Grains and ingredients handling
Boosting productivity, safety and energy efficiency
Increasing profitability without compromising quality

While milling properties are important, even more critical is producing flour with the baking quality and characteristics required for the ultimate end products in which it will be used. Variable speed drives (VSDs)/variable frequency drives (VFDs), motors and PLCs can play an important role in adjusting production to meet these quality challenges.

Food and personnel safety

“I need to make my plant and personnel safety a priority.”

Tackle diverse safety demands...
- As grain dust is as explosive as gas, employees must be protected from exposure to risks associated with dust ignition, wherever in the world they work.

...using best-in-class technology
- Dust ignition-certified motor and drive packages comply with demands of dusty and explosive environments.
- Remote monitoring protects personnel from potentially dangerous machinery.

Conform to the latest safety standards...
- Applications such as milling machines can be dangerous to work around.

... with solutions that build trust
- Advanced drive functions, like safe torque off, ensure milling machines and mixers come to a safe and efficient stop.

Energy efficiency

“We need to cut our energy bill and carbon footprint.”

Find the big energy users...
- The biggest energy users in the grain mill process include centrifugal blowers, convection fans, mills, compressors and sieves.

... unlock the saving potential
- Replacing direct on-line starting with high efficiency VSD-motor-package can lower energy costs up to 60 percent and reduce carbon dioxide emissions.
- ABB Ability™ Operations Data Management zenon software helps detect ways to optimize energy and resource consumption. Offers excellent reporting functions that give full production transparency.
- ABB Ability™ Smart Sensors for pumps and low voltage motors help identify energy saving potential.
- Upgrading to IES efficiency class motors, such as synchronous reluctance technology (SynRM) significantly reduces energy consumption.
Productivity improvement

Keep production agile and accurate...
- Fast throughput and delivery are key to maximize grain durability.
- Changing constant-speed equipment to variable-speed in order to meet varying production volumes saves time and money.
- 100 percent reliability is crucial as most mills run 24 hours a day, seven days a week, with one shutdown every 10 weeks.

... with flexible motor-driven solutions from one supplier
- Wide speed variation possible.
- Production increase often achieved without any extra investment.
- Safely interlink processes from production to logistics and warehousing, through fieldbus and built-in sensors.
- Immediate response to process demand, with no need to wait for power plant response.
- Less mechanical stress, with the possibility to drive motors in reverse direction.

Locate the right information...
- Manually extracting plant data is time-consuming and inaccurate.
- Getting access to the right data and turning it into useful information can be difficult.

... through digital solutions
- Multiple inputs and outputs (I/Os) provide a variety of process information from the VSD to the motor control.
- Open fieldbus systems allow easy drive integration to any PLC or similar control equipment, giving greater insight, information and better production control. This helps avoid product recalls.

Operation and maintenance

Lower operational overheads...
- Operational costs must be controlled without compromising safety of plant, personnel or end product.
- Maintenance must be carefully scheduled around planned downtime.

... through advanced maintenance regimes
- Soft starting avoids sudden shock loading, leading to less wear and tear to gears, belts and driven machine.
- ABB Ability™ Condition Monitoring services deliver accurate, real-time information about drive and motor events to ensure equipment is available, reliable and maintainable.
- Global service network and preventive maintenance contracts relieve pressure on in-house teams and increase speed of response to critical issues.

Eliminate production risks...
- Plant shutdowns are costly, from lost production time, spoiled goods and reputational damage.

... by utilizing smart functionality
- Temperature, load, under/overvoltage protection and warning features within drives help anticipate breakdowns.
- ABB Ability™ Condition Monitoring for powertrains warns of impending failures, long before they happen, reducing unplanned downtime.
- Motors designed for harsh conditions, offer prolonged life through a best-in-class sealing system.

“Our production must adapt quickly to meet evolving customer tastes.”

“We need better intelligence on how production lines are performing.”

“How can I control rising costs?”

“We need the most reliable products and systems to avoid unplanned shutdowns.”
Improving operational efficiency helps boost output and profitability

Many mills operate around the clock, so any downtime needs to be planned and minimized.

1. **GRAIN RECEIVED, CLEANED AND MOVED TO SILOS**
   - Grain is dropped through hopper onto a conveyor belt and moved to the main pipe system, where it is transferred by air from centrifugal blowers.
   - **Applications:**
     - Drag flight conveyors
     - Enclosed belt conveyors
     - Screw conveyors
     - Bucket elevators
     - Centrifugal blowers
   - **Requirements:**
     - High shock loads
     - Reliability due to difficult access
     - High exposure to dust, fibers and flour

2. **GRAIN ROASTING**
   - Grain is fed from intermediate silos by a feeder and moved on a screw conveyor to oven conveyor belt. Grain is roasted as it moves through the oven. Fans circulate oven air to keep temperature and moisture constant.
   - **Applications:**
     - Feeders
     - Centrifugal blowers
     - Bucket, screw and belt conveyors
     - Convection fans
   - **Requirements:**
     - Conveyor belt speed is synchronized with temperature according to required roasting level

