
Major bank makes smart investment in ABB Emax 2 to safeguard power supply

APPLICATION

Back-up power generators

COUNTRY / CUSTOMER / SITE

Italy / A major EU economy's central bank

CUSTOMER NEEDS

Upgrade the back-up power at the bank's headquarters, increasing security and system resilience to ensure they can operate as a standalone microgrid if the utility power should fail for any reason. Having several layers of redundancy guarantees security systems stay online and transactions can proceed as normal

SOLUTION

Emax 2 simplifies the control and protection coordination of microgrids. For critical power applications like banks, it is the smartest ways to give power supplies an extra layer of resilience without additional genset investments
