

Unearth energy savings
without having to dig
deep.

Imagine a 30 percent reduction in the energy consumed by conveyors, crushers, mills, fans and pumps used throughout your mine. ABB's ACS 2000 variable speed drive could be the answer. For motor-driven applications, the drive replaces fluid couplings, throttling or damping devices saving energy, lowering emissions, reducing maintenance costs and improving process performance. The drive can be operated without input isolation transformer with line voltages from 4.0 to 6.9 kV, saving capital cost and floor space. To learn more about the ACS 2000 variable speed drive, visit www.abb.com/drives