3. **GRAIN SIEVING**
   - Sieves vibrate in horizontal and vertical directions. Grain is sorted by size. After sieving, grain of similar size is blown to peeling, mills or to intermediate silos prior to roasting.
   - **Applications:**
     - Sieves
     - Centrifugal blowers
     - Compressors
   - **Requirements:**
     - In the pipe systems, all three-way valves can be controlled pneumatically by compressors
     - Proper loading of the purifier sieves is critical to the effectiveness of the separations
MIXING, PACKING AND MOVING FLOUR

Grain is blown to be packed or mixed. Different flours mixed by feeding measured amounts of each flour into intermediate silos. Flours are moved on a screw conveyor to mixer.

Applications:
- Feeders
- Screw conveyors
- Mixers
- Centrifugal blowers

Requirements:
- High reliability of all motor-driven applications

GRAIN PEELING

Grain skin can be partly or completely removed by peeling machine. Grain is passed between two milling stones which gently separates skin from grain. After peeling, grain is blown to mills.

Applications:
- Peeling machines
- Centrifugal blowers

Requirements:
- Multiple motors call for high reliability

GRAIN MILLING

Grain is blown to mills and flows through two milling rolls which crush grain to flour. After each milling phase, flour is blown back to sieving. Milling/sieving process can be repeated several times, depending on required flour purity.

Applications:
- Mills
- Centrifugal blowers
- Sieves

Requirements:
- Each milling roll needs to accurately rotate at different speeds
- Up to 10 different low voltage AC drive applications in a grain mill process, with about 1,000 motors used
Unlock the potential in grains and ingredients handling production applications

Alongside energy saving, improved productivity and greater safety, there are many other benefits from using variable speed drives (VSDs)/variable frequency drives (VFDs) and high efficiency motors on motor-driven applications.

</tbody>
</table>
1. VSD provides precise speed and torque control of milling rolls to ensure that grain is milled consistently and to the required quality.

2. Motors and drives ensure continuous, intermittent or variable conveyor speed with less stress on mechanical components.

3. Direct torque control manages starting torque for milling and peeling machines.
Features and functions benefiting grain production

Drives, motors, PLCs and softstarters all play a vital part in keeping your production moving. Choosing the right product with the correct features is essential in ensuring an optimized production.

Variable speed drives (VSDs)/variable frequency drives (VFDs)

Energy efficiency
- Control operating costs by seeing energy costs in local currency, kWh and CO₂ emissions

Fieldbus compatible
- Use information such as flow rates to get the VSD/VFD to adjust motor speed and torque
- Get detailed insight into productivity performance and quality control through fieldbus comms connecting VSDs/VFDs with plant monitoring systems

Functional safety
- Safely stop applications using built-in safe torque off (safety level SIL3)

Low harmonics
- Eliminate supply disturbances that could trip production with built-in active supply unit and integrated low harmonic line filter

Reduced noise
- Protect staff health and safety with lower motor noise through adaptive switching frequency control

Repeatability
- Accurately adjust conveyor speed to suit filling rates of products with different characteristics

Ingress protection
- IP55 for dusty environment

Drive and motor packages

High efficiency motor and drive packages
- Save energy across the grain production process with high efficiency motors and drive packages

Cooling tower packages
- Reduce energy, vibration, noise and maintenance costs using a package that removes the gearbox from cooling towers
- Special low-speed permanent-magnet motor

Globally certified Ex drives and motors packages
- Protect plant and people and conform to global regulations using tested and certified motors and drives for potentially explosive atmospheres

Softstarters

Built-in bypass
- Reduce system complexity and size, saving time and money during installation
- Reduce heat generation from internal losses by activating bypass at full speed

Harsh environment use
- Ensure uninterrupted production in dusty or wet environments with IP66 keypad and coated electronics

Flexible communication
- Operate in local and remote mode by accessing all major communication protocols and built-in Modbus-RTU
Programmable logic controllers (PLCs)

- Comprehensive range of scalable PLCs, I/Os and robust HMI control panels delivering performance, quality and reliability
- One integrated engineering tool for programming, simulation and commissioning for PLCs, safety, drives, control panels and network
- Flexible choice of network and fieldbuses to integrate I/O’s, drives, HMI, Scada and 3rd party devices fulfilling the needs of tomorrow
- IIoT gateway functionality onboard the PLCs and control panels offer secure connection to cloud

Low voltage motors

Process performance motors
- Designed to last in the most demanding applications

Robust construction for outdoor environments
- 60 Hz and 50 Hz designs are available in IEC and NEMA frames

Easy housekeeping
- Smooth painted motors for easier cleaning

Dust ignition protection
- Prevent dust explosions with certified dust ignition proof motors

Higher efficiency
- IE3, IE4 or ultra-premium IE5 efficiency motors offering the lowest total cost of ownership

Suitable for VSD/VFD operation

Service and monitoring
- ABB Ability™ Smart Sensor ready

Medium voltage motors

- High power density with easy configurability
- Dedicated standards for both NEMA and IEC
- Built-in serviceability features reduce downtime and cost of not running
- Flexible repositioning of main terminal box
- Optimized motor and drive packages for simplified installation

From the factory floor to the cloud and beyond

ABB Ability™ Condition Monitoring for powertrains optimizes the performance and efficiency of electric motor-driven rotating equipment. It enables better decision making by providing real-time access to data on all parameters for drives, motors and pumps.

