

LOW VOLTAGE AC DRIVES

ABB machinery drives

ACS380, 0.37 to 30 hp / 0.25 to 22 kW

The ACS380 machinery drive is ideal for both machine builders looking to integrate a VFD without incurring significant cost and end users wanting to increase productivity without sacrificing performance. With pre-configured drive variants, adaptive programming and an icon-based user interface, this drive is simple to integrate into your system.

The ACS380 machinery drives

The perfect drive for precise performance

The ACS380 is an all-compatible machinery drive ideal for machine building thanks to its robust and compact design. All-compatible ABB drives share the same architecture and user interface for ease of use.

Easy to adapt and configure to machines

With ACS380, commissioning is quick and easy thanks to the icon-based navigation on the integral control panel. Connecting to automation systems is easy thanks to preconfigured fieldbus protocols. On the hardware side, ease of use has been enhanced by having all the essential features built-in as standard. This reduces the need for additional hardware and simplifies drive selection.

Precise performance for your application

The ACS380 machinery drive is a robust and compact drive ideal for machine building. It is ready-customized and comes in a power range from 1/3 to 30 Hp, and voltages from 200 to 240 V (one and three-phase) and 380 to 480 V (three-phase). ACS380 offers EMC and connectivity variants with built-in EMC filters and/or preconfigured fieldbus protocols for ease of integration and connectivity. This saves a lot of time and money for machine builders using large numbers of drives per year.

Reliability and consistent high quality

The ACS380 drives have improved durability and reliability in harsh conditions, including coated circuit boards and enclosure IP20 as standard. All drives are tested during production at maximum temperatures with nominal loads. Tests cover both performance and all protective functions. The drives are designed for an ambient temperature of up to 50°C without derating. The drives have in their class a unique 3-phase measurement that gives very reliable earth fault protection. Also, the foil coated control panel offers a good protection against dust and gases and the galvanically isolated fieldbus gives good noise immunity.

Adaptability, reliability and high performance for machine building

The ACS380 machinery drives are part of ABB's all-compatible drives portfolio. The drives give you consistent performance throughout their whole life cycle. They also offer a wider range of standard and optional features for optimal machine building.

Ease of use built-in

ACS380 has as standard control panel with clear display. The control panel's icon-based menu helps you set up the drive quickly and effectively without needing to study manuals. If there is need for an alphanumeric, multilingual graphical user panel, also that is available.

All-compatible user interface making your life easier

ACS380 is part of ABB all-compatible drives portfolio. Other product in this portfolio are ACS480, ACS580 and ACS880 drives. All these drives have the same, easy to use PC tools and similar intuitive multilingual user interface as well as parameter structure, making using and learning them fast and easy.

Simple to select and install

Built-in features such as an EMC filter, adaptive programming, integrated safety (STO), brake chopper, a Modbus RTU fieldbus interface and safe torque off functionality simplify drive selection, installation and use. DriveSize helps to select the optimal drive and motor for the application.

Easy setup and integration to automation

ACS380 can be easily set-up by using the control panel or easy to use PC tools. Settings can also be copied to several drives by using either assistant control panel or PC tools. Also download the settings to an unpowered drive is possible by using the cold configuration tool. Preconfigured fieldbus protocols enable connectivity with all major industrial automation networks with minimized effort and complexity.

Designed for maximum reliability

Design features like coated control boards, minimized air flow through the control board section, reliable earth fault protection by 3-phase current measurement and design for 50°C ambient temperature make ACS380 a safe choice for customers expecting high reliability. This is topped up by full load test that is done to every single drive during the production.

Drive based programmability

ACS380 has built-in as standard possibility for adaptive programming that enables customizing the drive software by using either sequential or block programming. This can in some cases even eliminate the need of a separate PLC.

UL Type 1 enclosure kits

Enhance installation flexibility by allowing the drive to be wall-mounted outside of an enclosure or to provide finger-safe protection inside an enclosure.

Same startup and maintenance tools as for other ABB automation products

ACS380 is using the same tools as other ABB all-compatible drives. Drive composer PC tool for startup, configuration, monitoring and process tuning. Automation Builder for automation engineering and Drive Manager for single point of commissioning.

