

Protection and control REX600

ONE DEVICE WITH **SEVERAL** APPLICATIONS

Introducing a compact, secure and cost-efficient protection and control device with merging unit functionality and backup protection. Seamless integration with ABB's centralized protection solution, SSC600, for reliable protection and control in utility and industrial substations.

- **Freely configurable** protection, control and measurement functions for a variety of applications
- Current based fault passage indication for secondary **substation applications**
- Supports the latest sampled value standards and merging unit standards for **interoperability in digital substations**
- **Improved cyber security** with secure boot - verifying firmware authenticity and integrity
- **DIN-rail mounting and compact design** for convenient installation and maintenance
