Read and understand this document

Please read and understand this document before using the products. Please consult your ABB JOKAB SAFETY representative if you have any questions or comments.

Suitability for use

ABB JOKAB SAFETY shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customers application or use of the product. At the customer’s request, ABB JOKAB SAFETY will provide applicable third-party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE ABB JOKAB SAFETY PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

1 Introduction

1.1 Scope
The purpose of the product manual is to describe the safety mat and to provide the necessary information required for installation and use.

1.2 Audience
This document is intended for authorized users.

1.3 Prerequisites
It is assumed that the reader of this document has knowledge of the following:
- Basic knowledge of ABB Jokab Safety products.
- Knowledge of machine safety.

1.4 Special notes
Pay attention to the following special notes in the document:

⚠️ Warning! Danger of severe personal injury!
An instruction or procedure which, if not carried out correctly, may result in injury to the technician or other user.

⚠️ Caution! Danger of damage to the equipment!
An instruction or procedure which, if not carried out correctly, may damage the equipment.

ℹ️ Note! Important or explanatory information.
2 Overview

2.1 General description
The safety mat is used as personal protection within the hazardous areas around presses, robots, production lines, machines etc. When connected to a suitable safety control unit, stepping on the safety mat will immediately be detected causing hazardous machine movements to be stopped. This is made possible by the detection of electrical contacts closing within the sandwich construction. The safety mat is provided with a slip-free surface. The safety mat and its connection cabling are to be monitored by a suitable ABB AB Jokab Safety safety control unit, Sentry or Pluto.

2.2 Safety regulations

⚠️ Warning! Carefully read through the entire manual before using the device.
⚠️ Warning! The devices shall be installed by a trained electrician following the Safety regulations, standards and the Machinery directive.
⚠️ Warning! Failure to comply with instructions, operation that is not in accordance with the use prescribed in these instructions, improper installation or handling of the device can affect the safety of people and the plant.
⚠️ Warning! For installation and prescribed use of the product, the special notes in the instructions must be carefully observed and the technical standards relevant to the application must be considered.
⚠️ Warning! In case of failure to comply with the instructions or standards, especially when tampering with and/or modifying the product, any liability is excluded.
⚠️ Warning! The safety mat is NOT intended for wheeled vehicles.
⚠️ Warning! The safety mat is NOT intended for children, or persons weighing < 20 kg.
3 Installation and maintenance

3.1 Safety mat – general

The safety mat is made up of a sandwich construction; the pressure contact switch consisting of two conducting sheets separated from each other by a webbed isolating layer. The internal switching surface is cast into a durable polyurethane to protect against moisture and is then covered with a top layer of slip-free rubber mat. Attachment to the floor is by means of a ramped rail. Two cable exits are provided. These cables consist of one M8 male plug and one M8 female plug in standard construction.

![Safety mat cross section](image)

1) Polyurethane incl. structure surface
2) Contact plate 2
3) Isolation layer
4) Contact plate 1

Figure 1: Safety mat cross section
### 3.2 Operation principle

The safety mat is fitted with two two-core connecting cables where both ends are connected to the safety control unit. Different dynamic signals are used in each of the two cores. This connection makes a safety circuit where the safety control unit provides the monitoring of the entire circuit including the cabling route and the safety mat.

The two surfaces of the safety mat make contact when stepped on, causing a short circuit which is detected by the safety control unit. This immediately causes the safe outputs to be turned off. The entire switching circuit is at the same time monitored for damage to cables or manipulation.

If several safety mats are to be connected to one safety control unit, they need to be connected in series.

4) Safe output
5) Voltage supply
6) Safety control unit

Figure 2: Setup of connected safety mats
3.3 Installation of safety mats

**Caution!** The safety mats shall not be broken or bent. Safety mats must not be rolled/twisted or modified in any way. It is also essential that safety mats are not cut into any shape or shortened following delivery. The mounting surface must be absolutely even, clean and dry. Safety mats should not be glued on the bottom.

**Warning!** The safety mat shall be installed with a minimum safety distance according to EN ISO 13855.

Place the safety mat in required position with the ground plate downwards. If more than one safety mat is to be installed, make sure to place the safety mats tight together without space.

![Correct!](image1) ![Incorrect!](image2)

Figure 3: Handling of safety mat

Safety mats with cast-in rubber edge trim can be secured to the floor by screws straight through the ramp rail.

For safety mats with an aluminum edge trim refer to section 3.3.1.3 ‘Assembly of ASK mats with aluminum rail’ for installation instructions.

The safeguarded area (same as ordered size) on a safety mat with a ramp rail is the dimensions of the safety mat without the ramp rails. Therefore, the width of the edge trim (for example 35 mm for mats with cast-in rubber edge trim) must be added for each ramp rail side to get the over-all dimension for the floor space. The ramp rail serves for fixation to the ground.

