Purpose and function

The leak guard can monitor the possible water leakage from dishwashers, hot water heaters or any other machine or equipment. When properly installed, the leak guard will report water leakage before it can be detected by other means.

When water or moisture appears between correctly installed sensor wires, a small current starts to flow between the wires. The leak guard detects the current and triggers an alarm. The leak guard light starts flashing and the indicator light / buzzer / beeper is triggered. The alarm can be silenced with the silencer button on the unit. However, the light of the leak guard remains on without blinking until there is no more moisture between the sensor wires.

The leak guard has two function selectors, “M” and “R”, which can be used to adjust the unit's functioning.

The leak guard controls the leakage current passing through the sensor. Increasing the number of sensors increases the leakage current rate, making the alarms more responsive.

![Diagram of leak guard installation](attachment:image.png)
Sensor

Suitable sensors for the leak guard are tape sensor FLA2100 or any other uninsulated pair of semiconductor cables isolated from each other. Please note that the insulation mustn't be watertight. For example, the sensor can be made using two ML 1.5 wires with the coating peeled off around the monitored area, which are then attached to the floor under a dishwasher with suitable screws, nails, fasteners or gluing points. During the installation, note that any humidity or water to be detected will have to touch both wires simultaneously.

Function selector “M” (memory function):
- When the selector is set to “-”, the memory function is inactive. The alarm disappears when there is no longer any moisture between the wires.
- When the selector is set to “M”, the alarm will not disappear until manual reset, even when there is no longer any moisture.

Function selector “R” (magnetic valve control):
- When the selector is set to “OFF” (the prongs are short-circuited), the alarm reset releases the magnetic valve.
- When the selector is set to “ON” (the prongs are not short-circuited), the magnetic valve is released only after the alarm is acknowledged and the sensor is dry.

Note! If an operator switch is used in the feeder circuit, all poles must be disconnected. Accidental disconnection of the system must be prevented.
Purpose and function

This system is designed for WC facilities for people with reduced mobility and others in need of assistance.

When the alarm button is pressed or the pullcord is pulled, the indicator light outside the WC facilities will blink and the buzzer will sound intermittently. Each button has an indicator light that lets the user know that the request for assistance has been successfully made. The alert remains in effect until it is reset with the button beside the WC door.

- The cord must be left long enough to touch the floor
- Installation above the WC door on the outside
- Control unit with reset button
- Transformer always installed in its own mounting box
- Double protective insulation between the primary and secondary coils is ensured by a protective tube
Special features of the system:
- Fully expandable and adaptable

Note! If an operator switch is used in the feeder circuit, all poles must be disconnected. Accidental disconnection of the system must be prevented.

Accessible toilet alarm (FEH1001)
Special features of the system:
- Fully expandable and adaptable
Purpose and function

This system is designed for WC facilities for people with reduced mobility and others in need of assistance. In addition, the system has a light panel that can centrally detect alerts.

When the alarm button is pressed or the pullcord is pulled, the indicator light outside the WC facilities will blink and the buzzer will sound intermittently. The indicator light can detect which WC the alert is coming from and it has a buzzer that can be reset with the button. The alert remains in effect until it is reset with the button beside the WC door.

Special features of the system:
- The system is equipped with a signaling panel which shows centralized alerts
- The cord should be left long enough to touch the floor
- Installation above the WC door on the outside
- Control unit with reset button
- Transformer always installed in its own mounting box
- Double protective insulation between the primary and secondary coils is ensured by an insulation tube
- Buzzer with push button
- Six indicator lights

Purpose and function

This system is designed for WC facilities for people with reduced mobility and others in need of assistance. In addition, the system has a light panel that can centrally detect alerts.

When the alarm button is pressed or the pullcord is pulled, the indicator light outside the WC facilities will blink and the buzzer will sound intermittently. The indicator light can detect which WC the alert is coming from and it has a buzzer that can be reset with the button. The alert remains in effect until it is reset with the button beside the WC door.

Special features of the system:
- The system is equipped with a signaling panel which shows centralized alerts
Accessible toilet alarm (FEH1001) with follow-up alarm

Special features of the system:
- The system is equipped with a signaling panel which shows centralized alerts.

Additional rooms can be connected.
Purpose and function

The necessary products for the disabled WC emergency call system are also available as a set with one EAN code.

