

ANSI medium voltage switchgear

2018 webinar series

Join ABB for a webinar series dedicated to the world of ANSI MV switchgear. Webinars will cover ANSI standards, testing and switchgear basics, active vs. passive arc-flash mitigation, and some revolutionary and upcoming technologies in the world of switchgear.

February 13

Safety by Design

Join ABB for an overview presentation that covers the next step in safety for switchgear through integration of arc mitigation, digital capabilities and other sensor technologies. [Click here to register](#)

May 8

Active arc flash mitigation and improving the safety of new and older switchgear

Join ABB Switchgear and Service for a joint webinar discussing methods and technologies to improve safety in and around existing installed switchgear including condition assessments, distance, remote electric racking, and active arc mitigation devices and applications. We will cover devices for active protection, how to integrate them into medium and low voltage switchgear and arc-resistant switchgear. [Click here to register](#)

August 21

Asset Health Monitoring: shifting the maintenance mindset

Join ABB Switchgear and Service for a joint webinar covering the value of evaluating electrical equipment for early fault detection and proactive maintenance planning. [Click here to register](#)

November 13

Digital Switchgear

Join ABB for a webinar focusing on the innovations and benefits provided through digitalization of switchgear with IEC 61850 and GOOSE. [Click here to register](#)

December 11

What's New in Switchgear?

Join ABB for an overview of new products and product enhancements available for ANSI switchgear. [Click here to register](#)

Who should attend?

This webinar series is open to anyone wanting to learn more about ANSI switchgear.