Maximum producible size of a safety mat is 2350 mm x 1350 mm. All dimensions larger than this must be realized by using several safety mats.
3.3.1 Aluminum ramp

![Diagram of Aluminum ramp](image)

3.3.1.1 Ramp rail RS 14

The ramp rail RS 14 provides secure mounting capability for the safety contact mat. The angled design reduces tripping and slipping when mounted to the mat. The integrated channel can be used for clean and safe installation of the connecting cable.

<table>

<tr>
<td>Weight: Approx. 788 g/m</td>
</tr>
</tbody>
</table>

![Figure 5: Ramp rail RS 14](image)

3.3.1.2 Mounting rail BS 14

The mounting rail BS 14 can be used to attach the safety contact mat in less accessible areas (for example at machines, shut-off positions, walls, etc.). The integrated channel can also be used for clean and safe installation of the connecting cable.

</tbody>
</table>

![Figure 6: Mounting rail BS 14](image)
3.3.1.3 Assembly of ASK mats with aluminum rail

When using corner connectors, the ramp rail must be shortened around 20 mm for each corner connector.

The corner connector nearest the cable is to be mounted from above over the cable in such a way that the cable is guided safely in the cable duct (figure 7). Afterwards drill and fasten it to the bottom with 6 mm dowel and suitable screw.

Push the ramp rails laterally to the mat and then on the fixation-pin of the corner connector (figure 8). Mark the fastening points along the marking groove on the rail and pre-drill 10 mm for the intended plugs. Fasten the rails on the bottom with 6 mm dowels and suitable screws (approx. 60 cm between the screws) and close the openings with the plugs (figure 9).

Push the corner connectors laterally to the mat and then the fixation-pin into the rail (figure 10). Afterwards drill and fasten it to the bottom with 6 mm dowel and suitable screw.

At the machine side the conclusion takes place via the adjustment with the mounting rail BS 14. Fasten the rail to the bottom with 6 mm dowels and suitable screws (approx. 60 cm between the screws). If possible bring out the cable laterally and attach it to the safety control unit (figure 10).
3.3.2 Molded ramp

Cut out the cable output at appropriate side in a way that the cables coming out are not squeezed or sheared while placing the safety mat afterwards. Place and adjust the safety mat at the appropriate place. To provide against slipping use suitable screws and dowels on each side of the safety mat.
3) Cut out
4) Cables

Figure 14: Mounting of safety mat

To place several safety mats side by side, the relevant ramp rails have to be cut off. To do this, cut off the ramp rail with a knife in the given slit (B) (spray the knife and the cutting area with soapy water (A)).

Figure 15: Adjustment of safety mat

If needed, the ramp rail can be cut off also when safety mats not are joined together.
3.3.3 Electrical installation

Connect the safety mat electrically and check connection on the different cores (channels).

Figure 16: Several safety mats side by side

5) Connection cable with M8 female and male plug
6) Supplied cables with M8 female and male plug
3.4 Electrical connections

Figure 17: M8 Male pin configuration

Figure 18: M8 Female pin configuration

Figure 19: Safety mat electrical view

The safety mat shall be connected to an ABB Jokab Safety Sentry safety relay (USR10 or USR22) or Pluto safety-PLC (A20, B20, S20, D20, B22, D45, B46, S46, AS-i, B42 AS-i or O2) which monitors the functionality of the safety mat and detects any disconnections or short-circuits in the lines. Several safety mats can be connected in series while still retaining the same level of safety.

Note! For maximum safety mat area and maximum number of safety mats, see section ‘Technical Data’, ‘Mounting’ table.

When pressure is applied, the active surface of the contact area in the safety mat is closed and the safety output on the safety control unit trips.
3.5 Installation precautions

⚠️ **Warning!** All safety functions shall be tested before starting up the system.

3.6 Maintenance

⚠️ **Warning!** The safety functions and the mechanics shall be tested regularly.

⚠️ **Warning!** In case of breakdown or damage to the product, contact the nearest ABB Jokab Safety Service Office or reseller. Do not try to repair the product yourself since it may accidentally cause permanent damage to the product, impairing the safety of the device which in turn could lead to serious injury to personnel.

⚠️ **Caution!** ABB Jokab Safety will not accept responsibility for failure of the switch functions if the installation and maintenance requirements shown in this document are not implemented. These requirements form part of the product warranty.

**Custom-made safety mats**

When ordering a custom-made safety mat, two articles need to be ordered, one order code for the production cost and one for the square meter. When ordering, the size of the safety mat needs to be specified (X mm x Y mm).

Example:

One safety mat 0.5 x 0.5m:
