1 Health & Safety

Document symbols
Symbols that appear in this document are explained below:

**WARNING**

The signal word ‘WARNING’ indicates an imminent danger. Failure to observe this information may result in death or severe injury.

**NOTICE**

The signal word ‘NOTICE’ indicates potential material damage.

**Note.**

‘Note’ indicates useful or important information about the product.

Safety precautions

Be sure to read, understand and follow the instructions contained within this manual before and during use of the equipment. Failure to do so could result in bodily harm or damage to the equipment.

**WARNING**

Installation and maintenance of this product must only be conducted by personnel authorized to work on electrical installations and in accordance with relevant local regulations.
...1  Health & Safety

Potential safety hazards

Electrical

**WARNING**

To ensure safe use when operating this equipment, the following points must be observed:

- Up to 240 V AC may be present. Be sure to isolate the supply before removing the terminal cover.
- Normal safety precautions must be taken to avoid the possibility of an accident occurring when operating in conditions of high pressure and/or temperature.

Safety advice concerning the use of the equipment described in this manual or any relevant Material Safety Data Sheets (where applicable) can be obtained from the Company, together with servicing and spares information.

**Safety standards**

This product has been designed to satisfy the requirements of IEC61010-1:2010 3rd edition 'Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use' and complies with US NEC 500, NIST and OSHA.

**EC Directive 89/336/EEC**

**Electrical** – In order to meet the requirements of the EC Directive 89/336/EEC for EMC regulations, this product must be used in an industrial environment.

**End-of-life disposal**

The controller contains a small lithium battery that must be removed and disposed of responsibly in accordance with local environmental regulations.

The remainder of the controller does not contain any substance that causes undue harm to the environment and must be disposed of in accordance with the Directive on Waste Electrical and Electronic Equipment (WEEE). It must not be disposed of in Municipal Waste Collection.
Cleaning
The controller can be hosed down if it has been installed to IP66/NEMA 4X standards. Warm water and a mild detergent can be used.

Symbols
Symbols that appear on this product are shown below:

- Protective earth (ground) terminal.
- Both direct and alternating current supply.
- This symbol, when noted on a product, indicates a potential hazard that could cause serious personal injury and/or death. The user must refer to this commissioning instruction for operation and/or safety information.

- This symbol, when noted on a product enclosure or barrier, indicates that a risk of electrical shock and/or electrocution exists. Only individuals qualified to work with hazardous voltages should open the enclosure or remove the barrier.
- Recycle separately from general waste under the WEEE directive.

Restriction of Hazardous Substances (RoHS)
The European Union RoHS Directive and subsequent regulations introduced in member states and other countries limits the use of six hazardous substances used in the manufacturing of electrical and electronic equipment. Currently, monitoring and control instruments do not fall within the scope of the RoHS Directive, however ABB has taken the decision to adopt the recommendations in the Directive as the target for all future product design and component purchasing.
2 Specification

Mechanical data
Protection
- Front face IP66/ NEMA 4X
- Rear panel IP20
Dimensions
- Height – 97 mm (3.8 in)
- Width – 50 mm (2.0 in)
- Depth behind panel – 121 mm (4.8 in)
Materials of construction
Glass filled polycarbonate
Weight
0.38 kg (0.84 lb)

Electrical
Power supply ranges
- 100 to 240 V AC ±10 % (90 V min. to 264 V max.)
  50/60 Hz
- 10 to 36 V DC (optional)
Power consumption
10 W max.

Inputs/Outputs

Analogue inputs
- 1 universal
- 1 process
Analogue outputs
- 1 standard
- 1 optional
  - Galvanically isolated from the rest of the circuitry, 500V for up to 1 minute. Range programmable
  - Source and range 0 to 22 mA, maximum load 750 Ω @ 20 mA.
Relay outputs
- 1 standard
- 3 optional
  - Fully programmable. Contacts rated at 5 A @ 240 V.
  - Standard relays are changeover. Optional relays are selectable NO or NC by jumper.
**Digital inputs/outputs**

- 2 optional, user programmable as input or output.
- Minimum input pulse duration: 125 ms

