AUXILIARY CONVERTER

BORDLINE® M8 DC_750V
For light rail vehicles (LRVs)

The BORDLINE® M8 DC static converter is a compact, rugged unit developed to feed air compressors of the tram.

System overview
The BORDLINE® M8 DC converter is based on modern IGBT technology.

The system is composed by:
- N° 1 input filter for the catenary voltages (750 Vdc)
- N° 1 DC/AC inverter with adjustable output frequency up to 50Hz (400 Vac 50 Hz 3ph) to supply air compressor

HV Input Filter (750 Vdc)
The converter is powered by the catenary line through an Input Filter (no galvanic insulation is provided between converter input and MV output) – the filter working range is between 525 Vdc and 975 Vdc and it is protected by an external fuse.

3Ph inverter (750 Vdc/380 Vac 50Hz 3ph)
The three-phase inverter, due to the installed sine-filter, generates a sine wave three-phase voltage at the converter output. A V/F control is implemented to limit the inrush current when a heavy load is powered (e.g. compressors).

The nominal output power is 8.7 kVA with a 23 kVA peak up to 10 sec.

Characteristics
- IGBT technology
- Compact and robust design
- Integrated sine filter
- Fed by 750 Vdc catenary (525 Vdc - 975 Vdc)
- Output: 400 Vac 50 Hz 3ph
- Ethernet diagnostic
- Full digital control
- Underfloor installation

Control and monitoring
The converter is full digital controlled (DSP technology). The monitoring of the converter is supported by Ethernet interface (via RJ-45 connector). A web server, compatible with the most common browsers (e.g. Internet Explorer), on the diagnostic board provides monitoring of converter status.

Cooling system
The converter is cooled by natural convection.

Mechanical design
The metal structure is stainless steel with IP65 protection and it has been designed for a roof mounting. The converter has been designed for a reliable outdoor application, for an easy diagnostic status when installed in the vehicle and an easy maintenance in the lab.

Diagnostics and service
The service-friendly modular design with highly standardized components ensures high reliability, excellent spare parts availability, and optimized life cycle costs. For maintenance a diagnostic interface (Ethernet) is available. It permits to monitor converter status and alarms history.

Application example
BORDLINE® M8 DC_750V is mounted on trams running in Istanbul. ABB converter has been designed for a new tramway design project.
