MECHANICAL POWER TRANSMISSION

ABB Ability™ Smart Sensor
For mounted bearings
Changes in temperature and vibration can indicate potential problems in mounted bearings. Yet understanding the health of the bearing is usually overlooked, leaving problems unnoticed until the bearing fails. ABB now makes it easier and safer to know how your bearing feels.

The ABB Ability Smart Sensor for mounted bearing is an easy-to-use, wireless sensor which monitors the health of your ABB Dodge mounted bearings, allowing users to reduce downtime, improve reliability, and operate safely.

ABB Ability connects you to the power of the Industrial Internet of Things (IIoT). ABB offers a unique digital advantage by combining connectivity and data analytics with our expertise to make your operations efficient, predictable and safe.

Increased safety
Increased productivity
Reduced maintenance
Eliminated unplanned stops
Easy to use

Do your bearings talk to you?
This is why they should

**Traditional way**

Routine maintenance introduces safety hazards as employees are working around rotating equipment or trying to reach bearings that are difficult or dangerous to access.

Not knowing the health of your bearings leaves you at risk for untimely equipment failure, which can lead to process interruption, unplanned downtime, and lost revenue.

Maintenance is a routine schedule based on a combination of experience, training and "this is how we always do it".

The user has little visibility of when component failure may occur.

**With ABB Ability Smart Sensor**

**Increased safety**

The ability to monitor bearings remotely allows maintenance and other relevant personnel to safely get a health check of the bearing without touching equipment.

**Increased productivity**

Trending data helps to develop patterns for monitoring of performance and ability to predict replacement.

**Reduced maintenance**

Maintenance can now be planned according to actual needs rather than based on generic schedules.

**Eliminate unplanned stops**

Warnings on decreasing health status allow you to plan maintenance before there is a problem and the system is down.
Easy to use

Wireless
The ABB Ability Smart Sensor for mounted bearings is designed for quick and easy installation and activation. Sensor is battery operated, no wiring, special tools or special software required.

Easy installation
Dodge mounted bearings come sensor ready with drilled, threaded, and plugged installation holes. The ABB Ability smart sensor for mounted bearings is installed by removing the plug and threading the sensor into the provided receptacle.

Retrofitting – no problem
With special adapter sensor installation on existing Dodge bearings is easy, simple and keep original functionality of grease stud.

Easy activation
The sensor is activated by pressing the LED activation switch.

Complimentary access to ABB Ability for data trending
Easy to use
No matter where you are

Machinery is working even when you are not. Advanced conditional monitoring is now hand held through the Smart Sensor App. Designed with ease in mind, the app allows you to get up to date information on all bearings at any time, no matter where you are. Simply download ABB Ability Smart Sensor App for any iOS or Android based device.

**Intuitive interface**
The simple, graphical interface is easy to use and understand.

**Traffic light system**
Bearing health is displayed with a traffic light icon to quickly show users the state of that bearing.

**Push notifications**
When conditions change, you want to be the first to know. ABB Ability allows you to get notifications based on your preferences.

**Constant communication**
When events happen, everyone in the organization can know. This also allows records of who closes the events and what comments are made.

**Event log**
All maintenance performed on a bearing can be scheduled and recorded in the app, providing an easy to access record of service for each bearing.

**Asset identification**
Each bearing is registered through a part number, which provides a reference when it comes time to replace.

**Access in remote locations**
When bearings are located in difficult to reach locations, out of mobile device range, sensor data can be automatically sent thru Bluetooth Low Energy to the ABB Ability platform using a Gateway.

Twenty Smart Sensors can be connected to one Gateway.
ABB understands the importance of protecting your data, and we take this responsibility seriously. The ABB Ability Smart Sensor for mounted bearings adheres to strict security measures to ensure that the health of your bearings is all you need to worry about.

**Data ownership**
- You own all of your data.
- Your data cannot be accessed by anyone outside your company unless you have authorized them in the portal.

**The sensor is protected from unwanted access**
- 16-bit Personal Identification Number (PIN) authentication
- PIN is changeable during commissioning as well as during normal sensor usage (Default PIN is 0000)
- PIN throttling prevents brute-force attacks

**All sensor measurements are encrypted**
- By recommendation of National Institute of Standards and Technology (NIST)
- Decryption key is protected by authentication PIN

**Secure communication system overview**

- **The sensor is protected from unwanted access**
  - 16-bit Personal Identification Number (PIN) authentication
  - PIN is changeable during commissioning

- **All sensor measurements are encrypted**
  - Standardized 128-bit Advanced Encryption Standard (AES)
  - Satisfies National Institute of Standards and Technology (NIST) recommendation
  - Decryption key protected by authentication PIN

- **User authentication**

Standard Transport Layer Security (TLS) version 1.2, are cryptographic protocols designed to provide communications security over a computer network. The protocols are used in applications such as web browsing, email, instant messaging, and voice over IP (VoIP). Websites can use TLS to secure all communications between their servers and web browsers.
Safe to use
Certificates

Third-party hazardous location certified (intrinsically safe)
When it comes to applications in hazardous environments, there’s no reason for customers to assume any risk by using a product which is self certified. That’s why Smart Sensors for mounted bearings is third party ATEX certified for worry-free use in hazardous environments. All required product markings and documentation are included with each sensor at no additional charge. When it comes to hazardous environments, you can trust ABB Ability Smart Sensor for mounted bearings.
The Smart Sensor for mounted bearings includes complimentary access to the ABB Ability digital platform. This portal allows you to monitor bearing function and analyze data trends, leading to better uptime and ensuring that critical operations run smoothly and consistently.

The sensor uses Bluetooth Low Energy to wirelessly communicate information about the bearings operational health via your smartphone or bluetooth-gateway to a secure server. Data from the sensor can be displayed graphically on a smart phone, tablet or the ABB Ability web portal.

**Trending data**

Allows users the ability to zoom in and pin point certain events. Users can customize preferences and plot data relevant to them. This data is available to download to Microsoft Excel.

Advanced algorithms are loaded into ABB Ability to help direct proper maintenance and decrease unexpected down time.