ACS380 drives software with versatile features

Exceptional motor control performance. Whether the requirement is high starting torque, accurate speed control, stable torque or tolerance for sudden load variations, ACS380 can do it with or without encoder feedback. ACS380 can be used even in simple positioning applications when using external motion controller.

One drive for different motor types. ACS380 supports perfectly both induction and permanent magnet motors.

Silent motor operation. Noise can be further reduced by the energy optimizer or by increasing the drive switching frequency.

"Mini PLC" inside the drive. Scale up and customize the drive to your application's requirements with adaptive programming.

Easy integration to automation. Preconfigured fieldbus protocols enable connectivity with all major industrial automation networks with minimized effort and complexity.

Built-in support for limit switches

Integrated mechanical brake control

Additional machinery features like fast stop functions and parabolic speed reference

Analyze and optimize the process with the load profile log, which shows you how the drive has been used.

Technical data

Mains connection						
Voltage and power range	1-phase, 200 to 240 V, +10%/-15%					
	1/3 to 3 Hp					
	3-phase, 200 to 240 V, +10%/-15%

How to select a drive

How to build up your ordering code

Start with identifying your supply voltage
This tells you what rating table to use. See page 11.

Select the ordering code for the ACS380 machinery drive by choosing either the standard or the configured variant (page 11). Then choose the desired EMC level on page 11. If the configured variant is selected, choose your fieldbus protocol (page 16) by selecting the correct option code and add the option codes to drive's ordering code.

Ordering information ACS380

How to build up your ordering code

The type designation tells you the specifications and configuration of the drive.
The table shows the primary drive variants.
Sample type code 2-ACS380-0425-0246-4 (V/O & Modbus variant, not possible to add options as pluscode)
Sample type code 2-ACS380-0425-0246-4 (V/O & Modbus variant, not possible to add options as pluscode)

Ordering information

The type designation tells you the specifications and configuration of the drive.

The table shows the primary drive variants.

Sample type code 1: ACS380-040S-02A6-4 (I/O & Modbus variant, not possible to add options as pluscode)

Sample type code 2: ACS380-040C-02A6-4+K475+L535 (Configured variant, possible to add options as pluscode)

Segment	A	B	C	D	E	F
ACS380	04	0	C	02A6	4	Option codes
Product series						
Types and construction						
Rating						
Voltage						
Option code						

Basic codes

Segment	Option	Description
A	Construction	04 = Module, IP20
B	EMC filter	0 = C3 (480 V variant) or C4 (230 V Variant) - Standard for USA 2 = High filtering level for First environment (EN 61800-3, Class C2) - (Contact factory)
C	Connectivity	N = Base Variant, S = Standard variant (I/O and Modbus), C = Configured variant
D	Current rating	For example, 02A6 refers to a nominal output current of 2.6 A
E	Voltage rating	1 = 1-phase 230 V, 2 = 3-phase 230 V, 4 = 3-phase 480 V

Option codes for configured variant (ACS380-04x)

Segment	Option	Code	Description
F	Fieldbus	+K451	FDNA-01 DeviceNet protocol
		+K454	FPBA-01 preconfigured Profibus-DP protocol
		+K457	FCAN-01 preconfigured CANopen protocol
		+K469	FECA-01 preconfigured EtherCAT protocol
		+K470	FEPL-02 Ethernet POWERLINK protocol
		+K475	FENA-21 preconfigured Profinet protocol (Ethernet/IP or Modbus/TCP built-in)
		+K490*	FEIP-21 Preconfigured EtherNet/IP protocol
		+K491*	FMBT-21 Preconfigured Modbus/TCP protocol
		+K492*	FPNO-21 Preconfigured PROFINET IO protocol
		+K495	BCAN-11 Preconfigured CANopen interface
I/O		+L511	BREL-01 External relay option (4x relay) (side option)'
		+L534	BAPO-01 External 24 V DC (side option)
		+L535	BTAC-02 HTL/TTL encoder interface + External 24 V DC (side option)
		+L538	BMIO-01 I/O & Modbus extension module (front option)
		+L515	BIO-01 I/O extension module (front option,can be used together with fieldbus)
Languages: The product package includes the User interface guide and Quick installation and start-up guide in English, French, German, Italian		+R700	English
		+R707	French
		+R708	Spanish
		+R714	Turkish

*Preconfigured K490, K491, K492 coming during 2020. In the meantime functionality can be done using K475.

