

Low Voltage General Purpose Motors

Making you more competitive

ABB's General purpose motor is designed for use in general industry, meeting the demands of standard applications for OEM's. Motors are readily available from central stock locations and distributors around the world. The motors have high build quality, are available with all the features needed by the OEM market and can be modified to meet most specifications.

ABB (www.abb.com) is a leader in power and automation technologies that enable utility and industry customers to improve performance while lowering environmental impacts. The ABB Group of companies operates in around 100 countries and employs around 103,000 people.

General information

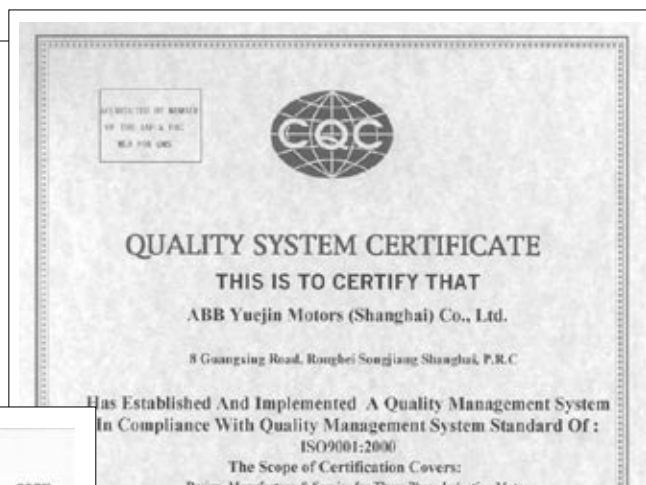

Standards

ABB motors are of the totally enclosed and open drip proof, single or three phase squirrel cage type, built to comply with international IEC and EN standards. Motors conforming to other national and international specifications are also available on request.

All production units are certified to ISO 9001 international quality standard as well ISO 14000 environmental standard and confirm to all applicable EU Directives.

Motors for EU motor efficiency levels

A Europe-wide agreement will ensure that the efficiency levels of electric motors manufactured in Europe are clearly displayed. In contrast to the American legislation on motor efficiency the European agreement does not establish mandatory efficiency levels.

It basically establishes three classes giving motor manufacturers an incentive to qualify for a higher class.

ABB is one of only a handful of leading motor manufacturers in Europe to have a motor range to meet or exceed the minimum efficiencies stated in the highest level of the EU agreement of LV motors.

These efficiency levels apply to 2- and 4-pole, three phase squirrel cage induction motors rated for 400V, 50Hz with S1 duty class with the output 1.1 to 90 kW, which

account for the largest volume on the market.

The efficiency of motors from different manufacturers are collated in a database, EURODEEM, published by the European Commission. It is accessible over the Internet at <http://iamest.jrc.it/projects/eem/eurodeem.htm>.

EU efficiency classes for 2-pole motors

Output kW	2-pole Boarderline	
	EFF2/EFF3	EFF1/EFF2
1.1	76.2	82.8
1.5	78.5	84.1
2.2	81.0	85.6
3	82.6	86.7
4	84.2	87.6
5.5	85.7	88.6
7.5	87.0	89.5
11	88.4	90.5
15	89.4	91.3
18.5	90.0	91.8
22	90.5	92.2
30	91.4	92.9
37	92.0	93.3
45	92.5	93.7
55	93.0	94.0
75	93.6	94.6
90	93.9	95.0

EU efficiency classes for 4-pole motors

Output kW	4-pole Boarderline	
	EFF2/EFF3	EFF1/EFF2
1.1	76.2	83.8
1.5	78.5	85.0
2.2	81.0	86.4

Cooling

Designation system concerning methods of cooling refers to standard IEC 60034-6.

Degrees of protection: IP code/IK code

Classification of degrees of protection provided by enclosures of rotating machines are refers to:

- Standard IEC 60034-5 or EN 60529 for IP code
- Standard EN 50102 for IK code

IP protection:

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also

protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water

IK code :

Classification of degrees of protection provided by enclosure for motors against external mechanical impacts.

Insulation

ABB uses class F insulation systems, which, with temperature rise B, is the most common requirement among industry today.

The use of Class F insulation with Class B temperature rise gives ABB products a 25° C safety margin. This can be used to increase the loading for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation life. For instance, a 10 K temperature reduction will extend the insulation life.

Class F insulation system

- Max ambient temperature 40° C
- Max permissible temperature rise 105 K
- Hotspot temperature margin + 10 K

Class B rise

- Max ambient temperature 40° C
- Max permissible temperature rise 80 K
- Hotspot temperature margin + 10 K

Insulation system temperature class

- Class F 155° C
- Class B 130° C
- Class H 180° C

Safety margins per insulation class

Frequency converter drives

Squirrel cage induction motors offer excellent availability, reliability and efficiency. With a frequency converter – a variable speed drive (VSD) – the motor will deliver even better value. A variable speed drive motor can be started softly with low starting current, and the speed can be controlled and adjusted to suit the application demand without steps over a wide range. Also the use of a frequency converter together with a squirrel cage motor usually leads to remarkable energy and environmental savings.

However, all motors are not suitable for variable speed drive. There are several points that have to be taken into account in the design and selection of the motor, if it is intended for variable speed operation.

Within the General purpose motor range ABB offers motors designed for both Direct On Line (DOL) and variable speed applications.

For more demanding applications the use of ABB Process performance motors is recommended.

The following points must be taken into account, when selecting a motor to a variable speed drive:

1. Dimensioning

The voltage (or current) fed by the frequency converter is not purely sinusoidal. This may increase the losses, vibration, and noise of the motor. Furthermore, a change in the distribution of the losses may affect to the temperature rise of the motor. In each case, the motor must be correctly sized according to the instructions supplied with the selected frequency converter.

When using ABB converters, please use ABB's DriveSize dimensioning programme or the loadability curves of the corresponding converter type for sizing the motors. The loadability curve for applicable General purpose motors used with ABB's ACS 600- and ACS 800- frequency converters can be found in figure 3.

2. Speed range

In a frequency converter drive, the actual operating speed of the motor may deviate considerably from its nominal speed (i.e. the speed stamped on the rating plate).

For higher speeds, ensure that the highest permissible rotational speed of the motor or the critical speed of the entire equipment is not exceeded. When high speed operation exceeds the nominal speed of the motor, the following points should be checked:

- Maximum torque of the motor
- Bearing construction
- Lubrication
- Balancing
- Critical speeds
- Shaft seals
- Ventilation
- Fan noise

Guideline values of maximum speeds for M3AA motors within the General purpose motor range are described in figure 1 below. Exact values are available on request.

Figure 1. Guideline values of maximum speeds for General purpose motor in aluminium frame:

Motor size	Speed r/min	
	2-pole	4-pole
M3AA 90-100	6000	6000
M3AA 112-200	4500	4500
M3AA 225-280	3600	3600

At low speed operation the motor's ventilation fan loses its cooling capacity, which causes a higher temperature rise in the motor and in the bearings. A separate constant speed fan can be used to increase cooling capacity and loadability at low speed. It is also important to check the performance of the grease at low speeds.

3. Lubrication

Variable speed operation affects on the bearing temperature, which must be taken into account when selecting the lubrication method and grease type. For example the life time of sealed bearings can be remarkably shorter than in direct on line operation. More information can be found from product specific sections of this catalogue and from ABB's Low Voltage Motors Manual.

4. Insulation protection

Frequency converter supply causes higher voltage stresses at the windings of the motor than the sinusoidal supply. Thus, the insulation system and possible filters must be selected according to the used voltage, cable length and converter type.

When using ABB's low voltage frequency converters, selection criterias mentioned in figure 2 must be followed.

5. Bearing currents

Bearing voltages and currents must be avoided in all motors. Assuming the use of ABB ACS 800 or ACS 550 drive, with uncontrolled DC-voltage, insulated bearings and/or properly dimensioned filters at the converter output must be used according to the instructions in figure 2. (For other alternatives and converter types, please contact ABB.) When ordering, clearly state which alternative will be used.

For more information about bearing currents and voltages, please contact ABB.

6. Cabling, grounding and EMC

The use of a frequency converter puts higher demands on the cabling and grounding of the drive system. The motor must be cabled by using shielded symmetrical cables and cable glands providing 360° bonding (also called EMC-glands). For motors up to 30 kW unsymmetrical cables can be used, but shielded cables are always recommended.

More information about grounding and cabling of a variable speed drive can be found from the manual

“Grounding and cabling of the drive system” (Code: 3AFY 61201998 R0125 REV A) and the ABB’s Low Voltage Motors Manual.

For fulfilling the EMC requirements, special EMC cable(s) must be used in addition to the correct cable gland mounting, with special, extra earthing pieces. Please refer to the manuals of the frequency converter.

Validity

Measures mentioned in Figure 2 apply to the applicable motors within the General motors range (not high-output versions) with ACS 800 and ACS 550 drives with uncontrolled DC-voltage. For other alternatives and converter types, please contact ABB.

Figure 2. Selection rules for insulation and filtering in variable speed drives

	Motor nominal power P_N or frame size		
	$P_N < 100 \text{ kW}$	$P_N \geq 100 \text{ kW}$ or $\geq \text{IEC 315}$	$P_N \geq 350 \text{ kW}$ $\geq \text{IEC 450}$
$U_N \leq 500 \text{ V}$	Standard motor	Standard motor + Insulated N-bearing	Standard motor + Insulated N-bearing + Common mode filter
$U_N \leq 600 \text{ V}$	Standard motor + dU/dt-filter OR Reinforced insulation	Standard motor + dU/dt-filter (reactor) + Insulated N-bearing OR Reinforced insulation + Insulated N-bearing	Standard motor + Insulated N-bearing + dU/dt-filter + Common mode filter OR Reinforced insulation + Insulated N-bearing + Common mode filter
$U_N \leq 690 \text{ V}$	Reinforced insulation + dU/dt-filter	Reinforced insulation + dU/dt-filter (reactor) + Insulated N-bearing	Reinforced insulation + Insulated N-bearing + dU/dt-filter + Common mode filter

dU/dt filter (reactor)

Series reactor. DU/dt -filter decreases the changing rate of the phase and main voltages and thus reduces voltage stresses in the windings. DU/dt -filters also decrease so-called common mode currents and the risk of bearing currents.

Common mode filters

Common mode filters reduce so-called common mode currents in VSD applications and thus decrease the risk of bearing currents. Common mode filters do not significantly affect the phase or main voltages on the motor terminals.

Insulated Bearings

Bearings with insulated inner or outer races are used as the standard solution. So-called hybrid bearings, i.e. bearings with non-conductive ceramic balls, can also be used in special applications. More information for spare part selection is available on request.

Figure 3. Motor loadability with ACS 600 and ACS 800, Field weakening point 50 Hz.

General Purpose Aluminum Motors

Totally enclosed squirrel cage three phase low voltage motors,

Mechanical design

Stator

Stator framework, bearing shields and feet are made of an extra corrosion resistant aluminum alloy with low copper content with the following exceptions:
M2AA 180-250 and M3AA 250 SMA-2 basic version, have cast iron feet.
M3AA 280 has feet and D-end shield of cast iron.

M3AA 250 SMB 2-pole, high output version, as well as M3AA 280 2-pole have cast iron feet and bearing shields.

The flange bearing shields of sizes 180 to 280 are made of cast iron.

Drain holes

Motors that will be operated in very humid or wet environments and especially under intermittent duty should be provided with drain holes. The appropriate IM designation, such as IM 3031, is specified on the basis of the method of mounting the motor.

Motors are provided with closable plastic plugs in the drain holes (see diagram below). The plugs will be open on delivery. When mounting the motors it should be ensured that the drain holes face downwards. In the case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments both

plugs should be hammered home.

Sizes 56 to 63 are supplied as standard with drain holes on D-end while sizes 71 to 280 are supplied with drain holes both on D-end and N-end.

When mounting arrangement differs from foot mounted IM B3, please mention variant code 066 when ordering.

See variant codes 065, 066 and 076 under the heading "Drain holes".

Terminal box

Sizes 56 to 180 and M2AA 200

The terminal box is made of aluminum alloy and is located on top of the stator. The lower part of the box is integrated with the stator. It is provided with 2 knockout openings on each side. Sizes 160-180 also have a third smaller opening. Cable glands are not included.

