

ABB Power Care – 3. Diagnostic & Condition Assessment 3.0 Documentation of installed base and preliminary assessment

ABB Low Voltage Service is committed to understand thoroughly the plants that we manage under the ABB Power Care agreement.

During the initial stage of the agreement, the engineer visits the plant and substations to visually assess the conditions and document the equipment installed. Where applicable, ABB proprietary analysis tools will also be used to assess the conditions of breakers and switchgear. After the visit, a survey report is issued, together with a list of proposed remedy steps if unsafe conditions or equipment unavailability are detected.

The information gathered during the visit is populated into the ABB database. It is continuously updated. With the ABB Power Care agreement, the customer is able to recover this information at any time for reference.

Benefits:

- Condition assessment for understanding of the plant and equipment health
- Proposal for immediate and future actions where required