Ratings, types and voltages

$U_N = 200 \text{ V}$ (range 200 to 240 V). The power ratings are valid at nominal voltage 230 V (0.25 to 3.0 kW)								
Light-overload use (230V)			Heavy-duty use (230V)			Maximum output current (230V)	Type designation	Frame size

I_{MAX} Maximum output current. Available for 2 seconds at start, then as long as allowed by drive temperature.

I_{Hd} Continuous current allowing 150% I_{Hd} for 1 minute every 10 minutes at 50 °C.

P_{Hd} Typical motor power in heavy-duty use.

I_{Ld} Continuous current allowing 110% I_{Ld} for 1 minute every 10 minutes at 50 °C.

P_{Ld} Typical motor power in light-overload use.

The ratings apply at 50 °C ambient temperatures.

For derating at higher altitudes, temperatures or switching frequencies, see the user's HW manual, document code: 3AXD50000029274

Drive commissioning and adaptable use with your control panel

ACS380 has as standard an icon based control panel with clear display. If there is need for other type of panel or mounting the panel in the door of the enclosure, also that is possible.

Control panel as standard

Almost anyone can set up and commission the machinery drive using available control panels. The ACS380 comes with the integrated icon based control panel as standard. You do not need to know any drive parameters as the control panel helps you to set up the essential settings quickly and get the drive into action. In addition, ACS380 supports the assistant control panel (AP-I, AP-S or AP-W).

Assistant control panel, ACS-AP-I*

The optional Assistant control has a graphical, multilingual display. There is no need to know any drive parameters, as the control panel helps you set up the essential settings quickly and get the drive into action without a hassle. Panel can be used with any products belonging to ABB all-compatible product portfolio.

Bluetooth control panel, ACS-AP-W*

The optional Bluetooth panel enables connection with the Drivetune mobile app. The app is available for free from Google Play and the Apple App store. Together with the Drivetune app and the Bluetooth panel, users can, for example, commission and monitor the drive remotely.

Basic control panel, ACS-BP-S

If there is a need to install basic panel into cabinet door, ACS-BP-S is right choice. The icon based control panel supports users with basic operation, settings and fault tracking when nothing extra is needed.

Control panel mounting platform, DPMP-01

This mounting platform is for flush mountings. The panel mounting platform does not include the control panel.

Control panel mounting platform, DPMP-02

This mounting platform is for surface mounting. The panel mounting platform does not include the control panel.

* Also compatible with other ABB all-compatible drives: ACS480, ACS580, and ACS880 drives.

Control panel options	
Type designation	Description
ACS-AP-I	Assistant control panel
ACS-AP-S	Assistant control panel
ACS-AP-W	Assistant control panel with bluetooth interface
ACS-BP-S	Basic control panel
DPMP-01	Control panel mounting platform (flush mounted)
DPMP-02	Control panel mounting platform (surface mounted)

Tools for configuration, monitoring and process tuning

ACS380 has various tools simplifying the commissioning, operation and monitoring of the drive.

Easy configuration for unpowered drives

With CCA-01 tool it is possible to configure drive parameters and even download a new software from PC to the unpowered ACS380. The power supply is taken from a PC USB port.

Connect multiple drives to one control panel

The BSPL-01 panel bus adapter (RJ45 splitter) and the BPLG-01 termination plug allow the daisy chain connection of up to 32 ACS380 drives to one assistant control panel.

PC tools

The Drive composer PC tool offers fast and harmonized setup, commissioning and monitoring. The free version of the tool provides startup and maintenance capabilities and gathers all drive information, such as parameter loggers, faults, and backups into a support diagnostics file. Drive composer pro provides additional features such as custom parameter windows, graphical control diagrams of the drive's configuration, and improved monitoring and diagnostics.

Using the BCBL-01 cable, the PC can be connected directly to the RJ-45 panel port on the top of the ACS380 drive.

When using the Assistant control panel, the Drive composer tool is connected to the drive using the mini USB connection on the panel.

Type designation	Description
BPLG-01	Panel bus termination plug
BSPL-01	Panel bus adapter (RJ45 Splitter)
BCBL-01	PC cable, USB to RJ45
CCA-01	Cold configurator adapter, packed kit
DCPT-01-KIT	Drive Composer Pro

Flexible connectivity to automation networks

Fieldbus communication reduces wiring costs when compared with traditional hard wired input/output connections.