Sizes 200 to 280, except M2AA 200

The terminal box and cover are made of deep drawn steel and mounted on top of the stator. The box is bolted to the stator and is not rotatable. The size of the box is the same for all motors.

In the basic design the terminal box is provided with two FL 13 flange openings, one on each side. The opening on the right side, seen from the D-end, is supplied with a flange with two holes for M40 cable glands. On delivery the holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the

other side is provided with a cover flange.

The motors can also be provided with an extra large terminal box, standard for voltage code S and frame size 280. See variant code 019 under the heading "Terminal box". This will increase the dimension HD by 32 mm. The box is supplied with two FL 21 openings. The right opening is provided with a flange with two holes for M63 cable glands. The holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange. The box can also be provided with an FL 13 opening towards the N-end.

When new motors are manufactured the terminal box can be mounted on the left or the right side. See variant codes 021 and 180 under the heading "Terminal box".

Terminal box size 56-80.

Terminal box size 90-100.

Terminal box size 112-132.

Terminal box size 160-180 and M2AA 200.

Terminal box size 200-280, except M2AA 200.

Connections

The terminal block is provided with 6 terminals for connecting Cu-cable. The terminals are marked in accordance with IEC 60034-8.

Connection openings

Motor size	Opening	Metric cable entry	Method of connection	Terminal bolt size	Maximum connectable Cu-cable area, mm ²
56-63	Knock-out opening	1 x M16 x 1.5 1 x Pg 11	Screw terminal	M4	2.5
71-80	Knock-out opening	2 x M20 x 1.5 2 x Pg 16	Screw terminal	M4	4

²⁾ M2AA 200 excluded

Bearings

The motors are provided with bearings according to the tables below.

Greater axial forces can be tolerated if the motors are provided with angular contact ball bearings. Note that

in such cases the axial force must only operate in one direction.

Motor versions with roller bearings tolerate greater radial forces.

Transport locking

Motors provided with roller bearings or angular contact ball bearings are fitted with a transport lock to prevent damage to the bearings, due to vibration, during transport.

Axially-locked bearings

The table below shows which of the motor's bearings are axially locked in the bearing seat. In motor sizes 56 to 80 the locking is done by an inner bearing circlip, in motor sizes 90 to 280 by an inner bearing cover.

See also variant code 042 under the heading "Bearings and lubrication".

¹⁾ A spring-washer at the N-end presses the rotor toward the D-end.

Lubrication

The motors are delivered with bearing grease for use at normal temperatures in dry or humid environments. The motors are lubricated for ambient temperatures 40°C and in some cases even above 40°C, see table 1 next page.

Motor sizes 63-180 and M2AA 200 are provided with shielded bearings. On request, motor sizes 90 to 180 and M2AA 200 are provided with grease nipples for regreasing, see variant code 041 under the heading "Bearings and lubrications".

Motor sizes 200-280, except M2AA 200, are provided with grease nipples for re-greasing as standard.

The lubrication interval L_1 , suitable for relubricated bearings, is defined as the number of operating hours after which 99 per cent of the bearings are adequately lubricated.

Lubrication intervals and grease quantities are specified on a plate on the motor as well as in the manual supplied with the motor.

The grease lifetime L_{10} , suitable for permanent lubricated bearings, is defined as the number of operating hours after which 90 per cent of the bearings are adequately lubricated. 50 per cent of the bearings achieve two times this figure. Maximum lifetime, however, should be regarded as 40000 hours.

In case of high ambient temperatures the shaft loads must be reduced compared to permissible loadings in the table (see pages 18 to 21), please contact ABB.

Table 1: Grease lifetime L_{10} in deep groove ball bearings of type 2Z in horizontally mounted motors in continuous running duty.

In vertically mounted motors, the grease lifetime is half the figures above.
 For applications corresponding to the empty cells in the table, please contact ABB. These applications can imply reduced lifetime for bearings and winding.
 Motors with roller bearings (optional) have considerably shorter grease life. For continuous operation regreasing nipples should be considered.

Lubrication intervals

ABB follows the L1-principle in defining lubrication interval. That means that 99% of the motors are sure to make the interval time. The lubrication intervals can also be calculated according to the L10-principle, which are normally dou-

bled compared to L1-values. Values available from ABB at request.

The table below gives lubrication intervals according to the L1-principle for different speeds. The values are valid for horizontal mounted mo-

tors (B3), with about 80°C bearing temperature and using good quality grease with lithium complex soap and with mineral or PAO-oil.

For more information, see ABB's Low Voltage Motors Manual.

Permissible loading on shaft

Pulley diameter

When the desired bearing life has been determined the minimum permissible pulley diameter can be calculated with F_R , according to the formula:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Bearing life

The nominal life is defined as the number of hours that are attained or exceeded by 90% of identical bearings, in a large test series, under certain specified conditions. 50% of the bearings attain a life of as much as 5 times this figure.

The life of bearings is dependent on various factors such as bearing load, motor speed, operating temperature and the purity of the grease. The permissible radial and axial loading for different motor sizes is shown in the table on the following pages.

The table is valid for 50 Hz. For 60 Hz and/or some other bearing life than specified in the table the values are changed according to the table on the right.

Permissible radial forces

The table at right shows the permissible radial force in Newton assuming zero axial force.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to SKF's theory on bearing life $L_{10_{aah}}$, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table at right.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{max}})$$

E = length of shaft extension in basic version.

where:

- D = diameter of pulley, mm
- P = power requirement, kW
- n = motor speed, r/min.
- K = belt tension factor, dependent on belt type and type of duty. A common value for V-belts is $K = 2.5$
- F_R = permissible radial force according to the tables

The table values assume the occurrence of only radial or axial forces. In the case of simultaneous radial and axial forces information can be supplied on request. It is assumed that the radial force is applied at the end of the motor shaft.

Permissible force at changed bearing life or supply frequency

Bearing life in hours at		Permissible force, as percentage of value in tables
50 Hz	60 Hz	
25,000	21,000	100% of value for 25,000 hours
40,000	33,000	100% of value for 40,000 hours
63,000	52,000	86% of value for 40,000 hours
80,000	67,000	80% of value for 40,000 hours

Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing lives of 20,000 and 40,000 hours.

At 60 Hz the values are to be reduced by 10%.

For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces F_{AD} , assumes D-bearing locked by means of locking ring.

Rating plates

Single-speed motors of size 56 to 132 are stamped with 50 and 60 Hz at voltage code S and D. The current rating for each voltage range is specified on the rating plate. It represents the highest current that can exist within the voltage range at the rated output. The power factor and speed specified on the rating plate apply at 400 V 50 Hz and 460 V 60 Hz.

Single-speed motors of size 160 to 280 are stamped with 50 and 60 Hz at voltage code S and D. The rating plate is arranged in the form of a table with values for current, power factor and motor speed at six voltages.

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3AA 112 MB
Pole number	4
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	5.5 kW
Product code	3GAA 112002-ACD
Variant codes if needed	

Motor size

Explanation of the product code

Positions 1 to 4

3GAA/3GVA =

Totally enclosed motor with aluminum stator frame

Position 4

Type of rotor

A = Squirrel cage rotor

Positions 5 and 6

IEC size

05 = 56	13 = 132
06 = 63	16 = 160
07 = 71	18 = 180
08 = 80	20 = 200
09 = 90	22 = 225
10 = 100	25 = 250
11 = 112	28 = 280

Position 7

Pole pairs

1 = 2 poles
2 = 4 poles
3 = 6 poles
4 = 8 poles
5 = 10 poles
6 = 12 poles
7 = > 12 poles
8 = Two-speed motors
9 = Multi-speed motors

Positions 8 to 10

Running number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted motor
B = Flange-mounted motor. Large flange with clearance holes.
C = Flange-mounted motor. Small flange with tapped holes.
F = Foot- and flange-mounted motor. Special flange.
H = Foot- and flange-mounted motor. Large flange with clearance holes.
J = Foot- and flange-mounted motor. Small flange with tapped holes.
N = Flange-mounted (CI ring flange FF)
P = Foot- and flange-mounted motor (CI ring flange FF)
V = Flange-mounted motor. Special flange.

¹⁾ Temperature rise class F.

²⁾ Temperature rise class F for 380 V 50 Hz.

³⁾ Temperature rise class F for 415 V 50 Hz.

The bullets in the product code indicate choice of mounting arrangement, voltage and frequency, generation code (see ordering information page).

¹⁾ On request.

The bullets in the product code indicate choice of mounting arrangement, voltage and frequency, generation code (see ordering information page).

Data at voltage ranges

Rated data at voltage codes S and D

Single-speed motors of size 112 to 132 can be produced with voltage codes S and D, i.e., voltage range at both 50 and 60 Hz. The current rating for each voltage range is specified on the rating plate. It represents the highest current that can exist within the voltage

range at the rated output. The power factor and speed specified on the rating plate apply at the average voltage within the range.

Output in kW		Design ³⁾	Motor type	Product code 3GAA	Current in A ¹⁾ at		Speed in r/min		Power factor cos φ

²⁾ Recalculation factors

Multiple by 1.73 when recalculating:
 from 380-420 V to 220-240 V 50 Hz
 from 440-480 V to 250-280 V 50 Hz

³⁾ Class F temperature rise

⁴⁾ High-output design.

⁵⁾ Efficiency class eff2.

Data at voltage ranges

Rated data at voltage codes S and D

Single-speed motors of size 112 to 132 can be produced with voltage codes S and D, i.e., voltage range at both 50 and 60 Hz. The current rating for each voltage range is specified on the rating plate. It represents the highest current that can exist within the voltage range at

the rated output. The power factor and speed specified on the rating plate apply at the average voltage within the range.

Output in kW		Design ³⁾	Motor type	Product code 3GAA	Current in A ¹⁾ at		Speed in r/min		Power factor cos φ

Steel motors in brief.....	111

Mechanical design

Stator

The stator frame is made of profile-pressed sheet steel, giving the motor high mechanical strength, low weight and a good surface finish. The stator core is welded into the stator frame and contributes to its excellent mechanical properties.

Feet and lifting eyes are welded to the stator frame. The terminal box and end shields are of cast iron.

Drain holes

Motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes. The appropriate IM designation, such as IM V3 (IM 3031), is specified, on the basis of the method of motor mounting.

plugs are open on delivery. Check that the drain holes and grease outlet face downwards, when mounting designation differs from standard horizontal mounting.

In the case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments the drain hole plug should be knocked in.

3 M2CA motors are fitted with drain holes and plugs. The

Terminal box

Terminal boxes are mounted either on the top of the motor, or on either side of the motor, see ordering information.

In basic version the terminal box can be rotated $2 \times 180^\circ$ to allow cable entry from either side of the motor, as option the terminal box can be turned $4 \times 90^\circ$.

Degree of protection of standard terminal box is IP 55.

The terminal box is equipped with cable glands or cable boxes as standard, and terminations are suitable for Cu- and Al-cables. Cables are connected to the terminals by cable lugs which are not included with the motor.

To enable us to supply suitable terminations for the motor please state cable type, quantity and size when ordering. Non-standard design of terminal boxes; e.g. size, degree of protection, are available as options.

Please see variant codes for options and dimension drawings of terminal boxes.

Co-ordination of terminal boxes and cable entries

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated type and termination parts are supplied according to the table below and on next page.

Deviations from standard design according to the following tables are available on request.

Bearings

The motors are normally fitted with single-row deep groove ball bearings as listed in the table below. The complete ball bearing designation is stated on the rating plate.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

When there are high axial forces, angular contact ball bearings should be used. This option is available on request. When a motor with angular contact ball bearings is ordered, the method of mounting and direction and magnitude of the axial force must be specified. For special bearings, please see the variant codes.

Bearing types

1) On request

Axially-locked bearings

The outer bearing ring at the D-end is axially locked with an inner bearing cover. The inner ring is locked by tight tolerance to the shaft.

All motors are equipped as standard with an axially-locked bearing at the D-end.

Transport locking

Motors that have roller bearings or an angular contact ball bearing are fitted with a transport lock before despatch to prevent damage to the bearings during transport. In case of transport locked bearing, the motor is provided with a warning sign.

Locking may also be fitted in other cases where transport conditions are suspected of being potentially damaging.

Bearing seals

M2CA motors have, as standard, V-rings at both ends. The size and type of suitable seals are in accordance with the table below:

Motor size	Number of poles	d ₁	d ₂	B ₁	b	Standard design		Alternative design Radial seal (DIN 3760) Variant code 072

Bearing life

The nominal life L_{10} of a bearing is defined according to ISO as the number of operating hours achieved or exceeded by 90% of identical bearings in a large test series under certain specified conditions. 50% of the bearings achieve at least five times this figure.

The calculated bearing life L_{10} for power transmission by means of a coupling (horizontal machine):
 Motor sizes M2CA 280 to 400 \geq 200.000 hours.

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated using F_R , as follows:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

where:

- D = diameter of pulley, mm
- P = power requirement, kW
- n = motor speed, r/min
- K = belt tension factor, dependent on belt type and type of duty. A common value for V-belts is 2.5.
- F_R = permissible radial force

Permissible loading on shaft

The table below gives the permissible radial and axial forces in Newtons, assuming the occurrence of only radial or axial force. In case of simultaneous radial and axial forces, information can be supplied on request. The values are based on normal conditions at 50 Hz and calculated bearing lives of 40,000 h.

Motors are B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed. When there are high axial forces, angular contact ball bearings should be used.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

Permissible radial and axial force for a bearing life of 40,000 hours

Motor size	Number of poles	Length of shaft extension E (mm)	Permissible radial force:				Permissible axial force:

¹⁾ On request

If the radial force is applied between points X₀ and X_{max}, the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X0} - \frac{X}{E} (F_{X0} - F_{Xmax})$$

E = length of shaft extension in basic version

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M2CA 315SMA
Pole number	4
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	132 kW
Product code	3GCA312210-ADA
Variant codes if needed	

A	B	C	D,E,F, G	A Motor type
M2CA	315 SMA	3GCA 312 210 - ADA, 003 etc.		B Motor size
				C Product code

				E Voltage/frequency code
				F Generation code
				G Variant code

Explanation of the product code:

Positions 1 to 4

3GCA = Totally enclosed fan cooled squirrel cage motor with steel stator frame

Positions 5 and 6

IEC-size

28 = 280

35 = 355

31 = 315

40 = 400

Position 7

Speed (Pole pairs)

1 = 2 poles

6 = 12 poles

2 = 4 poles

7 = > 12 poles

3 = 6 poles

8 = Two-speed motors

4 = 8 poles

9 = Multi-speed motors

5 = 10 poles

Position 8 to 10

Serial number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted, top-mounted terminal box

R = Foot-mounted, terminal box RHS seen from D-end

L = Foot-mounted, terminal box LHS seen from D-end

B = Flange-mounted, large flange

H = Foot- and flange-mounted, top-mounted terminal box

S = Foot- and flange-mounted, terminal box RHS seen from D-end

T = Foot- and flange-mounted, terminal box LHS seen from D-end

Position 13

Voltage and frequency code

See table below

Position 14

Generation code = A

The product code must be, if needed, followed by variant codes.

Code letters for supplementing the product code for voltage and frequency:

A	B	D	E	F	H
380 VY 50 Hz	380 VΔ 50 Hz	380-420 VΔ 50 Hz 660-690 VY 50 Hz 440-480 VΔ 60 Hz	500 VΔ 50 Hz 575 VΔ 60 Hz	500 VY 50 Hz 575 VY 60 Hz	415 VΔ 50 Hz
S	T	U	X		
220-240 VΔ 50 Hz 380-420 VY 50 Hz 440-480 VY 60 Hz	660 VΔ 50 Hz	690 VΔ 50 Hz	Other rated voltage, connection or frequency, max. 690 V		

General purpose steel motors

Technical data for totally enclosed squirrel cage three phase motors

IP 55 – IC 411 – Insulation class F, temperature rise class B

General purpose steel motors - Variant codes

Code 1)	Variant	Motor size			
		280	315	355	400
Balancing					
052	Vibration acc. to Grade A (IEC 60034-14).	P	P	P	P
417	Vibration acc. to Grade B (IEC 60034-14).	P	P	P	P
423	Balanced without key.	R	R	R	R
424	Full key balancing.	P	P	P	P
Bearings and lubrication					
036	Transport lock for bearings.	M	M	M	M
037	Roller bearing at D-end.	M	M	M	R
039	Cold resistant grease. For bearing temperatures -55 - +100°C.	M	M	M	M
040	Heat resistant grease (-25°... +150°C).	M	M	M	M
043	SPM-nipples.	M	M	M	M
058	Angular contact bearing at D-end, shaft force away from bearing.	P	P	P	P
060	Angular contact bearing at D-end, shaft force towards bearing.	P	P	P	P
107	Bearing mounted PT100 resistance elements.	P	P	P	P
420	Bearing mounted PTC thermistors.	P	P	P	P
796	Grease nipples JIS B 1575 PT 1/8 Type A. Stainless steel.	M	M	M	M
Branch standard designs					
071	Cooling tower duty. Only motors with shaft extensions downwards.	R	R	R	R
142	"Manilla"-winding connection, (440 VD series, 220 VD parallel, 60 Hz).	P	P	P	P
178	Stainless steel/acid proof bolts.	P	P	P	P
209	Non-standard voltage or frequency (special winding).	P	P	P	P
425	Corrosion protected stator and rotor core.	P	P	P	P
Cooling system					
044	Unidirectional fan, clockwise seen from D-end.	P	P	P	P
045	Unidirectional fan, counter clockwise seen from D-end.	P	P	P	P
068	Metal fan.	M	M	M	M
075	Cooling method IC 418 (without fan).	P	P	P	P
Coupling					
035	Assembly of customer supplied coupling-half (finish bored and balanced).	M	M	M	M
Dimension drawing					
141	Binding dimension drawing.	M	M	M	M
Drain holes					
065	Plugged drain holes.	M	M	M	M
066	Modified drain hole position (for specified IM xxxx).	M	M	M	M
Earthing bolt					
067	External earthing bolt.	M	M	M	M

1) Certain variant codes cannot be used simultaneously.

S = Included as standard
M = On modification of a stocked motor,
or on new manufacture,
the number per order may be limited.

P = New manufacture only.
R = On request.
NA = Not applicable

Code 1)	Variant	Motor size			
		280	315	355	400
Heating elements					
	Motor size	Element capacity:			
	280	50 W			
	315	65 W			
	355-400	2 x 65 W			
450	Heating element, 100-120 V.	P	P	P	P
451	Heating element, 200-240 V.	M	M	M	M
Mounting arrangements					
009	IM 2001 foot/flange mounted, IEC flange, from IM 1001 (B35 from B3).	M	M	M	M
Painting					
114	Special paint colour, standard grade.	M	M	M	M
179	Special paint specification.	P	P	P	P
Protection					
005	Protective roof, vertical motor, shaft down.	M	M	M	M
072	Radial seal at D-end.	M	M	M	M
073	Sealed against oil at D-end.	P	P	P	P
158	Degree of protection IP 65. Dust proof version.	M	M	M	M
403	Degree of protection IP 56.	M	M	M	M
Rating & instruction plates					
002	Restamping voltage, frequency and output, continuous duty.	M	M	M	M
095	Restamping output (maintained voltage, frequency), intermittent duty.	M	M	M	M
135	Mounting of additional identification plate, stainless.	M	M	M	M
138	Mounting of additional identification plate, aluminum.	M	M	M	M
161	Additional rating plate delivered loose.	M	M	M	M
Shaft & rotor					
069	Two shaft extensions as per basic catalogue. Standard shaft material.	P	P	P	P
070	One or two special shaft extensions, standard shaft material.	P	P	P	P
410	Stainless/acid-proof steel shaft (standard or non-standard design). One or two extensions.				
Standards and regulations					
010	Fulfilling CSA requirements.	P	P	P	P
011	Fulfilling CSA Energy Efficiency Verification (010 included).	R	R	R	R
Stator winding temperature sensors					
121	Bimetal detectors, break type (NCC), (3 in series), 130°C, in stator winding.	M	M	M	M
122	Bimetal detectors, break type (NCC), (3 in series), 150°C, in stator winding.	M	M	M	M
123	Bimetal detectors, break type (NCC), (3 in series), 170°C, in stator winding.	M	M	M	M
125	Bimetal detectors, break type (NCC), (2x3 in series), 150°C, in stator winding.	M	M	M	M
127	Bimetal detectors, break type (NCC), (3 in series, 130°C & 3 in series, 150°C), in stator winding.				
435	PTC - thermistors (3 in series), 130°C, in stator winding.	M	M	M	M
436	PTC - thermistors (3 in series), 150°C, in stator winding.	S	S	S	S
437	PTC - thermistors (3 in series), 170°C, in stator winding.	M	M	M	M
439	PTC - thermistors (2x3 in series), 150°C, in stator winding.	M	M	M	M

1) Certain variant codes cannot be used simultaneously.

S = Included as standard
M = On modification of a stocked motor,
or on new manufacture,
the number per order may be limited.

P = New manufacture only.
R = On request.
NA = Not applicable

Code 1)	Variant	Motor size			
		280	315	355	400
440	PTC - thermistors (3 in series, 110°C & 3 in series, 130°C), in stator winding.	R	R	R	R
441	PTC - thermistors (3 in series 130°C & 3 in series 150°C), in stator winding.	M	M	M	M
442	PTC - thermistors (3 in series 150°C & 3 in series 170°C), in stator winding.	M	M	M	M
446	PT100 resistance elements (2 per phase) in stator winding.	M	M	M	M
446	PT100 resistance elements (2 per phase) in stator winding.	M	M	M	M
Terminal box					
015	Motor supplied in D-connection.	M	M	M	M
017	Motor supplied in Y-connection.	M	M	M	M
019	Larger than standard terminal box.	R	R	R	R
136	Extended cable connection, standard terminal box.	R	R	R	R
137	Extended cable connection, low terminal box.	P	P	R	R
157	Terminal box degree of protection IP 65.	M	M	M	M
187	Cable glands of non-standard design.	R	R	R	R
413	Extended cable connection, no terminal box.	P	P	P	R
414	Smaller than standard terminal box.	P	P	P	P
418	Separate terminal box for temperature detectors.	P	P	P	P
468	Non-standard cable entry direction (please state direction).	M	M	M	M
469	Axial cable entry direction, terminal box 4x90° turnable.	P	P	P	P
Testing					
145	Type test report from catalogue motor, 400 V 50 Hz.	M	M	M	M
146	Type test with report for motor from specific delivery batch.	P	P	P	P
147	Type test with report for motor from specific delivery batch, customer witnessed.	P	P	P	P
148	Routine test report.	M	M	M	M
149	Testing according to separate test specification.	R	R	R	R
221	Type test and multi-point load test with report for motor from specific delivery batch.	R	R	R	R
222	Torque/speed curve, type test and multi-point load test with report for motor from specific delivery batch.	P	P	P	P
760	Vibration level test.	P	P	P	P
761	Vibration spectrum test.	P	P	P	P
762	Noise level test.	P	P	P	P
763	Noise spectrum test.	P	P	P	P
Y/D-starting					
117	Terminals for Y/D start at both speeds (two speed windings).	P	P	P	P
118	Terminals for Y/D start at high speed (two speed windings).	P	P	P	P
119	Terminals for Y/D start at low speed (two speed windings).	P	P	P	P

Silencer for motor sizes 280-400

Both foot-mounted and flange-mounted motors can be fitted with a silencer to reduce the noise level by about 10 dB(A). The silencer is painted blue and is made of 2 mm steel sheet. The sound absorbing material is 40 mm thick polyurethane foam. On the underside there is a rubber strip to seal against the floor. The silencer fits loosely over the motor.

Dimensions of silencers on request.

¹⁾ If connections to the motor or control gear require it, an opening can be made in the extension of the silencer or it can be removed.

Cast iron motors in brief.....	144

Mechanical design

Stator

The motor frame including feet, bearing housing and terminal box is made of cast iron. Integrally cast feet allow a very rigid mounting and minimal vibration.

Motors can be supplied for foot mounting, flange mounting and combinations of these.

Drain holes

Motors, frame sizes 280 to 355, are fitted with drain holes and closable plugs. The plugs are open on delivery. When mounting the motors, ensure that the drain holes face downwards.

In the case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments, both plugs should be hammered home.

Drain holes for motors IEC frame sizes 71 to 250 are available as modification.

