

Course description

G794 DriveMonitor™ Operation and Maintenance training

Course goal

The goal of this course is to train the participants how to use DriveMonitor™ for fast and efficient troubleshooting of a drive system. The use of this diagnostic tool is taught by practical exercises.

Learning objectives

- Upon completion of this course the participants will be able to:
- Describe the DriveMonitor™ hardware versions and the communication structure
- Use DriveMonitor™ to collect all necessary information for drive system troubleshooting
- Perform easy troubleshooting tasks for DriveMonitor™

Participants

Electricians and technicians of end customers, who operate, maintain or troubleshoot ABB drive systems

Prerequisites

- Basic knowledge of ABB MV drives (recommended to attend this course after drive operation and maintenance training)
- Laptop recommended

Topics

- Hardware description
- DriveMonitor™ functions
- DriveMonitor™ troubleshooting
- Practical exercises

Methods

Lectures and demonstrations
Practical exercises with training equipment

Duration

1 day
Max. 8 participants
Tailor-made and on-site training courses on request

Enrollment

Participants are kindly requested to apply online for public courses. Custom-tailored training courses are only available on request.

Classroom training

Hands-on training
