The Internet Gateway IN/S permits access to the electrical installation from any internet access point. You can therefore operate and monitor your installation remotely. Live pictures can also be transmitted with the additional video module VM/S and a video-camera.

The Internet Gateway can also send e-mail messages to e-mail accounts or mobile devices to inform about events and alarms. Editors which you can configure simply and quickly via Internet or LAN are available for logically linking inputs and outputs and for creating the time switch programs.

The following devices are available:

<table>
<thead>
<tr>
<th>ISDN connection</th>
<th>Analog connection</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 binary inputs, 4 analogue inputs, 6 binary outputs</td>
<td>IN/S 1.1</td>
</tr>
<tr>
<td>EIB connection</td>
<td>IN/S 3.1</td>
</tr>
</tbody>
</table>

Technical Data IN/S 1.1, IN/S 1.2

**Operating voltage:** 12 – 30 V DC

**Power consumption:** approx. 8 Watt

**Mechanical data:**
- Dimensions (W x H x D): 86 x 157 x 58 mm (9 modules wide)
- Protection class: IP 20
- Connection cross-section: max. 2.5 mm²
- Weight: 0.250 kg
- Installation: DIN rail to EN 50022

**Inputs:**
- Binary inputs:
- Analogue inputs: 6 channels for potential-free contacts, 4 channels, 0 ... 5 V oder 0 ... 10 V or 0 ... 20 mA, per channel can be configured

**Outputs:**
- Switch outputs:
  - 230 V AC
  - 24 V DC
- 6 channels via potential-free contacts max. 10 A per channel with resistive load
- Rated load: max. 1380 VA
- Incandescent lamps: max. 1000 Watt
- Fluorescent lamps: max. 900 W uncompensated
- Capacitive load: 230 V AC, max. 4 µF
- Service life: 50,000 switching operations at rated load up to 6 A

**LED indicators:**
- Binary inputs
- Switch outputs
- LAN
- LINK
- ON
- one yellow LED per input
- one yellow LED per output
- yellow LED: LAN ok,
- yellow LED: link active
- 1 green LED: telephone connection active
- 1 green LED: device ready

**Network connection:** RJ 45 socket

**Telephone connection:** RJ 45 socket
- for ISDN connection (IN/S 1.1), for analogue connection (IN/S 2.1)

**USB connection:** 2 USB sockets (Type A)
- for connection of external video module (VM/S 1.1)

**Time synchronisation:** Real Time Clock
- Battery backup, synchronisation during an Internet connection

**Standards/norms:** CE

The following devices are available:

- ISDN connection Analog connection
  - 6 binary inputs, IN/S 1.1 IN/S 2.1
  - 4 analogue inputs, IN/S 3.1 IN/S 4.1
  - 6 binary outputs
### Technical Data IN/S 3.1, IN/S 4.2

All functions at a glance

**Visualisation**
The current state of the inputs and the input event memory can be viewed over LAN or from the homepage [www.domoport.de](http://www.domoport.de) / [http://www.domoport.com/](http://www.domoport.com/).
The outputs can be remotely switched from here. For mobile devices WAP access is possible via [www.domoport.com/wap](http://www.domoport.com/wap).

**Security**
Communications in Internet are performed over a secure connection (SSL) and the allocation and checking of security codes.

**Alarm and event messages**
- **E-mail:** Up to 32 e-mail recipients.
- **Event memory, video pictures or the current device values can be sent as attachments with an e-mail to e-mail accounts for mobile devices.**
- **Text messages:** A text with up to 200 characters can be configured for each message, which can be sent to up to 32 addresses.
- **Message strategy:** A professional message string can be defined for each message.

**Event memory**
The event memory can store the states of the six binary inputs, the four analogue inputs and up to 128 video pictures.

**Trend curves**
The characteristic of the states of the binary and the analogue inputs from the event memory can be represented as a trend curve.

**Video pictures**
- **Resolution:** Maximum 640 x 480 pixels
- **Transmission:** One frame every 15 seconds at a resolution of 320 x 240 pixels
- **Memory:** Up to 128 video pictures available in event memory

**Macro programming**
- **Programming:** Macros are programmed with the aid of a graphic user interface. Logical operations between inputs and outputs, mathematical functions and cyclic sequences can be implemented.
- **Parallel processing:** Up to 16 macros can be processed in parallel.
- **Variables:** 32 variables are provided for read/write access

**Time-switching function**
32 time-switching programs are provided, for which special days can also be defined.

**Configuration**
Configuration is performed with a browser over Internet or LAN.

Further Information for commissioning and operation are available in the Product Manual of the Internet Gateway.