Terminal boxes

Terminal boxes are mounted on top of the motor as standard. The terminal box can also be mounted on the left or right side, see ordering information.

Terminations are suitable for Cu- and Al-cables. Cables are connected to the terminals by cable lugs which are not included with the motor.

The terminal box of motor sizes 71 to 250 can be turned 4x90° and in motors sizes 280 to 355 rotated 2x180° to allow cable entry from either side of the motor. Degree of protection of standard terminal box is IP 55.

To enable the supply of suitable terminations for the motor, please state cable type, quantity and size when ordering. Non-standard design of terminal boxes; e.g. size, degree of protection, are available as options.

The terminal boxes in sizes 280 to 355 are equipped with cable glands or cable boxes as standard.

Please see variant codes for options.

Terminal box examples

Motor sizes 71 to 132

Motor sizes 160 to 250

Motor sizes 280 to 355, provided either with a cable gland or a cable box.

Terminal boxes and cable entries

If no ordering information of the cable is given, it is assumed to be p.v.c.-insulated and termination parts are supplied according to the table below.

In motor sizes 280 to 355 the terminal box is equipped with cable glands or cable boxes as standard.

To enable the supply of suitable terminations for the motor, please state cable type, quantity and size when ordering.

The table below shows the different alternatives available for cable boxes and cable entries. Other types on request.

Cast iron motor sizes 71 to 250 with top-mounted terminal box

Bearings

The motors are normally fitted with single-row deep groove ball bearings as listed in the table below.

When there are high axial forces, angular-contact ball bearings should be used. This option is available on request.

When a motor with angular-contact ball bearings is ordered, the method of mounting and direction and magnitude of the axial force must be specified. For special bearings, please see the variant codes.

Basic version with deep groove ball bearings

Axially-locked bearings

The D-end bearing is locked, in sizes 71 to 180 with the spring ring and in sizes 200 to 355 with the inner bearing cover. The inner ring is locked by tight tolerance to the shaft.

Transport locking

Motors that have roller bearings or an angular contact ball bearing are fitted with a transport lock before despatch to prevent damage to the bearings during transport. In case of transport locked bearing, motor sizes 280 to 355 are provided with a warning sign.

Locking may also be fitted in other cases where transport conditions are suspected of being potentially damaging.

Bearing seals

The motors are as standard provided with seals according to table below.

Motor size	Description D-end	Standard design		Alternative design Radial seal (DIN 3760) Variant code 072	Number of poles	d ₁	d ₂	B ₁	b

Motor sizes 71-132

Motor sizes 160-225

Motor size 250

Motor sizes 280-355

Bearing life

The nominal life L_{10} of a bearing is defined according to ISO as the number of operating hours achieved or exceeded by 90% of identical bearings in a large test series under certain specified conditions. 50% of the bearings achieve at least five times this figure.

The calculated bearing life L_{10} for power transmission by means of a coupling (horizontal machine):

Motor sizes 280 to 355 200,000 hours.

Lubrication

On delivery, the motors are lubricated with a type of grease intended for use in dry or humid environments, at normal ambient temperature.

Standard versions of motors 71 to 225 are lubricated for life, with lithium based grease.

Motors 160 to 225 are available with either permanent greased or, as against variant codes, with regreasable bearings.

Motors 250 to 355 have grease value lubrication for lubrication in service. The lubrication intervals and quantity are stated in the maintenance manual which comes with the motor.

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR (or FRX), according to the formula:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{N \cdot F_R}$$

Where:

D = diameter of pulley, mm

P = power requirement, kW

N = motor speed, r /min

K = belt tension factor, dependent on belt type and type of duty. A common value for V belts is K= 2.5

F_R = permissible radial force

Permissible loadings on shaft

4 The tables below give the permissible radial force in Newtons, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives of 20,000 and 40,000 hours.

Motors are foot-mounted IM B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

At 60 Hz the values must be reduced by 10 %.

If the radial force is applied between points X₀ and X_{max}, the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{max}})$$

E = length of shaft extension in basic version

Permissible radial forces

Motor size	Poles	Length of shaft extension E (mm)	Radial forces Ball bearings 20,000 hours		40,000

Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard

bearings and calculated bearing lives of 20,000 and 40,000 hours.

Motors are foot-mounted IM B3 version.

At 60 Hz the values are to be reduced by 10%.

Mounting arrangement IM B3

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M2QA 90S4A
Pole number	4
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	1.1 kW
Product code	3GQA092101-ADA
Variant codes if needed	

A	B	C	D, E, F	G	A Motor type
M2QA	90S4A	3GQA	092	101 - AD A	B Motor size
				003 etc.	C Product code
					D Mounting arrangement code
					E Voltage and frequency code
					F Generation code
					G Variant codes

Explanation of the product code (C, D, E, F):

Positions 1 to 4

3GQA = Totally enclosed fan cooled squirrel cage motor with cast iron frame

Positions 5 and 6

IEC frame

07 = 71	11 = 112	20 = 200	31 = 315
08 = 80	13 = 132	22 = 225	35 = 355
09 = 90	16 = 160	25 = 250	
10 = 100	18 = 180	28 = 280	

Position 7

Speed (Pole pairs)

1 = 2 poles	6 = 12 poles
2 = 4 poles	7 = >12 poles
3 = 6 poles	8 = Two-speed motors
4 = 8 poles	9 = Multi-speed motors
5 = 10 poles	

Positions 8 to 10

Serial number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted, top-mounted terminal box
R = Foot-mounted, terminal box on RHS, seen from D-end
L = Foot-mounted, terminal box on LHS, seen from D-end
B = Flange-mounted, large flange
C = Flange-mounted, small flange sizes (71-112)
H = Foot- and flange-mounted

Position 13

Voltage and frequency code

See tables on appropriate page

Position 14

Generation code

A, B, C...

The product code must be, if needed, followed by variant codes.

Code letters for supplementing the product code for voltage and frequency:

A	B	D	E	F	H
380 VY 50 Hz	380 V 50 Hz	380-420 V 50 Hz 660-690 VY 50 Hz 440-480 ¹⁾ V 60 Hz	500 V 50 Hz 575 V 60 Hz	500 VY 50 Hz 575 VY 60 Hz	415 V 50 Hz
S	T	U	X		
220-240 V 50 Hz 380-420 VY 50 Hz 440-480 VY 60 Hz	660 V 50 Hz	690 V 50 Hz	Other rated voltage, connection or frequency, max. 690 V		¹⁾ 480 V not stamped on sizes 160 to 250

General purpose cast iron motors

General purpose cast iron motors - Variant codes

Code	Variant	Motor size					
		71-80	90-100	112-132	160-180	200-250	280-355
1)							
Balancing							
052	Vibration acc. to Grade A (IEC 60034-14).	M	M	M	NA	NA	NA
424	Vibration acc. to Grade B (IEC 60034-14).	M	M	M	R	R	NA
417	Full key balancing.	M	M	M	R	R	NA
Bearings and lubrication							
036	Transport lock for bearings.	NA	NA	NA	M	M	M
037	Roller bearing at D-end.	NA	NA	NA	M	M	M
039	Cold resistant grease.	M	M	M	M	M	M
040	Heat resistant grease.	M	M	M	M	M	M
041	Bearings regreasable via grease nipples. Frame size 250 as standard.	NA	NA	NA	M	M	S
043	SPM-nipples. Frame size 355 as standard.	NA	NA	M	NA	NA	M
Branch standard designs							
178	Stainless steel/acid proof bolts.	M	M	M	M	M	M
209	Non-standard voltage or frequency, (special winding).	M	M	M	M	M	NA
425	Corrosion protected stator and rotor core.	M	M	M	M	M	S
785	Reinforced tropicalisation.	S	S	S	S	S	S
Cooling system							
068	Metal fan.	M	M	M	M	M	M
183	Separate motor cooling fan (fan axial, N-end).	P	M	M	P	P	NA
Dimension drawing							
141	Binding dimension drawing.	M	M	M	M	M	M
Drain holes							
065	Plugged existing drain holes.	NA	NA	NA	NA	NA	M
066	Modified drain hole position (for specified IM xxxx).	NA	NA	NA	NA	NA	M
076	Draining holes with plugs.	M	M	M	M	M	S
Earthing bolt							
067	External earthing bolt.	M	M	M	M	M	M
Heating elements							
	Motor size	Element capacity					
	71-160	25 W					
	180-280	50 W					
	315	1 x 65 W					
	355	2 x 65 W					
450	Heating element, 100-120 V.	M	M	M	M	M	M
451	Heating element, 200-240 V.	M	M	M	M	M	M
Insulation system							
014	Winding insulation class H.	P	P	P	P	P	NA
405	Special winding insulation for frequency converter supply.	P	P	P	P	P	NA

*) Certain variant codes cannot be used simultaneously.

S = Included as standard
M = On modification of a stocked motor, or on new manufacture, the number per order may be limited.

P = New manufacture only.
R = On request.
NA = Not applicable

Code	Variant	Motor size					
		71-80	90-100	112-132	160-180	200-250	280-355
1)							
Mounting arrangements							
008	IM2101 foot/flange mounted, IEC flange, from IM1001(B34 from B3). Not possible for frame size 132.	M	M	M	NA	NA	NA
009	IM2001 foot/flange mounted, IEC flange, from IM1001(B35 from B3).	M	M	M	M	M	M
047	IM 3601 flange mounted, IEC flange, from IM3001 (B14 from B5). Not possible for frame size 132.	M	M	M	NA	NA	NA
078	(IM 3601) flange mounted, DIN C-flange. Larger flange than standard version. Not possible for frame size 132.	M	M	M	NA	NA	NA
090	(IM 2101) foot/flange mounted, DIN C-flange, from IM 1001 (B34 from B3). Not possible for frame size 132.	M	M	M	NA	NA	NA
Painting							
114	Special paint colour, standard grade.	M	M	M	M	M	M
Protection							
005	Protective roof, vertical motor, shaft down.	M	M	M	M	M	M
072	Radial seal at D-end.	M	M	M	M	M	M
073	Sealed against oil at D-end.	P	P	P	P	P	M
158	Degree of protection IP65.	M	M	M	M	M	NA
211	Weather protected, IP xx W.	M	M	M	M	M	NA
401	Protective roof, horizontal motor.	M	M	M	M	M	M
403	Degree of protection IP56.	M	M	M	M	M	NA
Rating & instruction plates							
002	Restamping voltage, frequency and output, continuous duty.	M	M	M	M	M	M
095	Restamping output (maintained voltage, frequency) intermittent duty.	M	M	M	M	M	M
135	Mounting of additional identification plate, stainless.	M	M	M	M	M	M
138	Mounting of additional identification plate, aluminum.	M	M	M	M	M	M
139	Additional identification plate delivered loose.	M	M	M	M	M	M
161	Additional rating plate delivered loose.	M	M	M	M	M	M
Stator winding temperature sensors							
121	Bimetal detectors, break type (NCC), (3 in series), 130°C, in stator winding.	M	M	M	M	M	M
122	Bimetal detectors, break type (NCC), (3 in series), 150°C, in stator winding.	M	M	M	M	M	M
123	Bimetal detectors, break type (NCC), (3 in series), 170°C, in stator winding.	M	M	M	M	M	M
125	Bimetal detectors, break type (NCC), (2x3 in series), 150°C, in stator winding.	M	M	M	M	M	M
127	Bimetal detectors, break type (NCC), (3 in series, 130°C, & 3 in series, 150°C), in stator winding.	M	M	M	M	M	M
321	Bimetal detectors, closing type (NO), (3 in parallel), 130°C, in stator winding.	M	M	M	M	M	M
322	Bimetal detectors, closing type (NO), (3 in parallel), 150°C, in stator winding.	M	M	M	M	M	M
323	Bimetal detectors, closing type (NO), (3 in parallel), 170°C, in stator winding.	M	M	M	M	M	M
325	Bimetal detectors, closing type (NO), (2x3 in parallel), 150°C, in stator winding.	M	M	M	M	M	M
327	Bimetal detectors, closing type (NO), (3 in parallel, 130°C, & 3 in parallel 150°C), in stator winding.	M	M	M	M	M	M

442	PTC-thermistors (3 in series 150°C & 3 in series 150°C, in stator winding.	M	M	M	M	M	M
445	Pt100 (1per phase) in stator winding. Not available for frame size 71.	M	M	M	M	M	M

Terminal box

015	Motor supplied in D-connection.	M	M	M	M	M	M
017	Motor supplied in Y-connection.	M	M	M	M	M	M
021	Terminal box LHS, seen from D-end (= L in product code).	P	P	P	P	P	NA
137	Extended cable connection, low terminal box.	P	P	P	P	P	NA
157	Terminal box degree of protection IP 65.	M	M	M	M	M	M
180	Terminal box RHS, seen from D-end (= R in product code).	M	M	M	M	M	NA
230	One standard cable gland or cable box.	M	M	M	M	M	S
231	Standard cable glands with clamping device.	S	S	S	M	M	NA
400	4x90 degrees turnable terminal box.	P	P	P	P	P	NA
418	Separate terminal box for temperature detectors.	M	M	M	P	P	M
467	Lower than standard terminal box and rubber extended cable, length 2 m included.	M	M	M	M	M	M
468	Cable entry from D-end.	M	M	M	M	M	M
469	Cable entry from N-end.	M	M	M	NA	NA	NA
731	Two standard cable glands.	NA	NA	NA	NA	NA	M

Testing

145	Type test report from catalogue motor, 400 V 50 Hz.	M	M	M	M	M	M
146	Type test with report for motor from specific delivery batch.	R	R	R	R	R	M
148	Routine test report.	M	M	M	M	M	M
760	Vibration level test.	M	M	M	M	M	M
762	Noise level test.	NA	NA	NA	NA	NA	M

Variable speed drives

701	Insulated bearing at N-end.	NA	NA	NA	NA	NA	M
704	EMC cable gland.	NA	NA	NA	NA	NA	M

Rating plates

For motor sizes 71 to 132 the rating plate gives one current value for the voltage area. That is the highest current that can occur within the voltage area with the given output.

For motor sizes 160 to 355 the rating plate is in table form giving values for speed, current and power factor for six voltages.

Motor sizes 71 to 132

Mechanical design

Stator

The stator frame is made of profile-pressed sheet steel, giving the motor high mechanical strength, low weight and a good surface finish. The stator core is welded into the stator frame and contributes to its excellent mechanical properties.

Feet and lifting eyes are welded to the stator frame. The

terminal box and end shields are of cast iron.

Drain holes

Motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes. The appropriate IM designation, such as IM V3 (IM 3031), is specified, on the basis of the method of motor mounting.

M2FA motors are fitted with drain holes and plugs. The

plugs are open on delivery. Check that the drain holes and grease outlet face downwards, when mounting designation differs from standard horizontal mounting.

In the case of vertical mounting, the upper plug must be hammered home completely. In very dusty environments the drain hole plug should be knocked in.

Terminal box

Terminal boxes are mounted either on the top of the motor, or on either side of the motor, see ordering information page .

In basic version the terminal box can be rotated 2x180° to allow cable entry from either side of the motor.

The terminal box is equipped with cable glands or cable boxes as standard, and terminations are suitable for Cu- and Al-cables. Cables are connected to the terminals by cable lugs which are not included with the motor.

To enable us to supply suitable terminations for the motor please state cable type, quantity and size when ordering.

For dimension drawings of terminal boxes, see drawings.

Co-ordination of terminal boxes and cable entries

If no ordering information on the cable is given, it is assumed to be p.v.c. -insulated type and termination parts are supplied according to the table below and on next page.

Deviations from standard design according to the following tables are available on request.

M2FA 280 to 400 motors with top-mounted terminal box

¹⁾ Terminal box type 162/4 is used with a combination of one E-opening and one or two D-openings, as described below:

Terminal box 162 with adapting flange 3GZF 294730-501 (E-D) or optional 3GZF 294730-301 (E-2D) :

Terminal box 162 with adapting flange:

Opening	c	e	f	g	d
C (FL 21)	62	193	62	193	M8
D (FL 33)	100	300	80	292	M10
E (FL 40)	115	370	100	360	M12

Bearings

The motors are normally fitted with single-row deep groove ball bearings as listed in the table on the right. The complete ball bearing designation is stated on the rating plate.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt drive applications.

When there are high axial forces, angular-contact ball bearings should be used. This option is available on request. When a motor with angular-contact ball bearings is ordered, the method of mounting and direction and magnitude of the axial force must be specified. For special bearings, please see variant codes.

Standard bearing types

Motor size	Number of poles	Basic version with deep groove ball bearings		Version with roller bearings, variant code 037
		D-end	N-end	D-end

¹⁾ Viton-seal

Permissible radial forces

The table below gives the permissible radial force in Newtons, assuming zero axial force. The values are based on normal conditions at 50 Hz and calculated bearing lives of 40,000 h.

At 60 Hz the values must be reduced by 10 %. For two-speed motors, the values must be based on the higher speed. Permissible loads of simultaneous radial and axial forces will be supplied on request.

Motors are B3 version with force directed sideways. In some cases the strength of the shaft affects the permissible forces.

Permissible radial and axial force for a bearing life of 40,000 hours

Motor size	Number of poles	Length of shaft extension E (mm)	Permissible radial force for:				Permissible axial force for ¹⁾ :

	8	210	²⁾	²⁾	²⁾	²⁾	²⁾	²⁾	²⁾		

¹⁾ Flange-mounted motors with deep groove ball bearings at D-end. Other designs on request. No simultaneous radial forces allowed.

²⁾ On request.

If the radial force is applied between points X₀ and X_{max}, the permissible force F_R can be calculated from the following formula:

$$F_R = F_{x_0} - \frac{X}{E} (F_{x_0} - F_{x_{max}})$$

E = length of shaft extension in basic version

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M2FA 315SMA
Pole number	2
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	200 kW
Product code	3GFA312210-ASB
Variant codes if needed

B = Flange-mounted

L = Foot-mounted, terminal box LHS, seen from D-end

R = Foot-mounted, terminal box RHS, seen from D-end

H = Foot- and flange-mounted, top-mounted terminal box

S = Foot- and flange-mounted, terminal box LHS seen from D-end

T = Foot- and flange-mounted, terminal box RHS seen from D-end

Position 13

Voltage/frequency code

See tables below

Position 14

Generation code

A, B, C...

The product code must, if needed, followed by variant codes.

Code letters for supplementing the product code for voltage and frequency – single speed motors:

A	B	D	E	F	H
380 VY 50 Hz	380 VΔ 50 Hz	380-420 VΔ 50 Hz 660-690 VY 50 Hz 440-480 VΔ 60 Hz	500 VΔ 50 Hz 575 VΔ 60 Hz	500 VY 50 Hz 575 VY 60 Hz	415 VΔ 50 Hz
S	T	U	X		
220-240 VΔ 50 Hz 380-420 VY 50 Hz 440-480 VY 60 Hz	660 VΔ 50 Hz	690 VΔ 50 Hz	Other rated voltage, connection or frequency, max. 690 V		

Code letters for supplementing the product code for voltage and frequency – two-speed motors:

A	B	D	E	H	S
220 V 50 Hz	380 V 50 Hz	380-400 V 50 Hz 440-480 V 60 Hz	500 V 50 Hz 575 V 60 Hz	400-415 V 50 Hz 460-480 V 60 Hz	220-230 V 50 Hz

General purpose open drip proof motors

Technical data for squirrel cage

three phase motors, steel frame

IP 23 S – IC 01 – Insulation class F, temperature rise class B

The two bullets in the product code indicate choice of mounting arrangement, voltage and frequency (see ordering information page).

Data for other number of poles and bigger frame sizes on request.

General purpose open drip proof motors - Variant codes

Code ¹⁾	Variant	Motor size				
		250	280	315	355	400
Balancing						
052	Vibration acc. to grade A (IEC 60034-14).	P	P	P	P	P
417	Vibration acc. to grade B (IEC 60034-14).	P	P	P	P	P
Bearings and lubrication						
036	Transport lock for bearings.	M	M	M	M	M
037	Roller bearing at D-end.	M	M	M	M	R
043	SPM nipples.	M	M	M	M	M
058	Angular contact bearing at D-end, shaft force away from bearing.	P	P	P	P	P
107	Bearing mounted PT100 resistance elements.	P	P	P	P	P
420	Bearing mounted PTC thermistors.	P	P	P	P	P
Branch standard designs						
209	Non-standard voltage or frequency (special winding).	P	P	P	P	P
Coupling						
035	Assembly of customer supplied coupling-half (finish bored and balanced).	M	M	M	M	M
Drain holes						
066	Modified drain hole position (for specified IM xxxx).	M	M	M	M	M
Heating elements						
	<u>Motor size:</u>	<u>Element capacity:</u>				
	250-280	50 W				
	315	2 x 50 W				
	355-400	2 x 65 W				
450	Heating element, 100-120 V.	P	P	P	P	P
451	Heating element, 200-240 V.	M	M	M	M	M
Insulation system						
014	Winding insulation class H.	P	P	P	P	P
Mounting arrangements						
009	IM 2001 foot/flange mounted, IEC flange, from IM 1001 (B35 from B3).	P	P	P	P	R
Painting						
114	Special paint colour, standard grade.	M	M	M	M	M
Protection						
005	Protective roof, vertical motor, shaft down.	M	M	M	M	M
072	Radial seal at D-end.	M	M	M	M	M
Rating & instruction plates						
002	Restamping voltage, frequency and output, continuous duty.	M	M	M	M	M
095	Restamping output (maintained voltage, frequency), intermittent duty.	M	M	M	M	M
135	Mounting of additional identification plate, stainless.	M	M	M	M	M
161	Additional rating plate delivered loose.	M	M	M	M	M

¹⁾ Certain variant codes cannot be used together.

M = On modification of a stocked motor, or on new manufacture, the number per order may be limited.

R = On request

S = Included as standard

P = New manufacture only

Code ¹⁾	Variant	M2FA, motor size				
		250	280	315	355	400
Shaft & rotor						
069	Two shaft extensions as per basic catalogue. Standard shaft material.	P	P	P	P	P
070	One or two special shaft extensions, standard shaft material.	P	P	P	P	P
Stator winding temperature sensors						
121	Bimetal detectors, break type (NCC), (3 in series), 130°C, in stator winding.	M	M	M	M	M
122	Bimetal detectors, break type (NCC), (3 in series), 150°C, in stator winding.	M	M	M	M	M
123	Bimetal detectors, break type (NCC), (3 in series), 170°C, in stator winding.	M	M	M	M	M
125	Bimetal detectors, break type (NCC), (2x3 in series), 150°C, in stator winding.	M	M	M	M	M
127	Bimetal detectors, break type (NCC), (3 in series, 130°C & 3 in series, 150°C), in stator winding.	M	M	M	M	M
435	PTC - thermistors (3 in series), 130°C, in stator winding.	M	M	M	M	M
436	PTC - thermistors (3 in series), 150°C, in stator winding.	S	S	S	S	S
437	PTC - thermistors (3 in series), 170°C, in stator winding.	M	M	M	M	M
439	PTC - thermistors (2x3 in series), 150°C, in stator winding.	M	M	M	M	M
441	PTC - thermistors (3 in series 130°C & 3 in series 150°C), in stator winding.	M	M	M	M	M
442	PTC - thermistors (3 in series 150°C & 3 in series 170°C), in stator winding.	M	M	M	M	M
445	PT100 resistance element (1 per phase) in stator winding.	P	P	P	P	P
446	PT100 resistance elements (2 per phase) in stator winding.	P	P	P	P	P
Terminal box						
015	Motor supplied in D connection.	P	P	P	P	P
017	Motor supplied in Y connection.	M	M	M	M	M
022	Cable entry LHS (seen from D-end).	P	P	P	P	P
Testing						
145	Type test report from test of identical motor.	M	M	M	M	M
146	Type test with report for motor from specific delivery batch.	P	P	P	P	P
147	Type test with report for motor from specific delivery batch, customer witnessed.	P	P	P	P	P
148	Routine test report.	M	M	M	M	M
149	Testing according to separate test specification.	R	R	R	R	R
153	Reduced test for classification society.	P	P	P	P	P
760	Vibration level test.	P	P	P	P	P
761	Vibration spectrum test.	P	P	P	P	P
762	Noise level test.	P	P	P	P	P
763	Noise spectrum test.	P	P	P	P	P

