

BUSINESS AREA: MOTION

ABB IEC Low Voltage Motors

Facts & Figures

ABB's IEC Low Voltage Motors Division offers a comprehensive portfolio of low voltage motors compliant with all major markets globally. We define product innovation as "always pushing the boundaries of energy efficiency" – delivering better solutions for our customers that use less energy, lower emissions and increase the value for our customers in a sustainable way for the planet. Our standard and customized offering is available for any industry and application, including some in the most demanding environments. ABB IEC Low Voltage Motors Division operates in more than 50 countries.

Revenues

\$750–1,250 million

Market position

No. 2 globally in low voltage motors

Key market drivers and trends

- **Efficiency and regulation:** Increase of electricity consumption and new efficiency regulations implementation in mid-2021 to mandate IE3 both in EU and China.
- **Digitalization:** Manufacturers to support additional intelligence in motors via connectivity and predictive maintenance capability.
- **Market opportunities:** Recovery of heavy process sectors and E-mobility growth.

Market

~ \$10 billion
