T142
Safety Instrumented Systems TÜV Functional Safety Engineer

Learn the principles and requirements of Functional Safety according to IEC 61508 / IEC 61511. This includes the complete safety lifecycle in the context of Safety Instrumented Systems (SIS) projects.

Course type and methods
This is an instructor led course with interactive classroom discussions and practical examples of implementation of safety systems.

Student Profile
This training is targeted to control, instrumentation and application engineers who will be involved in executing safety instrumented system projects covering any phase of the safety lifecycle from hazard and risk assessment, through engineering and design to operations and maintenance.

Prerequisites
In accordance with the TÜV Rheinland Functional Safety program, to be accredited students shall have:
• Minimum 3 yrs field experience in functional safety
• University degree or equivalent engineering experience and responsibilities as certified by employer or engineering institution.

Course objectives
Upon completion of this course the participants will be able to:
• Describe principles of Functional Safety Management & key features of IEC 61508/IEC 61511
• Describe the requirements of the Safety Lifecycle
• Explain and determine Safety Integrity Levels (SIL) with different methods
• Outline the key deliverables from the Safety Lifecycle, roles and responsibilities
• Describe a Safety Requirement Specification
• Appreciate the need for Safety Lifecycle processes, procedures, methods and techniques
• Explain and determine key factors used in the SIS engineering and design such as Random Hardware Failure, Architectural Constraints and Systematic Capability
• Tell main differences between IEC61508 Editions 1&2

Main topics
• TÜV Functional Safety program
• Background on Functional Safety
• Regulations and Safety standards
• IEC 61508 and IEC 61511
• Management of Functional Safety
• Competency management
• Safety Lifecycle phases and planning
• Hazard and risk analysis
• Target SIL determination methods
• Safety requirement specification
• SIS design and development
• Probability calculation
• Selection of components, subsystems
• Proven in use - aspects
• Verification, validation, audit and assessment
• Operations, maintenance and modifications
• Continuous review and improvement

Duration
The duration is 4 days consisting of 3 days of tuition with an examination on the fourth day.
