ABB expands Welcome door entry system offering

Thanks to IP technology, ABB-Welcome IP provides flexibility, simplicity and elegance

ABB-Welcome IP is designed to satisfy all door entry system needs, whether residential or commercial, and includes IP camera video surveillance, security alarm, access control and smart home/building integration. Devices are connected by LAN-cable and by using power over Ethernet (PoE) no further cabling is required to connect additional door entry devices. As a result, installation and usage is much easier and more convenient, providing almost unlimited distance from control station to door, and unlimited channels and devices to satisfy even the most demanding customers.

The ABB-Welcome IP has been specified to increase the attractiveness of the system for use in high-rise buildings or large compound projects. The product is designed for fast planning, programming and commissioning, with seamless integration to meet the expectations of the end-consumer.

A central unit for the security alarm system allows the house owner to arm or disarm the home via the indoor station. Surveillance from the outdoor station can be initiated from the indoor station along with the IP camera or public camera. During the surveillance from the outdoor station, the home owner can initiate communication, unlock the door or terminate the surveillance.

Moreover the indoor station has a call waiting function with video in video display. For a 2nd call during communication there is a 2nd video recorded in video with three options to choose - answer, reject and unlock. Once the 2nd call is answered, the communication will terminate automatically. If there comes a 3rd call during the call waiting, it will be recorded as a missing call.

In addition the indoor station is able to send or receive messages from the property management software. ABB-Welcome IP is designed for single- or multi- family houses, large compound houses, high-rise buildings and small commercial buildings.

The system will be launched in the AMEA region within the first quarter of 2017.
