NOTES:

1. Prior to any installation in a classified hazardous location, verify installation methods by the Control Drawing referenced on the product’s name tag.

2. To access termination board, remove Power I/O Junction Box front cover.

3. In this configuration, an existing cable is removed from TB-1, 3B & 4B to avoid plugging into a battery by mistake.

4. Wire size is a function of the distance between the BTU-XMTR and the DC Power Supply. Using 2.5 Amps as the maximum current draw, calculate an adequate wire size so that the voltage measured at the BTU-XMTR’s Power I/O Junction Box is a minimum of 12.5 Volts.

Use 14 AWG for up to 50 Feet. For greater distances, SEE NOTE 4

Power Supply Enclosure

- 120V AC 50/60 Hz
- Remove this cable SEE NOTE 3

Sealed Conduit Fittings Or Approved Cable Fittings
