

ABB to roll out world's largest nationwide multi-standard fast charging network throughout the Netherlands

ABB has been selected by Fastned to supply multi-standard fast chargers to 201 Dutch Fastned highway charging locations. The chargers charge electric vehicles in 15-30 minutes and support all fast-charging standards.

The first chargers are due to be delivered in September 2013. Construction of the Fastned stations, which will include a solar canopy and installation of the ABB chargers, is expected to be completed by 2015.