**Intelligent powertrain**
The powertrain is equipped with sensors and cloud connectivity and can comprise motors, drives and pumps.

**Turning data into valuable insights**
Data gathered through VSDs’ inbuilt sensors and loggers together with that collected from ABB Ability™ Smart Sensors fitted to motors and pumps, can be collected, stored and further accessed via the cloud. The ability to gather and analyze this data insights paired with service expertise can reveal information on the status and condition of your equipment, so that service activities can be scheduled more effectively.
Accessing data for analytics
Detailed information can be extracted into a company’s own portal and systems. Information on many aspects of the poultry process is available, including the ability to know exactly when and how production equipment was cleaned. Detailed dashboards give full transparency so that you can take actions that lead to less downtime, extended equipment lifetime, lower costs, safer operations and increased profitability.

Gain a digital advantage
While the data is always at your disposal, ABB service experts can work with you to provide help on how you analyze the data and define the steps for improving your operations.

Ensuring that the right person is exposed to the right information at the right time brings:
• Appropriate response to production challenges, minimising operating costs and wastage of products.
• Greater insight into various aspects of the poultry process, thereby improving quality and reducing variations, errors and waste.
• Maximum material traceability helps fulfil regulatory compliance.
• Lower risk of production failure and change the maintenance from reactive to predictive.

Safety Manager
Our service expertise, your advantage

ABB Motion Services helps customers around the globe by maximizing uptime, extending product life cycle, and enhancing the performance and energy efficiency of electrical motion solutions. We enable innovation and success through digitalization by securely connecting and monitoring our customers’ motors and drives, increasing operational uptime, and improving efficiency. We make the difference for our customers and partners every day by keeping their operations running profitably, safely and reliably.

With a service offering tailored to your needs, ABB Motion Services maximizes the uptime and extends the life cycle of your electrical motion solutions, while optimizing their performance and maximizing your energy efficiency gains throughout the entire lifetime of your applications. We help to keep your applications turning profitably, safely, and reliably.

Digitalization enables new smart and secured ways to prevent unexpected downtime while optimizing the operation and maintenance of your assets. We securely connect and monitor your motors, drives or your entire powertrain to our easy to use cloud service solutions. Connecting your applications also gives you access to our in-depth service domain expertise.

We quickly respond to your service needs. Together with our partners, local field service experts, and service workshop networks, we provide and install original spare parts to help resolve any issues and minimize the impact of unexpected disruptions.

Our tailored to your needs service offerings and digital solutions will enable you to unlock new possibilities. Not only are we your premier supplier of motion equipment, we are your trusted partner and advisor offering support throughout the entire life cycle of your assets. We ensure your operations run profitably, safely and reliably and continue to drive real world results, now and in the future. Our service teams work with you, delivering the expertise needed to keep your world turning while saving energy every day.
OUR EXPERTISE

YOUR ADVANTAGE
With you, wherever you are in the world

Partnering with ABB, gives you access to some of the world’s most innovative technology, legacy of expertise and solutions.

**Global reach**

ABB operates in over 100 countries with its own manufacturing, logistics and sales operations together with a wide network of local channel partners that can quickly respond to your needs. Stock availability is good, with short delivery times for many products backed by 24-hour spare parts delivery.

In addition, we work closely with grain producers to develop custom products, services and solutions to help standardize processes across multiple sites and streamline your supply chain.

We have several global R&D centers with thousands of technologists and considerable investments annually on innovation.

**End-to-end product portfolio**

Alongside its variable speed drives (VSDs)/variable frequency drives (VFDs), motors and soft starters, ABB’s automation offering includes a wide range of scalable PLCs, a selection of HMIs, instrumentation and robotics. With functional safety options, from built-in safe torque off in drives to safety PLCs, you can readily implement bespoke safety requirements.
ABB’s offering includes:

- **End-to-end power and automation solutions**, from power distribution, raw material receipt, to process and machine control, to end of line packaging
- **Power protection and power quality solutions** to safeguard equipment and processes
- Industry leading **robotic automation solutions** that improve your speed-to-market, flexibility and help make packaging a differentiator
- A complete range of **protection, connection and wire management solutions** that withstand harsh environments and extreme temperature swings, and provide the reliability needed for continuous operations

**Streamline sourcing**

ABB’s end-to-end product and services portfolio streamlines your sourcing and purchasing activities and standardizes production across multiple sites, saving you money on spare part inventories while reducing maintenance costs.