**Input**
- Volt free
- 24 V DC (1 signal 15 to 30 V, 0 signal -3 to 5 V)

**Output**
- Open collector output
- 30 V, 100 mA max. switched
- Conforms to IEC 61131-2

**Update Rate**
- 125 ms

**Environmental data**

**Ambient operating temperature**
- 0 to 55 °C (32 to 131 °F)

**Ambient operating humidity**
- 5 to 95 % RH non-condensing

**Storage temperature**
- –20 to 70 °C (–4 to 158 °F)

---

**Approvals, certification & general safety**

- EN-61010-1
- cULus
- Overvoltage class III on mains, Class II on inputs and outputs
- Pollution category 2
- Insulation category 2

**Emissions and Immunity**
- Meets the requirements of IEC 61326 for an industrial environment
3 Installation

- Locate the controller in a position where its operating temperature and humidity limits will not be exceeded and ensure that it is suitably protected from direct sunlight, rain, snow and hail.
- Select a location away from strong electrical and magnetic fields. If this is not possible (particularly in applications where mobile communications equipment is used), use screened cables within flexible, earthed metal conduit.

Siting

![Siting Diagram]

Figure 1  Siting

![Temperature limits Diagram]

0 °C (32 °F) min.

55 °C (131 °F) max.

0 to 95 % RH

Humidity limits

IP66/NEMA4X (front panel), IP20 (rear)

Use screened cable

Figure 2  Environmental requirements
Mounting

ControlMaster CM10 is designed for panel mounting. For NEMA4X protection, a panel thickness of 2.5 mm (0.1 in) is required.

Referring to Figure 3:
1. Cut a hole of the correct size for the controller in the panel.
2. Insert the controller into the panel cut-out.
...3 Installation

Referring to Figure 4:

1. Position one panel clamp (A) at the top of the case against the panel.
2. Locate the panel clamp anchor (B) in slot (C).
3. Tighten the panel clamp anchor screw (D) until panel clamp (A) is lightly touching the panel.
4. Repeat steps 1 to 3 to fit the remaining panel clamp (E) and panel clamp anchor (F).
5. Torque tighten both panel clamp anchor screws to 0.1 N·m (0.9 lbf·in).

**NOTICE**

Do not over-tighten the screws.
4 Electrical connections

**WARNING**

- The controller is not fitted with a switch therefore a disconnecting device such as a switch or circuit breaker conforming to local safety standards must be fitted to the final installation. It must be fitted in close proximity to the controller within easy reach of the operator and must be marked clearly as the disconnection device for the controller. A fuse must be fitted in accordance with Figure 6 on page 14.

- Remove all power from the supply, relay and any powered control circuits and high common mode voltages before accessing or making any connections.

- Use cable appropriate for the current loads: 3-core cable rated 3 A and 90 °C (194 °F) minimum, that conforms to either IEC 60227 or IEC 60245. The terminals accept cables from 0.8 to 2.5 mm² (18 to 14 AWG).

- The controller conforms to installation category II of IEC 61010.

- All connections to secondary circuits must have basic insulation.

- After installation there must be no access to live parts, for example, terminals.

- Terminals for external circuits are for use only with equipment with no accessible live parts.

- If the controller is used in a manner not specified by the company, the protection provided by the equipment may be impaired.

- All equipment connected to the controller’s terminals must comply with local safety standards (IEC 60950, EN601010-1)
...4 Electrical connections

**NOTICE**

- Always route signal leads and power cables separately, preferably in earthed (grounded) metal conduit.
- Use screened cable for signal inputs and relay connections.
- Replacement of the internal battery (type Varta CR1620 3V lithium cell) must be carried out by an approved technician only.

**Accessing the connection terminals**

Referring to Figure 5, press terminal cover release catch A and pull the terminal cover B away from the controller body.

* Refer to the Communications Supplement (IM/CM/C-EN) for MODBUS connection details.

** N/O or N/C contact selection is made via internal jumper links. N/O is the factory default setting.

*** 200 mA type T fuse (mains AC) or 2 A type T fuse (120 V DC max.) and external isolating switch. For UL-marked controllers the fuse must be UL recognized.