- **JUSSI** Disabled WC set FJW1004 EAN: 6418677332012
- **IMPRESSIVO** Disabled WC set FJW1004-84 EAN: 6438199002934

**WIRING:**

A = E.G. 2x1,5  
B = E.G. MHS 1 x 4 x 0,5  
KLM 4 x 0,8  
KLMA 4 x 0,8 + 0,8

**Button** FAP2001 EAN: 6410070607216  
- At least one call button at the floor boundary

**Pullcord button** FAP3002 EAN: 6410070607261  
- The cord should be left long enough to touch the floor

**Reset button** FAP2001 EAN: 6410070607216

**Alarm, single-loop** FEH2001 EAN: 6410070607179

**Transformer 230V / 15V / 2VA** FLM1000 EAN: 6410070607650  
- Transformer always installed in its own mounting box  
- Double protective insulation between the primary and secondary coils is ensured by an insulation tube

**JUSSI set**

**Special features of the system:**

- Fully expandable and adaptable
Note! If an operator switch is used in the feeder circuit, all poles must be disconnected. Accidental disconnection of the system must be prevented.

Accessible toilet alarm (FEH2001)

Special features of the system:
- Fully expandable and adaptable
Purpose and function

This system is designed for WC facilities for people with reduced mobility and others in need of assistance.

When the alarm button is pressed or the pullcord is pulled, the indicator light outside the WC facilities will blink and the buzzer will sound intermittently. Accessible toilet alarm (FEH2001) with follow-up alarm

- At least one call button at the floor boundary
  FAP2001 EAN: 6410070607216

- The cord should be left long enough to touch the floor
  FAP3002 EAN: 6410070607261

- Alarm, single-loop
  FEH2001 / EAN: 6410070607179

- Indicator light panel
  FIM1300 / EAN: 6410070607537

- Button / buzzer
  FIP1011 / EAN: 6438199005225

Special features of the system:
- Centralized control with FIM1300 indicator panel
Accessible toilet alarm (FEH2001) with follow-up alarm

Special features of the system:

- Centralized control with FIM1300 indicator panel
Purpose and function

The Busy light can be used as a “Do not disturb” indicator for example for conference rooms. The LED indicator light outside the room can be controlled with a switch inside the room.

WIRING: B = E.G. MHS 1 x 4 x 0.5 A = E.G. MMJ 3 x 1.5S

Transformer 230V / 15V / 2VA
FLM1000 / EAN: 6410070607650

Indicator light
FIM1000 EAN: 6410070607513

Switch
FAK1021 EAN: 6438199005218
Note! If an operator switch is used in the feeder circuit, all poles must be disconnected. Accidental disconnection of the system must be prevented.
Purpose and function

The Busy light can be used as a “Do not disturb” indicator for example for conference rooms. A switch inside the room can be used to turn on the outside LED indicator.

WIRING: A = E.G. MMJ 3 x 1.5S

2-switch
1062UC-84 EAN: 6438199001180
8370R  EAN: 6438199004860

Indicator light
2661.02  EAN: 6418677334382
V-84      EAN: 6418677330100
Note! If an operator switch is used in the feeder circuit, all poles must be disconnected. Accidental disconnection of the system must be prevented.
Purpose and function

An assistance request system for elderly people home or assisted living with room-specific or area-specific buttons for assistance requests. The caregiver receives alerts in the indicator light panel in the office.

Each room is equipped with alarm buttons at the appropriate locations. The alerts are centrally managed. When an alarm is sounded, the buzzer sounds and the indicator light panel indicates the location of the alert. Once the alert has been verified, the buzzer can be silenced with the reset button. After verification, the alert is reset using the reset button in the room where the alert was triggered.
Assisted living system

EMERGENCY ALERT SYSTEM
Purpose and function

The emergency alarm system is highly suitable for basic protection against threats for employees in public buildings and offices.

Each room has two alarms, one on the inside and the other outside the room. When the alarm button is pressed in the room, a warning light is activated outside the room. Nothing happens inside the room. Simultaneously, the alarm is sounded within the other office to alert colleagues that help is needed. The alarm is acknowledged with the reset button in the room. The alarms can also be installed in other areas as necessary.

WIRING: MHS 1 x 4 x 0,5 or NOMAK 2 x 2 x 0,5 or KLM 4 x 0,8

- Indicator light
  FIM1000 EAN: 6410070607513
