What we do in South Boston
Design and manufacture power and distribution transformers for utility transmission and distribution grids, industrial facilities, and commercial buildings. South Boston specializes in complex units that require one-of-a-kind engineering and customer-focused solutions. These transformers adjust and stabilize the electricity flowing from power generation to industrial, commercial, and residential customers.

Who we serve
Transformers produced in South Boston are located across the electric grid, industrial facilities, and commercial buildings, primarily in North America. Our transformers are used by electric utilities, manufacturing and industrial facilities, and commercial building owners to ensure an efficient, reliable power supply for millions of Americans and businesses.

ABB in the U.S.
ABB is a pioneering technology leader that works closely with utility, industry, transportation and infrastructure customers to write the future of industrial digitalization, increasing productivity and boosting efficiency.
