

Course description

F652

The diversity and productivity of the STRIEBEL & JOHN energy distribution systems

Course Duration

The duration is one day

Course Type

This is a classroom course led by a trainer with a maximum of 7 participants.

Course Goal

- You are familiar with the STRIEBEL & JOHN Main Catalogue
- You have gained fundamental product knowledge
- You are able to work out detailed solutions
- You are familiar with and able to handle the software tool PDC
- You are aware of additions and modifications regarding the product range

Student Profile

The course is intended for installers (electricians) and panel builders, planners and constructors of electrical assemblies, electrical wholesale employees, and interested professionals.

Prerequisites and Recommendations

The student must have basic electro technical knowledge.

Main Topics

From consumer units, compact distribution boards, wall-mounting and floor-standing cabinets, through to switchgear cabinets you gain a comprehensive overview of the STRIEBEL & JOHN product range. As a participant you also get to know installation and mounting advantages, as well as practical detail solutions as you become familiar with the STRIEBEL & JOHN system technology.

- Innovations of the consumer units and compact distribution boards
- Fire protection enclosures
- Wall-mounting, floor-standing, and switchgear cabinets for distribution
- The distribution panel system CombiLine-M
- Presentation of the PDC panel design configuration software
- Tour of the production facilities