The ACS380 configured variant is compatible with a wide range of fieldbus protocols. Fieldbus modules come as preinstalled and preconfigured thus reducing commissioning time and allowing

drive commissioning from the PLC. The ACS380 standard variant comes with built-in Modbus RTU protocol.

Support tools for integration with automation

Support for the fieldbuses is not always enough alone to get the full functionality and to make the integration easy. Due to this ABB also offers tools for seamless integration to automation systems of various manufacturers.

Universal communication with ABB fieldbus adapters

The machinery drives support the following fieldbus protocols:

Option code	Fieldbus protocol	Adapter
+K451	DeviceNet®	FDNA-01
+K454	PROFIBUS DP, DPV0/DPV1	FPBA-01
+K457	CANopen®	FCAN-01
+K469	EtherCAT®	FECA-01
+K470	Ethernet POWERLINK®	FEPL-01
+K475	Two port EtherNet/IP™, Modbus TCP, PROFINET IO	FENA-21
+K490	Ethernet/IP, dual port	FEIP-21
+K491	Modbus/TCP, dual port	FMBT-21
+K492	PROFINET IO, dual port	FPNO-21
	CIP Safety	FSCS-21
	ProfiSafe	FSPS-21
+K495	CANopen Interface	BCAN-01

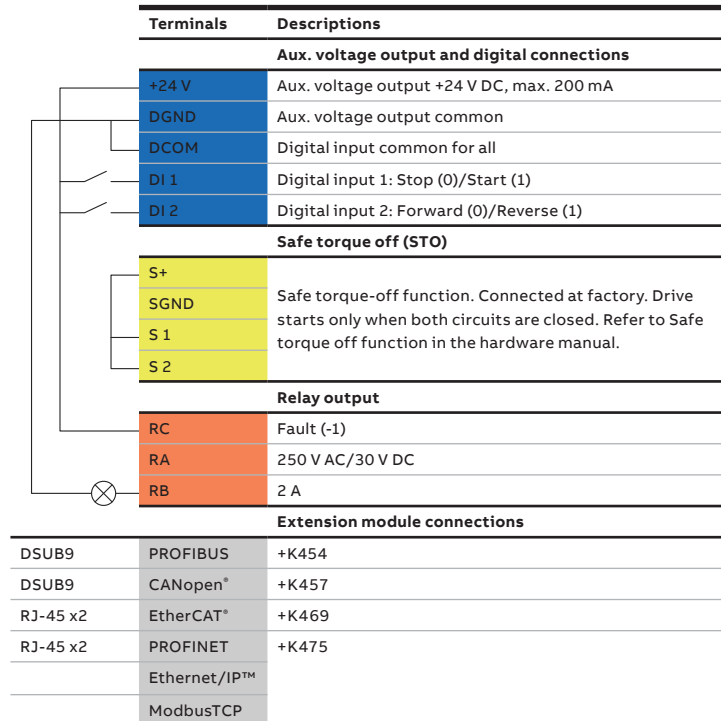

Default I/O connections of standard variant

Standard interface and extensions for ACS380 machinery drives

The ACS380 machinery drives offer two different standard interfaces: the standard variant (I/O and Modbus) and the configured variant with different interfaces. In addition, the drive has one option slot available that can be used for speed feedback, relay extensions or options which allow an external +24 V supply. For further information please see the ACS380 hardware and firmware manuals.

Default I/O connections of configured variant

Configured variant I/O can be expanded using the BIO-01 module

Input/output, extension and feedback modules for increased connectivity

Standard input and output of ACS380 machinery drives can be extended by using optional input/output extension modules. The modules are easily installed in the extension slots located on the side of the drive. It is also possible to use an optional speed feedback module that supports TTL and HTL pulse encoders.

Extension module options		
Option code	Description	Type designation
+L534	External 24 C DC	BAPO-01
+L511	External relay option (4xRO)	BREL-01
+L515	I/O extension*	BIO-01

* For use with fieldbus modules only

Feedback interface module options		
Option code	Connections	Option
+L535	Encoder interface + External 24 V DC	BTAC-02

EMC – electromagnetic compatibility

The ACS380 machinery drives are equipped with a built-in filter to reduce high frequency emissions. Drives with low EMC filters (C3 for 230 V and 480 V) are standard for the US and denoted by type codes ACS380-040X. Drives with high EMC filters (C2 for all voltages) are denoted by type codes ACS380-042X. Consult ABB for availability. C1 can be achieved with an external EMC filter.