General purpose open drip proof motors in brief, basic design

Motor frame size		250	280	315	355	400	
Stator	Material	Profile-pressed sheet steel					
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822-B05G / RAL 5014					
	Paint thickness	Two-pack epoxy paint, thickness $\geq 70 \mu\text{m}$					
Bearing end shields	Material	Cast iron GG 20/GRS 200					
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822-B05G / RAL 5014					
	Paint thickness	Two-pack epoxy paint, thickness $\geq 70 \mu\text{m}$					
Bearings	D-end	2-pole	6316/C4	6316/C4	6316/C4	on request	on request
		4-12 poles	6316/C3	6319/C3	6319/C4	6322/C3	6322/C3
	N-end	2-pole	6316/C4	6316/C4	6316/C4	on request	on request
		4-12 poles	6316/C3	6316/C3	6316/C3	6319/C3	6319/C3
Axially-locked bearings	Inner bearing cover	As standard, locked at D-end					
Bearing seal		V-ring as standard, radial seal on request					
Lubrication		Regreasing nipples, M10x1 Grease for bearing temperatures -30°C to $+120^{\circ}\text{C}$					
Rating plate		Stainless steel, with individual serial number					
SPM-nipples		On request					
Terminal box	Frame material	Cast iron GG 15 / GRS 150					
	Cover material	Cast iron GG 15 / GRS 150					
	Cover screw material	Steel 5G, coated with zinc and yellow chromated					
Connections	Cable	2 - 4 pole	2 x M63	2 x Ø50/80	2 x Ø80		
		6 pole	2 x M63	2 x Ø60	2 x Ø60/80		
	Terminals	6 terminals for connection with cable lugs (not included)					
Fan	Material	Siluminium					
Fan cover	Material	Sheet steel					
	Paint colour shade	Blue, Munsell 8B 4.5/3.25 / NCS 4822-B05G / RAL 5014					
	Paint thickness	Two-pack epoxy polyester paint, thickness $\geq 80 \mu\text{m}$					
Stator winding	Material	Copper					
	Insulation	Insulation class F; temperature rise class B unless otherwise stated.					
	Winding protection	PTC-thermistors 150°C , 3 in series, as standard					
Rotor winding	Material	Pressure die-cast aluminium

Global motors in brief	200

Global motors

Features

The global economy connects multinational companies with engineering and production in many countries around the world.

Once a motor is specified and put into use, production equipment, including the motors, may need to move from one country to another. Very often the new country will have different voltage, efficiency and safety label requirements.

The new Global motor from ABB puts an end to the confusion and waste. ABB has designed a motor that is multi-labeled and certified for use virtually anywhere. The motors are harmonized to IEC - CENELEC power and frame size standards and are readily available from any of the ABB central stock locations in Europe, Asia and/or America.

Certified for global use

Global motors are certified, labeled and will fulfill requirements for global use:

CE	European safety certified
EFF1	European Community efficiency classification, highest class EFF1
CSA	Canadian safety certified
EEV	Canadian Energy Efficient certified
UR	US safety certified
EPAct	US Energy Efficiency certified

Note: A product that bears the UR logo is approved by Underwriter's Laboratories. This ensures that the product can be used in any machine or application that will be subject to UL certification – without additional testing.

Certificates for ABB Global motors can be found on www.ul.com pages.

6 EPAct requirements for importing products for the U.S.

Motors, rated from 1 to 200 horsepower (0.7 kW to 150 kW), for use within the United States are subject to EPAct legislation. Requirements defined by EPAct include:

- Foot mounted and foot-flange mounted
- 2, 4 and 6 pole motors
- 230 and 460 V \pm 10% 60 Hz
- Outputs defined, no derating allowed
- Efficiency must meet NEMA minimum efficiency requirements
- Ambient temperature 40°C

Flange mounted motors will be delivered as global motors however the CC number cannot be printed on the rating plate.

Motors with voltage rating outside 230 and 460 V \pm 10% 60 Hz will be delivered as global motors however the CC number cannot be printed on the rating plate.

CC number

Motors covered by EPAct must have the EPAct compliance number stamped on the rating plate. The number for all ABB low voltage motors is CC031A.

The number is mandatory for all motors included in the EPAct scope and will be checked by US Customs inspectors before clearance into the United States.

Voltage

The Global motors can be delivered for all voltages in the range from 200 up to 600 V 60 Hz. The most common voltage in the U.S. is 460 V 60 Hz, however 480 volt systems are frequently specified. In the case of a 480 volt system with a variable frequency drive, the output of the drive to the motor will be 460 volts, therefore allowing a standard motor to be used.

Mechanical design

Stator

Stator framework, bearing shields and feet are made of an extra corrosion resistant aluminum alloy with low copper content with the following exceptions:

M3AA 250-280 has feet and D-end shield of cast iron. M3AA 250-280 2-pole, have also N-end shield of cast iron.

The flange bearing shields of sizes 180 to 280 are made of cast iron.

Drain holes

Motors that will be operated in very humid or wet environments and especially under intermittent duty should be provided with drain holes. The appropriate IM designation, such as IM 3031, is specified on the basis of the method of mounting the motor.

Motors are provided with closable plastic plugs in the drain holes (see diagram below). The plugs will be open on delivery. When mounting the motors it should be ensured that the drain holes face downwards. In the case of vertical mounting, the upper plug must be

hammered home completely. In very dusty environments both plugs should be hammered home.

Size 63 is supplied as standard with drain holes on D-end while sizes 71 to 280 are supplied with drain holes both on D-end and N-end.

When mounting arrangement differs from foot mounted IM B3, please mention variant code 066 when ordering. See variant codes 065, 066 and 076 under the heading "Drain holes".

Terminal box

Sizes 63 to 180

The terminal box is made of aluminum alloy and is located on top of the stator. The lower part of the box is integrated with the stator. It is provided with 2 knockout openings on each side. Sizes 160-180 also have a third smaller opening. Cable glands are not included.

Sizes 200 to 280

The terminal box and cover are made of deep drawn steel and mounted on top of the stator. The box is bolted to the stator and is not rotatable. The size of the box is the same for all motors.

In the basic design the terminal box is provided with two FL 13 flange openings, one on each side. The opening on the right side, seen from the D-end, is supplied with a flange with two holes for M40 cable glands. On delivery the holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the

other side is provided with a cover flange.

The motors can also be provided with an extra large terminal box, standard for voltage code S and frame size 280. See variant code 019 under the heading

“Terminal box”. This will increase the dimension HD by 32 mm. The box is supplied with two FL 21 openings. The right opening is provided with a flange with two holes for M63 cable glands. The holes are sealed by means of plastic plugs. Cable glands are not supplied. The opening on the other side is provided with a cover flange. The box can also be provided with an FL 13 opening towards the N-end.

When new motors are manufactured the terminal box can be mounted on the left or the right side. See variant codes 021 and 180 under the heading “Terminal box”.

Terminal box size 63-80.

Terminal box size 90-100.

Terminal box size 112-132.

Terminal box size 160-180

Terminal box size 200-280.

Connections

The terminal block is provided with 6 terminals for connecting Cu-cable. The terminals are marked in accordance with IEC 60034-8.

Connection openings

Motor size	Opening	Metric cable entry	Method of connection	Terminal bolt size	Maximum connectable Cu-cable area, mm ²
63	Knock-out opening	1 x M16 x 1.5 1 x Pg 11	Screw terminal	M4	2.5
71-80	Knock-out opening	2 x M20 x 1.5 2 x Pg 16	Screw terminal	M4	4
90-100	Knock-out opening	2 x (M25 + M20)	Screw terminal	M4	6
112-132	Knock-out opening	2 x (M25 + M20)	Cable lug	M5	10
160-180	Knock-out opening	2 x (2 x M40 + M16)	Cable lug	M6	35
200-250 ¹⁾	2 x FL 13	1 x (2 x M40 + M16)	Cable lug	M10	70
280	2 x FL 21	1 x (2 x M63 + M16)	Cable lug	M10	70

Bearings

The motors are provided with bearings according to the tables below.

Greater axial forces can be tolerated if the motors are provided with angular contact ball bearings. Note that

in such cases the axial force must only operate in one direction.

Motor versions with roller bearings tolerate greater radial forces.

Basic version with deep groove ball bearings

Transport locking

Motors provided with roller bearings or angular contact ball bearings are fitted with a transport lock to prevent damage to the bearings, due to vibration, during transport.

Axially-locked bearings

The table below shows which of the motor's bearings are axially locked in the bearing seat. In motor sizes 56 to 80 the locking is done by an inner bearing circlip, in motor sizes 90 to 280 by an inner bearing cover.

See also variant code 042 under the heading "Bearings and lubrication".

Motor size	Foot-mounted motors	Flange-mounted motors	
		Large flange	Small flange

¹⁾ A spring-washer at the N-end presses the rotor toward the D-end.

Lubrication

The motors are delivered with bearing grease for use at normal temperatures in dry or humid environments. The motors are lubricated for ambient temperatures 40°C and in some cases even above 40°C, see table 1 next page.

Motor sizes 63-180 are provided with shielded bearings. On request, motor sizes 90 to 180 are provided with grease nipples for regreasing, see variant code 041 under the heading "Bearings and lubrications".

Motor sizes 200-280 are provided with grease nipples for re-greasing as standard.

The lubrication interval L_1 , suitable for relubricated bearings, is defined as the number of operating hours after which 99 per cent of the bearings are adequately lubricated.

Lubrication intervals and grease quantities are specified on a plate on the motor as well as in the manual supplied with the motor.

The grease lifetime L_{10} , suitable for permanent lubricated bearings, is defined as the number of operating hours after which 90 per cent of the bearings are adequately lubricated. 50 per cent of the bearings achieve two times this figure. Maximum lifetime, however, should be regarded as 40000 hours.

In case of high ambient temperatures the shaft loads must be reduced compared to permissible loadings in the table (see pages 174 to 177), please contact ABB.

6

Table 1: Grease lifetime L_{10} in deep groove ball bearings of type 2Z in horizontally mounted motors in continuous running duty.

Motor	r/min	Ambient temperature and rated output											
		25 °C		40 °C		50 °C		60 °C		70 °C		80 °C	
		Basic	High	Basic	High	Basic	High	Basic	High	Basic	High	Basic	High

	1500	40000	40000	40000	40000	40000	40000	27000					
132	3000				24000			23000					
	1500	40000	40000	40000	40000	40000	22000	40000		35000			
160	3000				31000	26000	17000	14000	9000				
	1500	40000	40000	40000	40000	40000	25000	37000					
180	3000		38000	38000	34000	34000	29000	20000	15000	10000	8000		
	1500	40000	40000	40000	38000	40000	20000	28000		15000			

In vertically mounted motors, the grease lifetime is half the figures above.

For applications corresponding to the empty cells in the table, please contact ABB. These applications can imply reduced lifetime for bearings and winding. Motors with roller bearings (optional) have considerably shorter grease life. For continuous operation regreasing nipples should be considered.

Lubrication intervals

ABB follows the L1-principle in defining lubrication interval. That means that 99% of the motors are sure to make the interval time. The lubrication intervals can also be calculated according to the L10-principle, which are normally doubled compared to

L1-values. Values available from ABB at request.

The table below gives lubrication intervals according to the L1-principle for different speeds. The values are valid for horizontal mounted

motors (B3), with about 80°C bearing temperature and using good quality grease with lithium complex soap and with mineral or PAO-oil.

For more information, see ABB's Low Voltage Motors Manual.

Frame size	Amount of grease g	3600 r/min	3000 r/min	1800 r/min	1500 r/min

280	35	1000	1800	-	-
280	70	-	-	4000	5300

Permissible loading on shaft

Pulley diameter

When the desired bearing life has been determined the minimum permissible pulley diameter can be calculated with F_R , according to the formula:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot F_R}$$

Bearing life

The nominal life is defined as the number of hours that are attained or exceeded by 90% of identical bearings, in a large test series, under certain specified conditions. 50% of the bearings attain a life of as much as 5 times this figure.

The life of bearings is dependent on various factors such as bearing load, motor speed, operating temperature and the purity of the grease. The permissible radial and axial loading for different motor sizes is shown in the table on the following pages.

The table is valid for 50 Hz. For 60 Hz and/or some other bearing life than specified in the table the values are changed according to the table on the right.

The table values assume the occurrence of only radial

where:

D = diameter of pulley, mm

P = power requirement, kW

n = motor speed, r/min.

