

ABB's new Low Voltage Breaker and Switch Configurator is here!

Save time and avoid headaches with ABB's new configurator for low voltage circuit breakers and switches. Time is money and the new tool can save both. It allows easy configuration and pricing of breakers and switches, loads new combinations into the ERP system, and provides links to additional tools and information. Users can configure a product, instantly see its list price, link right to the catalog or website for additional information and be ready to quote or order the product within minutes.

Products currently available in the configurator are:

- Emax 2 power circuit breakers
- Emax power circuit breakers
- Tmax T1-T8 molded case circuit breakers
- Heavy duty safety switches
- Loose accessories

And the best is yet to come. Future releases of the tool will incorporate additional product line configurators, increased functionality, access to more tools and drawings, personalized accounts with account specific pricing and much, much more.

The configurator is located at <http://www.abb.us/lowvoltage-configurator> and is available to everyone. For a brief tutorial of the configurator, [click here](#).
