

Moving Iron Indicators for sinusoidal or nonsinusoidal AC currents or voltages

Inputs

- For sinusoidal or nonsinusoidal AC currents or voltages, up to 100 A and 600 V directly

Overload capability

- Up to quintuple

Formats

- Square indicators
48 x 48 mm; 72 x 72 mm; 96 x 96 mm;
144 x 144 mm
- Edgewise indicators
72 x 36 mm; 96 x 48 mm; 144 x 72 mm
- Triple indicators
192 x 96 mm
- Contact indicators
96 x 96 mm

Mounting orientation

- Edgewise indicators upright or transverse format

Contact indicator (96 x 96 mm)

- 1 or 2 contacts (min., max.)

Excellent environmental and mechanical capabilities

General data

Standards

The indicators comply with DIN EN 60051 and with the safety regulations according to DIN EN 61010-1.

In the sections below you can find a short description of the most important parts of these regulations regarding the construction and the characteristics of electrical measuring instruments.

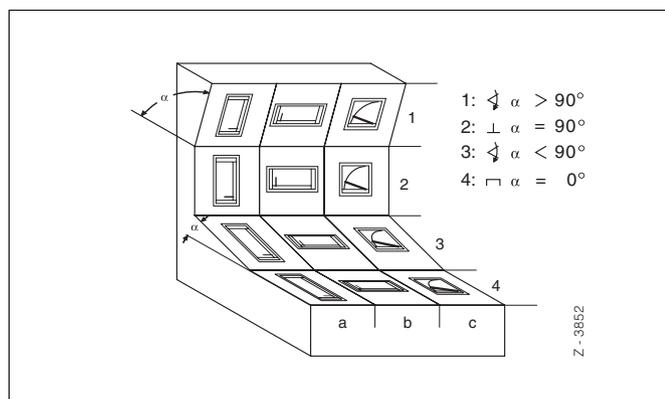

Measured error

The measured error of an indicator or its accessories is given by the limits through basic errors and effects.

The indicators comply with Class 1.5, if no other measured error rating has been given for specific types. Optionally, indicators can also be supplied for higher class measured errors, if this is possible. The class involved is always stated on the scale.

Mounting orientation

Generally, the nominal position is indicated by a position symbol. For indicators without such a position identification, the reference range is any vertical or horizontal position. The nominal mounting orientation is 5° in every direction of the reference position. Note that the effect (in addition to the indicated error) must not be greater than 50 % of the respective classified error.

Temperature effect

If not otherwise stated, the reference temperature is 23 °C ± 2 K for indicators of Class 0.5 to 5. The additional error for a nominal range of ±10 K within this temperature range must not exceed the classified error.

General technical specifications

Measured error

Class 1.5 to DIN EN 60051

Measuring ranges

The measuring ranges comply with DIN 43701 (standardized progression: 1 - 1.5 - 2.5 - 4 - 6 and their decadic multiples), see the respective codes in the measuring range tables

Mounting orientation

vertical, if not otherwise specified, 2a...2c in the illustration

Connection

directly or via transformer

Ambient temperature

23 °C ± 2 K

Temperature influence

< 1 %/10 K

Front frame

to DIN 43700
exchangeable front pane (only for square instruments with plastic housings)

Front color

black, RAL 9005

Environmental conditions to DIN EN 60721-2-1, 2, 5

Conditions	Permissible variables	
	Normal measuring instruments → H, Y, G	Relatively tropicalized instruments → H, V, F
Operating temperature	-25...+40 °C	-25...+55 °C
Relative humidity	max. 85 %, but not more than 60 days per year, otherwise 75 %, annual average 65 % (max. temperature +27 °C)	max. 95 %, but not more than 30 days per year, otherwise 85 %, annual average 75 % (max. temperature +25 °C)
Condensation	none	none

Mechanical category to DIN EN 60068

Vibration = Part 2-6

normal version
frequency range 5...55 Hz
acceleration max. 2.5 g
No. of cycles 5
runtime 1 octave per minute

Shock = Part 2-27

normal version
acceleration max. 15 g
time of action 11 ms

Scale and pointer design

The scales and pointers for square, circular, vertical or horizontal scales comply with DIN 43802, Parts 2 and 4.