EMC standards

The EMC product standard (EN 61800-3) covers the specific EMC requirements stated for drives (tested with motor and cable) within the EU. EMC standards such as EN 55011 or EN 61000-6-3/4 are applicable to industrial and domestic equipment and systems including components inside the

drive. Drive units complying with the requirements of EN 61800-3 are compliant with comparable categories in EN 55011 and EN 61000-6-3/4, but not necessarily vice versa. EN 55011 and EN 61000-6-3/4 do not specify cable length or require a motor to be connected as a load. The emission limits are comparable to EMC standards according to the table below.

Domestic environments versus public low voltage networks

The first environment includes domestic premises. It also includes establishments directly connected without an intermediate transformer to a low voltage power supply network that supplies buildings used for domestic purposes. The second environment includes all establishments directly connected to public low voltage power supply networks.

Comparison of EMC standards

EMC according to EN 61800-3 product standard	EN 61800-3 product standard	EN 55011, product family standard for industrial, scientific and medical (ISM) equipment	EN 61000-6-4, generic emission standard for industrial environments	EN 61000-6-3, generic emission standard for residential, commercial and light-industrial environment
1 st environment, unrestricted distribution	Category C1	Group 1, Class B	Not applicable	Applicable
1 st environment, restricted distribution	Category C2	Group 1, Class A	Applicable	Not applicable
2 nd environment, unrestricted distribution	Category C3	Group 2, Class A	Not applicable	Not applicable
2 nd environment, restricted distribution	Category C4	Not applicable	Not applicable	Not applicable

Motor cable length

The drive is designed to operate with optimum performance with the following maximum motor cable lengths. The motor cable lengths may be extended with an output choke as shown in the table.

Frame size	Maximum motor cable length	
	m	ft
Standard drive, without external options		
R0	150	492
R1, R2	150	492
R3, R4	150	492
With external output chokes		
R0	60	195
R1-R3	250	820
R4	200	656

Note: In multimotor systems, the calculated sum of all motor cable lengths must not exceed the maximum motor cable length given in the table.

Cooling and sound level

Cooling

ACS380 drives are fitted with variable-speed cooling air fans. The cooling air must be free from corrosive materials and not exceed the maximum ambient temperature of 50°C (60°C with derating*).

Cooling air flow

1-phase $U_N = 200...240\text{ V}$ (200, 208, 220, 230, 240 V)

Fuses and circuit protection

Fuse and circuit breakers

ABB UL file E211945 Volume 15, Section 4 lists the ABB Type E manual motor protectors MS132 & S1-M3-25 & MS165 as an alternate to UL classified fuses as a means of branch circuit protection. This is in accordance with the National Electrical Code (NEC). When the correct ABB Type E manual motor protector is selected from the table and used for branch circuit protection the drive is suitable for use in a circuit capable of delivering not more than 65 kA RMS symmetrical amperes at the drive

maximum rated voltage. See the following combined micro drive table for the appropriate ratings.

Combinations of Type E MMP's and drives installed with UL Type 1 kits are NOT included in the listing. Drive & MMP combinations must be assembled in an enclosure conforming to minimum enclosure volume. Consult ABB document LVD-PNTN22U-EN for alternate UL fuse selections

¹ All manual motor protectors listed are Type E self-protected up to 65 kA. See ABB publication 2CDC131060M0202 - Manual Motor Starters Guide for complete technical data on the ABB Type E manual motor protectors. In order for these manual motor protectors to be used for branch circuit protection, they must be UL listed Type E manual motor protectors, otherwise they can be used only as an At Motor Disconnect. "At Motor Disconnect" is a disconnect just ahead of the motor on the load side of the panel.

² Manual motor protectors may require adjusting the trip limit from the factory setting at or above the drive input Amps to avoid nuisance tripping. If the manual motor protector is set to the maximum current trip level and nuisance tripping is occurring, select the next size MMP. (MS132-10 is the highest size in the MS132 frame size to meet Type E at 65kA; next size up is MS165-16.)

