

Automation Sentinel

Protecting your past, present and future automation investment

ABB's **Automation Sentinel** Software management programme extends support to your existing ABB Control system software and provides an affordable evolution path to ABB's next generation of control system, Extended Automation (800xA).

Automation Sentinel sets the industry Gold Standard for the evolution of your system software, providing complete life-cycle support - "cradle to cradle".

Automation Sentinel enables you to install ABB's latest software offerings at a pace that is appropriate to your operational and business requirements.

System 800xA is the next generation offering for all ABB control systems; our evolution path with **Automation Sentinel** allows you to incrementally add selected 800xA functionality to expand your existing system to maintain this technology at the leading edge.

Automation Sentinel helps you get the most out of your Automation investment:

- Keeps your existing system updated with the latest software technology.
- Assists Evolution to ABB's 800xA System in an economical stepwise manner
- Provides Web access to "Solutions Bank" Technical Support.
- Provides enhanced support services, including phone support.
- Facilitates updates and upgrades of your system in the most economical manner.
- Enhances the original "Softcare" product

Automation Sentinel is the latest step in ABB's ongoing commitment to help you get the most value out of your current ABB control system, and once on the 800xA path, it provides you with a path to maintain this investment.

Automation Sentinel is a simple, safe and secure programme that puts YOU in control.

To help you start on the evolution ladder we have a special offer during 2007. Customers taking out a 3 year Sentinel agreement will be entitled to a 100% discount on the equivalent 800xA system licences for evolution at any convenient time, based on a continuous valid agreement, at time of request.
