

A reliable link between wind and grid?

Absolutely.

ABB's substation systems, from turnkey projects to advanced MicroScada® substation automation systems, provide cutting-edge technology solutions to integrate wind power into the grid, increasing reliability and energy efficiency, whether the farm is 10 MW or 100 MW, onshore or offshore, or subject to harsh weather conditions. This technological leadership, together with our first quality service, engineering, and project management expertise, makes ABB the partner of choice for new wind farm projects, as well as for upgrading existing ones. Every day the world demands more energy produced by renewable resources and ABB makes it possible. For more information visit www.abb.com/windpower.
