---

ABB releases the secure@home maintenance software 2.0.0.5 for ABB-secure@home security line central units.

---

## secure@home maintenance software 2.0.0.5

### Functionalities

#### Backup

To save on a PC a copy of the programming of your system, containing all the codes of the acquired devices.

#### Cloning

To download from a PC to a secure@home central unit a backup copy of the system.

Once the transfer has been successfully completed on a new central unit, this became the exact copy of the one that has been replaced.

#### Reset PIN codes

It allows you to delete all the access codes on the connected secure@home central unit.

This functionality is the only way to access a central unit if the PIN codes have been forgotten.

To restore the normal use of the central unit, it will be necessary to recreate all the users (end users, installer and maintenance technician) and their PIN codes.

### SOFTWARE HISTORY

Product Type	Version	Since	Updates and Release Notes
Maintenance software	2.0.0.5	01/2020	Market Introduction
