

Low Voltage Systems Products and services

MNS

Modular low voltage switchgear – a solution for power distribution in industry, power plants, buildings and marine applications.

MDY

Reliable and safe busduct system between transformer and switchgear and between switchgear sections.

MNS Marine

Safe, space-efficient and marine classified low voltage switchgear for demanding applications.

MCR and FHF

Compensation and harmonic filters – improving energy efficiency and power quality.

MCS

A comprehensive solution for various needs in power distribution, control and automation.

MNS switchgear integrated drives

MNS integrated variable speed drives. Savings and benefits for power distribution. Quick and easy implementation.

MNS PDUpro

Safe, smart and flexible power distribution center for demanding power distribution applications, such as data centers, hospitals and real estate power distribution.

MNS iS

Pre-engineered intelligent solutions for various industrial needs. Motor starters, soft starters, variable speed drives and supply units.

Services

Life-cycle services for low voltage switchgear maintenance – from spare parts to extensions.
