

Did you know we help Riyadh save millions of gallons of precious water?

The sprawling city of Riyadh stretches over 200 square miles, an area more than five times the size of Paris. In the past, about 60 percent of Riyadh's water supply disappeared through leakage in the 6000 miles of piping

that transported water to the city's 4.5 million population. ABB Measurement & Analytics has helped the National Water Company of Saudi Arabia reduce the losses by over 40 percent which is millions of gallons per day.