³ Requires use of the S1-M3-25 line side feeder terminal with the manual motor protector to meet Type E self-protection class.

⁴ 480V/277V delta systems only. Short-circuit protective devices with slash voltage ratings (e.g. 480V/277 VAC) can be applied only in solidly grounded networks where the voltage from line-to-ground does not exceed the lower of the two ratings (e.g. 277 V AC), and the voltage from line-to-line does not exceed the higher of the two ratings (e.g. 480 V AC). The lower rating represents the device's interrupting capability per pole.

⁵ For all drives, the enclosure must be sized to accommodate the specific thermal considerations of the application as well as provide free space for cooling. For UL compliance the minimum enclosure volume is specified in the UL listing when applied with the ABB Type E MMP shown in the table. ACS380 drives must be mounted in an enclosure when used with MMPs. The UL Type 1 kit does not meet the requirements of an enclosure for this purpose. See ACS380 Hardware Manual 3AXD50000029274 for free space requirements.

⁶ Branch circuit short-circuit protection for group installation by circuit breakers: Suitable for motor group installation on a circuit that is capable of delivering no more than 65 kA RMS symmetrical amperes, 480 V max. Use a circuit breaker with an interrupting rating of no less than 65 kA RMS symmetrical amperes, 480 V max.

This is a condensed table for reference only. Refer to the complete tables in the ACS380 Hardware Manual 3AXD50000029274, including sizing for group installations, before sizing and selecting components.

Brake resistor sizing

Brake chopper

The brake chopper is built-in as standard for the ACS380. It not only controls braking, but also supervises system status and detects failures such as brake resistor and resistor cable short-circuits, chopper short-circuit, and calculated resistor over-temperature.

Control of the mechanical brake

Mechanical brake control is integrated into the ACS380 machinery drives. It uses state machine logic to control brake opening, closing, holding, wait and delay to integrate complex brake operation into the application.

Brake resistor

The brake resistors are separately available for the ACS380. Resistors other than the standard option resistors may be used, provided that the specified resistance value is within the specified limits and that the heat dissipation capacity of the resistor is sufficient for the drive application (see hardware manual). No separate fuses in the brake circuit are required if the conditions for e.g., the mains cable is protected with fuses and no mains cable/fuse overrating takes place.

Braking resistors

Dynamic Braking Using the Built-in Braking Chopper (Transistor)

All ACS380 drives include a built-in brake chopper for use with a braking resistor to perform dynamic braking. No separate option kits need to be selected, no additional panel space is required, no additional installation time is needed to assemble a brake chopper. No separate fuses in the brake circuit are required if the mains cable is protected with fuses and no mains cable/fuse overrating takes place.

Use the following tables to select the correct brake resistor for your application. Either compact CR type resistors (for smaller drives) or standard enclosed resistor packages are available. For more information regarding the selection of other braking resistors and the limits of the built-in brake chopper, see the ACS380 Hardware Manual 3AXD50000029274.

Input reactors

Applications

Line side power conditioning for AC motor controls to prevent unwanted harmonics and nuisance drive trips as well as to prevent excess current during line disturbances that can damage power semi-conductors. There should be a minimum impedance associated with the drive using either AC or DC magnetics. In many applications, this impedance can come from a supply transformer, or if long enough, the supply cable themselves. In most cases, however, the use of an additional input reactor is recommended.

Features

UL Listed Open, UL Listed Type 1 and UL Listed Type 3R construction with connection terminals. 3% and 5% impedance rating at rated current. UL Listed reactors below 80A include lugs. Lugs are not included with reactor above 80A.

Drive input current with and without input reactor

Wt - weight

dv/dt output filters

Applications

V1k Output Filters provide motor protection by limiting voltage spikes to 1,000 volts, or below, for long motor cable applications. Greatly extends the life of the motor and cable for all applications up to 1000 feet. For multi-motor applications note that motor lead length is cumulative and the 1000 foot limit still applies. 30% reduction in common mode current.

Features

UL Listed Open, UL Listed Type 1 and UL Listed Type 3R construction with connection terminals.

Note: The drives internal EMC filter must remain disconnected when using these filters. When applying these output filters the drive output frequency is limited to 60Hz.

Need a motor? This is our offering.

Our machinery drives control virtually any type of AC motor including induction, permanent magnet, servo and synchronous reluctance motors. Our adaptable machinery drives ensure an energy efficient and reliable motor controller with significant cost savings for the user.