Type of protection

If not otherwise specified, the indicators comply with DIN EN 60529

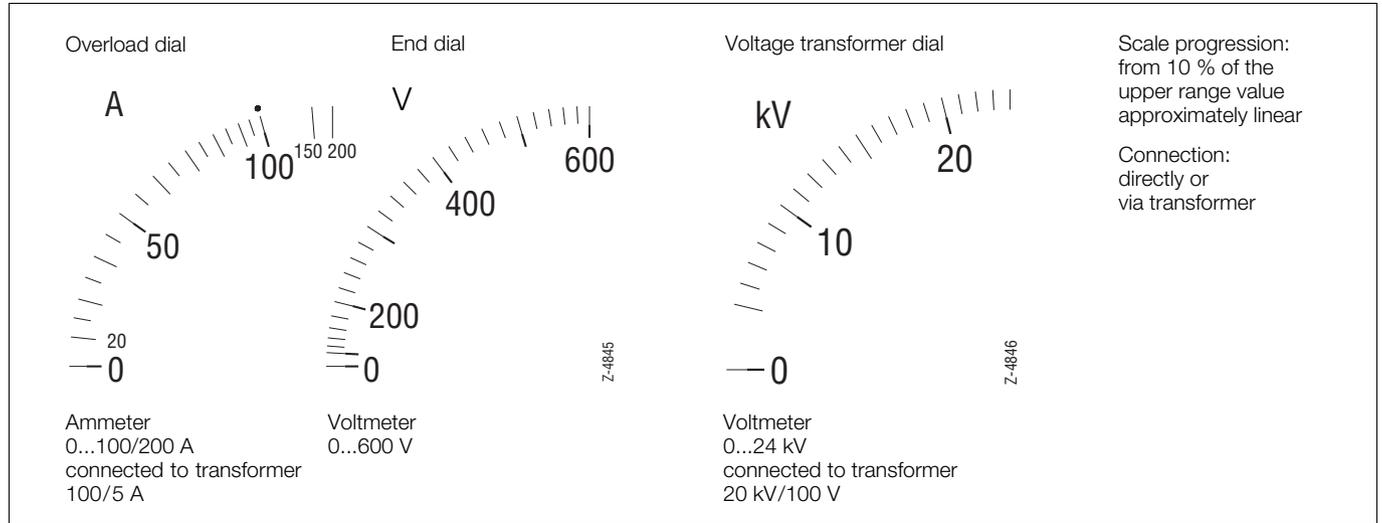

- IP 52 for case
- IP 00 for terminals

Application range

Square indicators

15...100 Hz

Moving iron indicator dials

Dimensional drawings

Contact indicators (96 x 96 mm)

Application

The contact indicator FO 96 with one or two alarm values is installed in a sheet metal case and is suitable for monitoring currents or voltages.

It is equipped with one or two relay outputs with change-over contacts. The contacts are optionally available as min. or max. contacts, so there are five different versions:

- **Min.** minimum contact
- **Max.** maximum contact
- **Min./Max.** minimum and maximum contact
- **Min./Min.** minimum and early warning contact
- **Max./Max.** maximum and early warning contact

The standard version relays operate according to the NC operating principle: they open, when an alarm limit is exceeded or fallen below or in case of a power failure. Optionally, the devices are available with NO contact operation.

Functional principle

Moving iron mechanism with M-core system, silicon oil damping and resilient jewel bearing. Integrated components optically measure the set alarm values via the pointer position and control the potential-free relay outputs.