**** Provides 24 V digital output (observe + and – connections).

Figure 6 Electrical connections
...4 Electrical connections

Standard analog inputs (1 and 2)

* Using internal transmitter power supply.
** Fit the CJ sensor supplied if analog input 1 or 2 are THC inputs. Alternatively, it is possible to use an external fixed cold (reference) junction if the controller is programmed for use with millivolt inputs and the appropriate thermocouple linearizer is selected.
*** Analog input 2 can be used with THC inputs only if analog input 1 is also used as a THC input.
**** For mA input types, to ensure loop continuity when the controller is switched off, fit a 2V7 Zener diode as shown.

Note. 3-lead RTD leads must have equal resistance, not exceeding 20 Ω each.
5  Front panel keys

Operation is performed using the keys on the front panel. These enable local navigation and selection of software options on all displays, acknowledgment of alarms and error messages, monitoring and access to all menus.

All diagnostics messages are displayed within the Diagnostics View.

Prompts associated with active keys are displayed on each screen. Diagnostic and display icon descriptions are included in this document.

Key functions for the controller overlay are described below:

- **A** Navigation key (left)/operator level access key.
- **B** Up/Down keys – navigate up/down menu items and increase/decrease displayed values.
- **C** Navigation key (right)/programmable soft key.

**Note.** When a soft key option is assigned to key C, the Advanced Level (see page 18) must be accessed using key A.
## 6 Operator level menus

Operator level menus are used to adjust setpoint(s) and output(s), select setpoints, select the view and to enter Basic and Advanced modes (via the Access Level).

To access Operator Level menus:
1. From the **Operator Page**, press \( \uparrow \) to view the available menus.
2. Use the \( \uparrow \) and \( \downarrow \) keys to scroll through the menus and menu options.
3. Press \( \uparrow \) to expand menu levels and to select menu options or press \( \downarrow \) to return to the previous menu.

### Autotune
- Used to start or stop an Autotune routine.
- This menu is enabled only if Autotune mode is On.

### Adjust
- Enables a value to be adjusted using the \( \uparrow \) and \( \downarrow \) keys.
- The \( \uparrow \) icon next to a value indicates the current adjustable selection.

### Setpoint Select
- Selects the local setpoint to be used
- (displayed only if more than 1 local setpoint is configured).

### Alarm Acknowledge
- Acknowledges any active but unacknowledged alarms.

### View Select
- Selects the **Operator view** to be displayed.

### Enter Advanced Level
- Displays the **Access Level** selection views.
7 Access levels and security options

The access level menus are used to enter the Basic and Advanced menus, view all parameters in read only mode and to logout (return to operator view mode).

To view Access Level menus:

1. From the operator view mode, press or press to display the available operator menus and use the and keys to scroll to Enter Config. Mode, then press . The Access Level menu is displayed.

2. Use the and keys to scroll to the required/permitted level of access (basic or advanced), then press .

<table>
<thead>
<tr>
<th>Access Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logout</td>
<td>Displayed after basic or advanced level are accessed. Logs the user out of basic or advanced level. If passwords are set, a password must be entered to access the levels again after selecting log out.</td>
</tr>
<tr>
<td>Read Only</td>
<td>Enables all parameter settings to be viewed.</td>
</tr>
<tr>
<td>Basic</td>
<td>Enables access to the basic level and adjustment of totalizer count settings and alarm trip points.</td>
</tr>
<tr>
<td>Advanced</td>
<td>Enables configuration access to all parameters.</td>
</tr>
<tr>
<td>Service</td>
<td>Reserved for use by authorized personnel.</td>
</tr>
</tbody>
</table>
...7  Access levels and security options

Security options
Passwords can be set to enable secure end-user access at 2 levels: Basic and Advanced. The Service level is password protected and reserved for factory use only.

Passwords are set, changed or restored to their default settings at the device setup/security setup parameter.
8 Diagnostics messages

The controller is programmed to display diagnostics messages that provide information on servicing requirements and any other conditions that develop during operation.

When a diagnostics condition is detected, the associated NAMUR Icon, together with the highest priority diagnostics message are displayed in the status bar when in operator view. A list of all currently active diagnostic alarm states are displayed in the diagnostic view.
