

The cover and inside cover of this issue of *ABB Review* depict Statoil's Melkoya LNG (liquefied natural gas) plant located near Hammerfest in the far north of Norway. ABB delivered a complete range of power and automation products and systems to the plant. Gas from the Snohvit (Snow White) field is recovered through subsea templates, transported in pipelines to the plant, where it is liquefied for onwards transportation by ship.

Oil and gas focus

- 6 Oil and gas**
The energy we love to hate
- 15 Energy trends**
Interview with University of Texas Professor Scott W. Tinker, state geologist of Texas and Director of the Bureau of Economic Geology

Oil and gas projects

- 20 In the depths of the desert**
The challenges of building oil and gas infrastructure in a remote and inhospitable part of the Sahara Desert
- 25 Fuel from integration**
Integrated solutions for coal bed methane projects

Oil and gas technologies

- 29 A new housing trend**
Customized electrical houses are now being delivered with fully integrated electrical and automation systems
- 33 Untroubled waters**
A flexible, compact and efficient solution for oil and water separation technology
- 39 Testing large ASDSs**
Testing adjustable speed drive systems which are bringing new levels of efficiency to oil and gas customers
- 45 Wise warnings**
Turning process data into useful business insight using ABB's online MS2
- 50 Remote inspection and intervention**
Remote robotics at work in harsh oil and gas environments

Around ABB

- 56 A mine of efficiency**
ABB is helping extend the life of the massive Aitik copper mine by making it more efficient
- 63 Harmonizing drives**
The driving force behind ABB's common drives architecture
- 67 Substation retrofit**
Retrofitting Sils substation with IEC 61850 technology
- 71 Speedy protection**
ABB surge arresters for rail applications at formula-one speed and beyond
- 74 Smooth operation**
Sophisticated ring-gear mill drives from ABB (Part 2)