Technical data

Contact indicators

current: 15...400 Hz; voltage: 5...100 Hz

Power supply

24 V DC (21 ...27 V)
 115 V AC ±10%, 48...62 Hz
 230 V AC (198...242 V), 48...62 Hz

Power consumption: max. 1.2 VA

Electrical isolation: between measuring circuit and power circuit

Measured error

Threshold value: ± 1 % of scale length

Repeatability: < 0.2 % of scale length

Switching difference: < 1 % of scale length

Outputs

1 change-over contact per alarm contact, max. switching capacity for resistive load

Switching voltage: 230 V DC

Switching current: 4 A

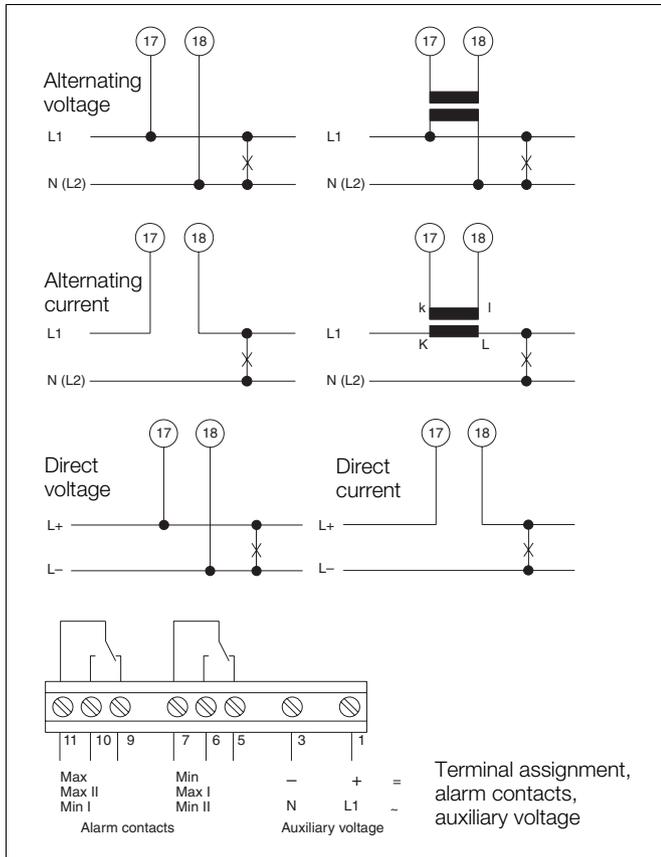

Switching capacity: 920 VA

Life span for rated load: 2 × 10⁶ operating cycles

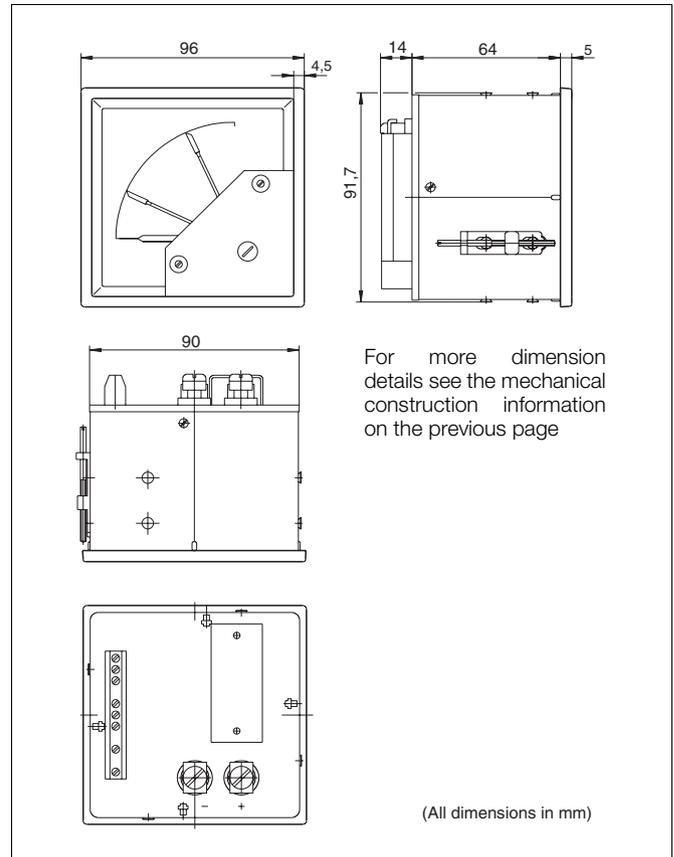

Mechanical life span: 10⁷ operating cycles
