The storage of hermetic pressure contact IGCTs within their transport box is classified according to IEC 60721-3-1 set IE11.

**Time limitation for storage**
If hermetic pressure contact IGCTs are stored under conditions described in this specification and if all special supplier instructions on handling and packing are followed, shelf life is at least 5 years.

The specification as described in this document is only valid for devices as produced and packed by ABB Switzerland Ltd., Semiconductors.

**Description of class IE11**
This set covers continuously temperature-controlled locations, heating, cooling or humidification being used where necessary to maintain required conditions; exposure to some solar and heat radiation; movement of surrounding air, such as through open windows; without particular risk of biological attacks, with normal levels of contaminants experienced in urban areas with industrial activities scattered over the whole area, or with heavy traffic; without special precautions to minimize presence of dust or sand, but not situated in proximity to dust and sand sources, experiencing vibration of low significance.¹

Climatic conditions

This class applies to temperature controlled enclosed locations.

Environmental parameter | Class 1K2
--- | ---
Low air temperature | +5 °C
High air temperature | +40 °C
Low relative humidity | 5 %
High relative humidity | 75 %
Low absolute humidity | 1 g/m³
High absolute humidity | 25 g/m³
Rate of change of temperature | 0.5 °C/min
Low air pressure | 70 kPa
High air pressure | 106 kPa
Solar radiation | 700 W/m²
Heat radiation | Negligible
Movement of surrounding air | 1 m/s
Condensation | No
Precipitation | No
Rain intensity | None
Low rain temperature | None
Water from sources other than rain | No
Formation of ice and frost | No

Humidity is not controlled. Heating and cooling is used to maintain the required conditions, especially where there is a large difference between them and the open-air climate. Stored products may be exposed to movements of surrounding air due to draughts in buildings, caused by open windows, special process conditions, etc.¹

Special climatic conditions

Environmental parameter | Class 1Z2
--- | ---
Heat radiation | negligible

Biological conditions

This class applies to locations without particular risks of biological attacks. This includes protective measures, such as special product design, or storage in locations of such constructions that mould growth; attacks by animals, etc. are not probable.²

Environmental parameter | Class 1B1
--- | ---
Flora | negligible
Fauna | negligible

Chemical conditions

This class applies to locations in rural and some urban areas, with low industrial activity and moderate traffic. In winter, heating methods in concentrated urban areas may cause increased contamination. Salt mist may be present in sheltered locations in coastal areas.³

Environmental parameter | Class 1S2
--- | ---
Sand | 30 mg/m³
Dust (suspension) | 0.2 mg/m³
Dust (sedimentation) | 1.5 mg/m³

Mechanically active substances

This class applies to locations without special precautions to minimize the presence of dust or sand, but not situated in the proximity to dust or sand sources.⁴

Environmental parameter | Class 1M2
--- | ---
a) Stationary vibration sinusoidal
Displacement amplitude | 1.5 mm
Acceleration amplitude | 5 m/s²
Frequency range | 2-9 Hz
b) Non-stationary vibration including shock
Shock response spectrum type L
Peak acceleration | 40 m/s²
Shock response spectrum type I
Peak acceleration | None
Shock response spectrum type II
Peak acceleration | None
c) Static load | 5 kPa

Maximum values are limit or peak values, occurring over a period of time of not more than 30 min per day.

Environmental parameter | Class 1C1
--- | ---
Sea and road salts | Maximum value
Sulfur dioxide | 0.1 mg/m³
Hydrogen sulfide | 0.01 mg/m³
Chlorine | 0.1 mg/m³
Hydrogen chloride | 0.1 mg/m³
Hydrogen fluoride | 0.003 mg/m³
Ammonia | 0.3 mg/m³
Ozone | 0.01 mg/m³
Nitrogen oxides (expressed in equivalent values of nitrogen dioxide) | 0.1 mg/m³

### Recommended IEC 60068-2 Climatic tests

- **Dry heat**: 60068-2-2, +40 °C, 16 h
- **Cold**: 60068-2-1, +5 °C, 16 h
- **Damp heat**: 60068-2-56, +30 °C, 85 % R.H., 96 h
- **Damp heat**: 60068-2-78, +40 °C, 93 % R.H., 56 d
- **Forced condensation**: JEDEC JESD22-A100-B, Cycles between 30 °C and 65 °C, R.H. between 90 % and 98 %, 3 cycles a day, 1000 hrs

### Tests for Class 1K2

- **Class 1K2**: No tests will be done.

### Tests for Class 1C1

- **Class 1C1**: No tests will be done.

### Tests for Class 1S2

- **Class 1S2**: No tests will be done.

### Tests for Class 1M2

- **Class 1M2**: Not tested according to Storage class 1M2 but tested according to class 2M2 for transportation.