K = belt tension factor, dependent on belt type and type of duty. A common value for V-belts is $K = 2.5$

F_R = permissible radial force according to the tables

or axial forces. In the case of simultaneous radial and axial forces information can be supplied on request. It is assumed that the radial force is applied at the end of the motor shaft.

Permissible force at changed bearing life or supply frequency

Bearing life in hours at		Permissible force, as percentage of value in tables
50 Hz	60 Hz	
25,000	21,000	100% of value for 25,000 hours
40,000	33,000	100% of value for 40,000 hours
63,000	52,000	86% of value for 40,000 hours
80,000	67,000	80% of value for 40,000 hours

Permissible radial forces

The table at right shows the permissible radial force in Newton assuming zero axial force.

Permissible loads of simultaneous radial and axial forces will be supplied on request.

The bearing life, L_{10} , is calculated according to SKF's theory on bearing life $L_{10_{aah}}$, which also takes the purity of the grease into consideration. An adequate lubrication is a necessary prerequisite for the table at right.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{max}})$$

E = length of shaft extension in basic version.

Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force. The values are based on normal conditions at 50 Hz with standard bearings and calculated bearing lives of 20,000 and 40,000 hours.

At 60 Hz the values are to be reduced by 10%.

Mounting arrangement IM B3

For two-speed motors, the values are to be based on the higher speed. The permissible loads of simultaneous radial and axial forces will be supplied on request.

Given axial forces F_{AD}' assumes D-bearing locked by means of locking ring.

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Type designation	M3AA 112 M
Pole number	4
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	4 kW
Product code	112022-ADC
Variant codes if needed	

Motor size

A	B	C	D, E, F	
M3AA	112 M	3GAA 112 022	- ADCG2, 122, 043, etc.	
		1 2 3 4 5 6 7 8 9 10 11 12 13 14...		
				A Motor type B Motor size C Product code D Code for mounting arrangement E Voltage and frequency code F Generation code followed by variant codes

Explanation of the product code

Positions 1 to 4

3GAA/3GVA =

Totally enclosed motor with Aluminum stator frame

Position 4

Type of rotor

A = Squirrel cage rotor

Positions 5 and 6

IEC size

06 = 63	16 = 160
07 = 71	18 = 180
08 = 80	20 = 200
09 = 90	22 = 225
10 = 100	25 = 250
11 = 112	28 = 280
13 = 132	

Position 7

Pole pairs

1 = 2 poles
2 = 4 poles

Positions 8 to 10

Running number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted motor
B = Flange-mounted motor. Large flange with clearance holes. Flange motors come without CC-number in the rating plate due to American legislation.
H = Foot- and flange-mounted motor. Large flange with clearance holes. Must be ordered using variant code 009.

Position 13

Voltage and frequency: See tables below

Position 14

Version A,B,C, CG2... =

Generation code followed by variant codes

6

The bullets in the product code description:

Voltage and frequency code

Global motor fulfilling EFF1, CSA-EEV and EAct certification requirements CC031A.

¹⁾ NEMA Nominal efficiency acc. to IEEE112.

²⁾ EAct classification is valid for motors from 1 HP to 200 HP.

³⁾ High output designs are non-CENELEC harmonized.

Global Motors acc. to EFF1, EPCAct, CSA, EEV, UR

Technical data

Totally enclosed squirrel cagethree phase motors, aluminum frame

6 Global motor fulfilling EFF1, CSA-EEV and EPCAct certification requirements CC031A.

¹⁾ NEMA Nominal efficiency acc. to IEEE112.

²⁾ EPCAct classification is valid for motors from 1 HP to 200 HP.

³⁾ High output designs are non-CENELEC harmonized.

General purpose global motors - Variant codes

Code	Variant	Motor size						
		63	71-80	90-100	112-132	160-180	200-250	280
1)								
Balancing								
052	Vibration acc. to grade A (IEC 60034-14).	P	P	P	S	S	S	S
417	Vibration acc. to grade B (IEC 60034-14).	NA	NA	P	R	R	R	R
423	Balancing without key.	P	P	P	R	R	R	R
424	Full key balancing.	P	P	P	P	P	P	P
Bearings and lubrication								
036	Transport lock for bearings.	NA	NA	NA	M	M	M	M
037	Roller bearing at D-end. Transport lock included.	NA	NA	NA	NA	M	M	M
039	Cold resistant grease. For ambient temperatures -40 - +100° C.	M	M	NA	P	P	P	P
040	Heat resistant grease. For bearing temperatures -40 - +160° C. Mandatory for ambient temperatures >50° C.	M	M	P	S	S	S	S
041	Bearings regreasable via grease nipples.	NA	NA	NA	M	M	S	S
042	Locked drive-end. Standard for sizes 90-132, flanged versions.	NA	M	S	M	S	S	S
043	SPM nipples.	NA	NA	P	P	P	P	P
057	2RS bearings at both ends. Grease for bearing temperatures -20 - +110° C.	M	M	P	M	M	M	M
058	Angular contact ball bearing at D-end, shaft force away from bearing. Transport lock included.	NA	NA	P	M	M	M	M
059	Angular contact ball bearing at N-end, shaft force towards bearing. Transport lock included.	NA	NA	P	M	M	M	M
188	63-series bearings.	NA	NA	P	M	S	S	S
796	Grease nipples JIS B 1575 PT 1/8 Type A				M	M	M	M
797	Stainless steel SPM Nipples				M	M	M	M
798	Stainless steel grease nipples				M	M	M	M
Branch standard designs								
142	"Manilla" winding connection. (440 VD series, 220 VD parallel, 60Hz) Single speed motors only.				P	P	P	P
178	Stainless steel/acid proof bolts.	M	M	M	M	M	M	M
209	Non-standard voltage or frequency (special winding).				R	R	R	R
425	Corrosion protected stator and rotor core.	P	P	P	P	P	P	P
Coupling								
035	Assembly of customer supplied coupling-half.				R	R	R	R
Dimension drawing								
141	Binding dimension drawing	M	M	M	P	P	P	P
Drain holes								
065	Plugged drain holes.	M	M	M	M	M	M	M
066	Modified drain hole position. IP 54 for sizes 63-100. Specify IM designation.	M	M	M	M	M	M	M
Earthing bolt								
067	External earthing bolt. Earthing screw for connection of external protective earth.	M	M	M	M	M	M	M

1) Certain variant codes cannot be used simultaneously.

S = Included as standard.

M = On modification of a stocked motor, or on new manufacture, the number per order may be limited.

P = New manufacture only.

R = On request.

NA = Not applicable.

Code	Variant	Motor size						
		63	71-80	90-100	112-132	160-180	200-250	280

1)

Heating elements

	Motor size	Element capacity						
	63-71	8 W						
	80-160	25 W						
	180-280	50 W						
450	Heating element 100-120 V.	M	M	NA	M	M	M	M
451	Heating element 200-240 V.	M	M	NA	M	M	M	M

Mounting arrangements

NOTE: Multiple flange sizes available using two-piece flange system, see page 48.

007	IM 3001 flange mounted, IEC flange, from IM 1001 (B5 from B3). Large flange with clearance holes.			NA	NA	NA	M	M
008	IM 2101 foot/flange mounted, IEC flange, from IM 1001 (B34 from B3). Small flange with tapped holes. Frame size 180 not available.	NA	M	M	M	R	NA	NA
009	IM 2001 foot/flange mounted, IEC flange, from IM 1001 (B35 from B3). Large flange with clearance holes.	M	M	M	M	M	M	M

Painting

114	Special paint colour, standard grade.	M	M	P	M	M	M	M
179	Special paint specification.	NA	NA	R	R	R	R	R

Protection

005	Protective roof, vertical motor, shaft down. Vertically mounted motors with shaft extension downwards. See also the Accessories section for further information.	M	M	M	M	M	M	M
072	Radial seal at D-end.			NA	M	M	M	M
158	Degree of protection IP65 or IP65X. Dust proof version.	P	P	NA	M	M	M	M
211	Weather protected, IP xx W	NA	NA	NA	P	P	P	P
403	Degree of protection IP 56. Water from waves which splash over must not enter in serious quantities.	P	P	NA	M	M	M	M
784	Gamma-seal at D-end.			NA	M	M	M	M

Rating and instruction plates

003	Individual serial number.	P	P	M	S	S	S	S
138	Mounting of additional identification plate, aluminium.	M	M	M	M	M	M	M
139	Additional identification plate delivered loose.	M	M	M	M	M	M	M
163	Frequency converter rating plate. Rating data according to quotation.			M	M	M	M	M

Shaft and rotor

069	Two shaft extensions as per basic catalogue. Standard shaft material.	P	P	NA	P	P	P	P
070	One or two special shaft extensions, standard shaft material.	P	P	R	R	R	R	R
165	Shaft extension with open key-way.	P	P	R	P	P	P	P

Standards and regulations

010	Fulfilling CSA Safety Certificate.	S	S	S	S	S	S	S
011	Fulfilling CSA. Energy efficiency verification (010 included). For frame sizes 90-100 own product code, contact ABB.	NA	NA	NA	S	S	S	S
029	Fulfilling Underwriters Laboratory (UL) requirements.	S	S	S	S	S	S	S
408	Energy efficient design, according to IEEE, Std 112	NA	NA	R	S	S	S	S

1) Certain variant codes cannot be used simultaneously.

S = Included as standard.
M = On modification of a stocked motor, or on new manufacture, the number per order may be limited.

P = New manufacture only.
R = On request.
NA = Not applicable.

Code	Variant	Motor size

It's the details that make the difference

■ Designed, certified and labeled to meet the safety requirements according to CE, UL/UR and CSA, and the efficiency requirements according to CE, EFF1, EPE and CSA/EEV.

■ Suitable for variable frequency drive applications.

■ Terminal box with 6 lead terminal board, the winding can be connected in either D or Y configuration. The terminal box has plenty of space and is designed for easy and secure installation.

■ Degree of protection / Enclosure: IP 55 / Totally enclosed (TEFC) Waterproof Motor

- Protected against Dust / Limited ingress permitted (no harmful deposit)
- Protected against low pressure jets of water from all directions / Limited ingress permitted.

Other protections available on request.

■ The frame is made of corrosion resistant die-cast aluminum with low copper content. Together with a surface treatment and final powder painting with Epoxy/Polyester powder, it gives a very high corrosion protection suitable for industrial applications, indoors and outdoors.

■ Reliable grease-lubricated ball bearings with C3 clearance as standard, designed for low running temperature and long service life.

■ Made by ABB according to the highest quality standards.

Variant codes	214
Rating plates	214
Dimension drawings	215
Brake motors in brief	217

Mechanical design

Degrees of protection

The degrees of protection, as per IEC standards 60034-5, are: terminal box and electrical components of the brake – IP 55; other motor parts – IP 55.

Mechanical components of the brake – IP 23 S.

Mechanical parts of the brake, protected with a rubber ring and V-ring – IP 55 (optional: variant code 213).

Mounting arrangements of brake motors

The design of the brake motor enables it to operate in any mounting position. Nevertheless, the position of the drain holes should be taken into account.

Vertically mounted motors with the shaft end downwards, intended for outdoor operation, should be provided with a protective roof to avoid water ingress and the possibility of ice forming on the brake.

Operation

ABB's brake motor is a standard motor modified for braking duties, i.e. a three phase induction motor with standard dimensions and output rating.

The electro-magnetic disc brake is powered, by either DC or three phase AC current, from a rectifier located in the motor terminal box.

When the brake coil is de-energised, the brake is actuated by spring pressure.

The axial movement of the brake disc performs a dual

braking action against the moving electromagnet and the motor shield, without pressure or impact being transmitted to the bearings.

The brake linings withstand high temperatures, have great wear resistance and give long life. Because of the very low wear of the braking disc, the brakes of the ABB motor usually require only one-third of the maintenance required by other common brake types in the market.

Lubrication and bearings

The bearings incorporate two Z-type non-friction sealing plates. The amount of grease is sufficient for the life of the bearing.

The motors are fitted with the bearings listed in the table.

7

Brake design

General

Electromagnetic disc brakes work by the action of a set of springs and are released when applying voltage to the brake coil.

This means that the motor will brake automatically

in case of any voltage failure, as a significant safety feature. The brake is always functional, irrespective of the mounting position of the brake motor. The external dimensions for both the DC and the three phase AC brake are identical.

