ABB Ability Health Check
for stressometer flatness control

Get the competitive edge through the Stressometer flatness control health check.

Measurement made easy

Overview

Evaluate performance and identify possibilities to enhance the flatness control. Stressometer flatness control health check is a detailed and comprehensive evaluation of a Stressometer flatness control system. It is a key service for maintaining high measurement accuracy and flatness performance leading to optimal quality and yield.

Findings from the health check service are evaluated using the Quality Analysis tool and documented in a Stressometer flatness control Health Check report that can be used to enhance mill performance and yield.

Features

- Check thickness profiles of typical strips and make recommendations for flatness control improvements.
- Check cooling system performance and make recommendations for optimization.
- Check flatness influence from the shape of the work rolls – make recommendations for improvements.
- Check of mechanical actuators – make recommendations for optimal performance from minimum to maximum rolling speed.

Benefits

- Secure best possible long-term performance and reliability of the Stressometer control system.
- Increases control system utilization and production yield.
- Detect malfunctioning actuators.

Service
Service duration

Stressometer flatness control health check:
- typical 3 days on-site
- additional time for travel, preparation, analysis and reporting is needed
