3-lead RTD: 3 leads must have equal resistance, not exceeding 20 Ω each.

Fig. 9 Standard Analog Inputs (1 and 2)

Digital I/O, relays and analog output connections

Note: Digital input (voltage-free)

Fig. 10 Digital I/O, relays and analog output connections
4 Front panel keys

Operation is performed using the keys on the front panel. These enable local navigation and selection of software options on all displays, acknowledgement and monitoring and access to all menus. All diagnostic messages are displayed in the Diagnostic View. Prompts associated with active keys are displayed on each screen. Diagnostic and display icon descriptions are included in this document.

Key functions for controller and indicator overlays are described in the following table:

<table>
<thead>
<tr>
<th>Controller</th>
<th>Indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Controller Keys]</td>
<td>![Indicator Keys]</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Navigation key – left and Operator Level access key</td>
</tr>
<tr>
<td>B</td>
<td>Local / Remote setpoint mode selection key</td>
</tr>
<tr>
<td>C</td>
<td>Up key – navigate up menus and increase displayed values</td>
</tr>
<tr>
<td>D</td>
<td>Down key – navigate down menus and decrease displayed values</td>
</tr>
<tr>
<td>E</td>
<td>Auto / Manual control mode selection key</td>
</tr>
<tr>
<td>F</td>
<td>Navigation key – right and programmable Soft Key</td>
</tr>
</tbody>
</table>

Prompts associated with active keys are displayed on each screen. Diagnostic and display icon descriptions are included in this document.

5 Operator level menus

Operator level menus are used to adjust setpoint(s) and output(s), select setpoints, select the view and to enter Basic and Advanced modes (via the Access level).

To access Operator Level menus:
1. From the Operator Page, press to view the available menus.
2. Use the / keys to scroll through the menus and menu options.
3. Press to expand menu levels and to select menu options or press to return to the previous menu.

Menu functions are described in the following table:

<table>
<thead>
<tr>
<th>Autotune</th>
<th>Used to start or stop an autotune routine. This menu is enabled only if Autotune mode is On.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjust</td>
<td>Enables a value to be adjusted using the / keys. The icon next to a value indicates the current adjustable selection.</td>
</tr>
<tr>
<td>Setpoint Select</td>
<td>Selects the local setpoint to be used (displayed only if more than 1 local setpoint is configured).</td>
</tr>
<tr>
<td>Alarm Acknowledge</td>
<td>Acknowledges any active but unacknowledged alarms.</td>
</tr>
<tr>
<td>View Select</td>
<td>Selects the Operator view to be displayed.</td>
</tr>
<tr>
<td>Enter Config. Level</td>
<td>Displays the Access Level selection views – see Section 6, page 11 for security options.</td>
</tr>
</tbody>
</table>
Access levels and security options

Access levels

The Access level menus are used to enter Basic and Advanced menus, view all parameters in Read Only mode and to logout (back to Operator View mode).

To view Access Level menus:
1. From the Operator View mode:
   - press \[ \text{ } \]
   OR
   - press \[ \text{ } \] to display the available Operator menus and use the \[ \text{ } \] / \[ \text{ } \] keys to scroll to the Enter Config. mode, then press \[ \text{ } \].

   The Access Level menus are displayed.

2. Use the \[ \text{ } \] / \[ \text{ } \] keys to scroll to the required / permitted level of access (Basic or Advanced), then press \[ \text{ } \].

3. Refer to page 14 for Controller / Indicator menu options or page 15 for Indicator menu options.

Notes.
A 5-minute time-out period enables a user to return to the Operator View and re-access the previous menu (displayed at exit) without re-entering the password. For periods over 5-minutes (or if Logout is selected), a password must be entered to access protected levels.

Service level is reserved for factory-use only and is not enabled for end-users.

| Logout | Displayed after Basic or Advanced level are accessed.  
|        | Logs the user out of Basic or Advanced level.  
|        | If passwords are set, a password must be entered to access these levels again after selecting Logout. |
| Read Only | Enables all parameter settings to be viewed. |
| Basic | Enables access to the Basic level and adjustment of PID parameters, enabling autotuning configuration and adjustment of alarm trip points. |
| Advanced | Enables configuration access to all parameters. |
| Service | Reserved for use by authorized service personnel. |

Security options

Passwords can be set to enable secure end-user access at 2 levels: Basic and Advanced. The Service level is password-protected and reserved for factory-use only.

Passwords are set, changed or restored to their default settings at the Device Setup / Security Setup parameter – see page 14 (CMF310 controller) or 15 (CMF160 indicator).

IMPORTANT (NOTE) When the CMF310 controller (or CMF160 indicator) is powered-up for the first time the Basic and Advanced level menus can be accessed without password protection. Protected access to these levels must be allocated on-site as required.
**7 Diagnostic messages**

The controller (or indicator) is programmed to display diagnostic messages that provide information on servicing requirements and any other conditions that develop during operation.

When a diagnostic condition is detected, the associated NAMUR icon, plus the highest priority diagnostic message, is displayed in the **Status Bar** when in **Operator View**. A list of all currently active diagnostic alarm states are displayed in the **Diagnostic View**.

**Diagnostic status bar / Diagnostic View**