Machinery drives and induction motors form a reliable combination

Induction motors are used throughout the industry in several types of industry applications which demand robust and high enclosure motor and drive solutions. The ACS380 machinery drives fit perfectly together with this type of motor, used in a wide range of industrial environments.

Machinery drives and permanent magnet motors for smooth operation

Permanent magnet technology is often used for

improved motor characteristics such as energy efficiency, compactness and control performance. Actual characteristics between different permanent magnet motors can vary considerably. Machinery drives can control ABB's and most other permanent magnet motors in an efficient way.

Machinery drives and IE4 synchronous reluctance motors for a package with high efficiency

Combining the machinery drives control technology with our synchronous reluctance (SynRM) motors provides an IE4 motor and drive package that gives you great energy savings benefits. The key is in the rotor design. The synchronous reluctance rotor replaces the traditional induction rotor and requires no permanent magnets. ABB has tested the SynRM motor and drive packages and produced manufacturer's statements providing verified system (drive and motor efficiency).

Save time, ease troubleshooting and improve drive performance

Better connectivity and user experience with Drivetune

Drivetune for commissioning and managing drives

A lifetime of peak performance

You're in control of every phase of the life of your drive. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout your drive's lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

ABB drives life cycle phases explained:

	Active	Classic	Limited	Obsolete
	Full range of life cycle services and support		Limited range of life cycle services and support	Replacement and end-of-life services
Product	Product is in active sales and manufacturing phase.	Serial production has ceased. Product may be available for plant extensions, as a spare part or for installed base renewal.	Product is no longer available.	Product is no longer available.
Services	Full range of life cycle services is available.	Full range of life cycle services is available. Product enhancements may be available through upgrade and retrofit solutions.	Limited range of life cycle services is available. Spare parts availability is limited to available stock.	Replacement and end-of-life services are available.

Keeping you informed

We notify you every step of the way using life cycle status statements and announcements.

The benefit for you is clear information about the status of your drives and the exact services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

Step 1

Life Cycle Status Announcement

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

Step 2

Life Cycle Status Statement

Provides information about the drive's current life cycle status, the availability of product and services, the life cycle plan, and recommended actions.

Services to match your needs

Your service needs depend on your operation, life cycle of your equipment and business priorities. We have identified our customers' four most common needs and defined service options to satisfy them. What is your choice to keep your drives at peak performance?

Is uptime your priority?

Keep your drives running with precisely planned and executed maintenance.

Example services include:

- ABB Ability Life Cycle Assessment
- Installation and Commissioning
- Spare Parts
- Preventive Maintenance
- Reconditioning
- ABB Drive Care agreement
- Drive Exchange

Operational efficiency

Is rapid response a key consideration?

If your drives require immediate action, our global network is at your service.

Example services include:

- Technical Support
- On-site Repair
- ABB Ability Remote Assistance
- Response time agreements
- Training

Rapid response

Drives service

Your choice, your future

The future of your drives depends on the service you choose.

Whatever you choose, it should be a well-informed decision. No guesswork. We have the expertise and experience to help you find and implement the right service for your drive equipment. You can start by asking yourself these two critical questions:

- Why should my drive be serviced?
- What would my optimal service options be?

From here, you have our guidance and full support along the course you take, throughout the entire lifetime of your drives.

Need to extend your assets' lifetime?

Maximize your drive's lifetime with our services.

Example services include:

- ABB Ability Life Cycle Assessment
- Upgrades, Retrofits and Modernization
- Replacement, Disposal and Recycling

Life cycle management

Your choice, your business efficiency

ABB Drive Care agreement lets you focus on your core business. A selection of predefined service options matching your needs provides optimal, more reliable performance, extended drive lifetime and improved cost control. So you can reduce the risk of unplanned downtime and find it easier to budget for maintenance.

We can help you more by knowing where you are!

Register your drive at www.abb.com/drivereg for extended warranty options and other benefits.

Is performance most critical to your operation?

Get optimal performance out of your machinery and systems.

Example services include:

- ABB Ability Remote Services
- Engineering and Consulting
- Inspection and Diagnostics
- Upgrades, Retrofits and Modernization
- Workshop Repair
- Tailored services

Performance improvement
