Polymer concrete cutouts
Reliable, safe, and cold weather friendly

Product features
- Improved reliability and durability
- Enhanced safety with shatter-proof design
- Resists damage from freeze/thaw cycles
- Less brittle
- Cast-in hot rods prevent moisture penetration
- Not susceptible to UV
- Field proven material
- Excellent electrical properties and dielectric strengths
- Superior mechanical toughness

Description
ABB’s polymer concrete cutouts are offered as an alternative to potted porcelain cutouts, which have a tendency to crack or shatter in extreme cold weather climates. The polymer concrete insulator cutout is the only one of its kind in the industry.

Proprietary manufacturing materials make the polymer concrete cutout cold weather resistant. Its unique casting process makes it more resistant to moisture ingress, and therefore resistant to damage from freeze/thaw cycles. Safety is also enhanced by the shatter-proof design, which eliminates any possibility of shattered porcelain falling on a utility worker.

Polymer concrete provides excellent electrical properties and dielectric strengths, as well as superior mechanical toughness. One utility, with over 100,000 units installed for more than twenty years, has not had a single cracked polymer concrete cutout. Most of ABB’s cutout and switch designs are available with a polymer concrete insulator. Contact the factory for more information.

Note: other ICX, LBU, (loadbreak) and NCX (non-loadbreak) designs are available

\(^1\) passed 15 kV single shot rating of 12,000 A RMS Asym.
\(^2\) required removable button head type fuse links
\(^3\) for application on systems where phase-to-phase voltage does not exceed design voltage or on grounded systems where phase-to-neutral voltage does not exceed design voltage
\(^4\) passed 7.8 kV single shot rating of 16,000 A RMS Asym.
\(^5\) may also be applied on 38 kV grounded systems at the same ratings
\(^6\) passed 27 kV single shot rating of 16,000 A RMS Asym. and 7.8 kV five shot rating of 20,000 A RMS Asym.
