

Enhancing energy efficiency without risking plant reliability.

ABB medium voltage variable speed drives bring the best energy efficiency, control and reliability out of any motor-driven application in the chemical, oil and gas industry. Featuring high reliability and performance, ABB's medium voltage drives are designed for applications such as pumps, fans, conveyors, compressors, mixers, centrifuges and extruders. By using ABB drives you can reduce your energy bill by up to 50 percent without compromising uptime or safety. To enhance a plant's productivity, visit www.abb.com/drives