Detailed view

- 1 Rectifier (DC brake only)
- 2 Motor N-end shield
- 3 Screw
- 4 Brake disc
- 5 Dust protection (optional)
- 6 Armature
- 7 Hand release
- 8 Hand release bellows
- 9 Air gap regulation screw
- 10 Magnet
- 11 Fan cover
- 12 Fan
- 13 Torque regulation screw

Brake disc

The brake lining is made from asbestos-free material. It is highly resistant to wear and has excellent thermal conductivity, thus giving consistent performance even at high temperatures.

The brake disc withstands a large number of braking operations and is insensitive to dust and moisture.

The core of the brake disc is grooved and made of special polyamide that absorbs impacts, enabling it to work with high vibration applications.

Readjusting the air gap

The brakes are supplied with the air gap adjusted to its nominal value.

The air gap has to be readjusted to its nominal value when the wear of the lining reaches the readjustment value (X_n) stated in table 1.

For this operation, work on the bushings (9) after releasing the bolts (3).

Tighten up the bushings in the magnet support (10) as required to reach the rated air gap value stated in table 1.

Tighten the bolts (3) to the specific torque, C (see table 1).

At the end of the operation, check that the air gap complies with the specified value and is uniform across the whole surface.

Replacing the brake disc

The brake disc must be replaced when reaching the minimum permissible lining thickness stated in Table 1.

Connection for DC brake

The brake is fed via a rectifier. The voltage stated on the brake rating plate is that of the brake coil on the DC side of the rectifier.

Standard connection (t'21~)

Reconnection (t21~)

When it is necessary to reduce the braking time, the connections should be modified according to the following diagram. The breaking of the circuit on the AC side is controlled by using an auxiliary contact of the contactor.

Reconnection (t21=)

To obtain instant braking, please see table 2 (t21=), use the following diagram.

7 Connection of AC brake

The coil should only be used between 90% - 110% of its rated voltage.

Standard connection (t21)

Reconnection (t21f)

To obtain instant braking, the coil must be fed separately from the motor terminals.

Remark:

Regardless of whether a DC or AC brake is used, the brake is usually connected to the motor terminals of single-speed motors. It can, however, also be delivered with a separate brake supply (variant code 086). In case of two-speed motors, the brake is always connected separately.

Rectifier

The rectifier is a device for DC brake applications. It is highly resistant to temperature as well as to voltage peaks, and it includes an additional protection of the auxiliary contact of contactor. Its compact design enables it to be placed in the motor terminal box.

The coil can operate reliably between of 90% and 110% of the rated voltage. For voltages outside these limits, please consult ABB.

Hand release

The device is a lever used to override the action of the brake springs for as long as it is applied.

Hand release is included as standard, except for frame size 63, where it is available as option, see variant code 088.

When installing the release lever, please proceed as follows:

Remove the rubber protection, if fitted. Insert the screw (1) with its washer, position the spring (2) and washer (3) and tighten the nut (4) firmly. Fit the other washer and the square-head nut (5); adjust the position of the nut in relation to the moving magnet (Y value) with the central screw (1). When the required value is reached, tighten the inner nut (4) while holding nut (5) fixed.

Important: The use of the release lever necessitates periodic checking of the Y value and the air gap. The air gap should never exceed the maximum values stated in brake data table 1. Failure to check could result in malfunction due to mechanical locking of the armature.

Torque adjustment

In brake motors from frame size 71 up to 180, the braking torque can be adjusted from 100% up to 55% of the nominal torque as standard.

Instructions for how to regulate torque are delivered with the brake motor. These instructions describe how to loosen the torque regulation screw (13), as well as the relation between dimension A and torque.

The braking torque is also adjustable as standard for frame sizes 63 MA and MB, having a torque range from 100% down to 10% of the nominal torque.

Reduced braking torque, from 60% up to 33%, is available by using variant code 087 (applies for frame sizes 71-180).

Brake operating times

The operating times stated in brake data table 2 are valid for the nominal air gap and warmed-up brake coil.

t_1 = Brake release time.

t_{21} = Braking time.

U_2 = Rated voltage.

T_B = Nominal braking torque.

Brake release time = the time from when voltage is applied to the brake coil up to the ceasing of braking action.

Braking time = the time from when the current is switched off up to the starting of braking action.

Special brakes (with DC brake)

Two-speed motors with one or two windings, motors with 9 or 12 terminals, and motors that have to be started with star-delta connection, with brake coil for DC, are supplied with the rectifier fitted in the motor terminal box, without the two wires that normally connect it to the motor terminal. The AC supply to the rectifier is independent to the motor supply and should be fed by the main contactor.

The standard brake coil connection voltages for 50 and 60 Hz will be those stated in the following table, unless stated otherwise in the order:

¹⁾ H.W. = Half-wave rectifier, F.W. = Full-wave rectifier

²⁾ Special coil on request

³⁾ Available using variant code 285

Rectifier input voltage (V_{AC})	Rectifier type ¹⁾	D.C. coil brake voltage (V)
110	F.W.	102 ²⁾

Weight	(kg)	1.2	1.2	0.8	1	1.6	2.7	4	5.2	9	16.2

¹⁾ Braking torque after performing 10.000-15.000 operations.

²⁾ Delivered torque : Torque value marked on rating plate corresponding to the braking torque when the brake motor leaves the ABB factory. Tolerance of +/-10% of this value is accepted. Ambient conditions, temperature on friction surfaces, brake motor positioning and transport applied on the product can affect this value.

In general, all the variables mentioned above can affect the braking torque values, so if an accurate value is needed, ABB recommends it is measured in the real application. This allows adjustment to the required value by using the torque regulation facility.

Table 2.

Braking (t_{21}) and release (t_1) times

Brake motor sizes		M3VRF 63 M_	M3VRS 63 M_	63 A/B	71	80	90	100	112	132	160/180
Brake type		K01	AC1	075.5	088.6	100.6	120.6	140.6	155.6	170.6	206.6
AC brake coil											
- release time	t_1 (ms)	–	10	5	6.6	5	5.1	5.5	5	5	5.5
- standard braking time	t_{21} (ms)	–	25	25	25	30	40	50	50	65	105
- fast braking time	t_{21f} (ms)	–	10	10	10	10	10	10	10	10	10
DC brake coil											
- release time	t_1 (ms)	45	–	20	20	25	35	40	50	60	100
- std connection time	t'_{21} (ms)	–	–	150	170	210	330	420	720	850	930
- reconnection time	t_{21} (ms)	–	–	30	35	45	70	90	155	190	150
- fast reconnection time	t_{21} (ms)	15	–	10	10	15	20	35	45	55	85

When fast braking in AC brake is used, the contactor that is operating the coil of the brake has to be over dimensioned taking in consideration a high inductive load.

Calculations

Maximum number of connections per hour

The connection frequency that may be achieved with the motors is limited by the temperature rise that they undergo both in the coil and in the rotor. The brakes are designed so that they may withstand the kinds of duty for which these motors are intended.

The maximum number of connections per hour depends on:

- the power P_2 required after reaching the rated speed, i.e. the relative load P with regard to the rated power P_n .

$$P = \frac{P_2}{P_n} \times 100 \%$$

- the total inertia J in kgm^2 of the mass to be accelerated (inertia of the rotor J_m as per catalogue, plus the additional inertia J_b of the driven machine) in relation to the motor shaft, that is, J_b multiplied by the square of the coefficient of the load speed divided by the motor speed.

$$J = J_m + J_b \times \left[\left[\frac{n_b}{n_m} \right]^2 \right]$$

- the relative duration factor for service S4.

$$S4 = \frac{\text{connection time}}{\text{connection time} + \text{downtime}} \times 100 \text{ in } \%$$

For calculations of the maximum number of connections/hour, please consult ABB.

Required data:

- Type of brake motor
- Load inertia reduced at motor shaft
- Required power P_2
- Type of service

Permitted friction work per operation

Friction work per operation must not exceed the WR_{\max} values stated in brake data table 1.

$$WR = \frac{1}{2} \times J \left[\frac{\pi \times n_m}{30} \right]^2 \text{ in joules}$$

Friction work per hour

The friction work can be calculated if the number of operations per hour is known.

This value must be equal to or less than the PR_{\max} stated in brake data table 1.

$$PR = WR \times c/h$$

Braking time

The total braking time from the disconnecting of brake until the machine is stopped is calculated as follows:

$$t = 104.6 \times \frac{J \times n_m}{T_B} + t_{21}$$

t and t_{21} are in ms

Maximum number of operations until wear of 0.1 mm

The service life, expressed in switching operations, can be calculated with the aid of the values $WR_{0.1}$ given in brake data table 1.

$$L_{0.1} = \frac{WR_{0.1}}{WR}$$

Number of operations before readjusting the air gap

With the X_n values in table 1 we can calculate the number of required operations until the readjustment of air gap becomes necessary.

$$L_n = \frac{X_n - X}{0.1} \times L_{0.1}$$

Options

Separate brake supply

For brakes which need an independent supply, please note the variant code 086 and the voltage for feeding the brake. When the motor is supplied via a frequency converter, both in the case of DC and AC, the brake should be supplied separately at rated voltage (constant). The separate brake supply can be connected directly, no separate terminal box is needed.

Dust protection

To protect the brake disc against dust, the brake can be supplied with a rubber protection ring and V-ring.

Variant code 213 should be stated in the order.

Braking torque reduction

Reduced braking torque range, from 60% up to 33%, is available by using variant code 087.

Protective roof

To protect motors from accumulation of water, ice or snow when installed outdoors in the vertical position and with the shaft downwards, the assembly should be fitted with a protective roof.

Variant code 005 should in this case be stated in the order.

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3ARF 112M
Pole number	4
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	4 kW
Product code	3GAR112401-ADE
Variant codes if needed	
Brake information	

A	B	C	D,E,F, G					
M3ARF 112 M		3GAR 112 401 - ADE, 088 etc.					A Motor type M3VRF/M3ARF (DC brake) M3VRS/M3ARS (AC brake) B Motor size C Product code D Mounting arrangement code E Voltage/frequency code F Generation code G Variant code	
		1 - 4	5 - 6 7	8 - 10	11	12	13	14

Explanation of the product code:

Positions 1 to 4

3GAA = Totally enclosed motor, aluminum frame

3GVA = Totally enclosed motor, aluminum frame, alternative design

Position 4

R = Brake motor

Positions 5 and 6

IEC-size

06 = 63 **12** = 112

07 = 71 **13** = 132

08 = 80 **16** = 160

09 = 90 **18** = 180

10 = 100

Position 7

Speed (Pole pairs)

1 = 2 poles **6** = 12 poles

2 = 4 poles **7** = > 12 poles

3 = 6 poles **8** = Two-speed motors

4 = 8 poles **9** = Multi-speed motors

5 = 10 poles

Position 8 to 10

Serial number

Position 11

- (dash)

Position 12

Mounting arrangement

A = Foot-mounted.

B = Flange-mounted. Large aluminum flange with clearance holes, sizes 63-100 and 180.

C = Flange-mounted. Small aluminum flange with tapped holes, sizes 63-100.

E = Flange-mounted. Large cast iron flange with clearance holes, sizes 112-160.

H = Foot- and flange-mounted. Large aluminum flange with clearance holes, sizes 63-100 and 180.

J = Foot- and flange-mounted. Small aluminum flange with tapped holes, sizes 63-100.

K = Foot- and flange-mounted. Large cast iron flange with clearance holes, sizes 112-160.

N = Flange mounted. Two piece cast iron flange (IEC-1) with clearance holes, sizes 90-132.

P = Foot- and flange-mounted. Two piece cast iron flange (IEC) with clearance holes, sizes 90-132.

Position 13

Voltage and frequency code

See table below

Position 14

Generation code = **C** (size 63), **E** (sizes 71-180)

The product code must be, if needed, followed by variant codes.

¹⁾ Braking-torque ratio

The bullets in the product code indicate choice of mounting arrangement and voltage and frequency code, see below and ordering information page.

Code letters for supplementing product code for mounting arrangement (pos 12):

Foot-mounted **A**
 Flange-mounted, 1 flange **B** for frame sizes 63-100, 180; **E** for frame sizes 112-160.
 Flange-mounted, 2 flanges **N** for frame sizes 90-132
 Flange-mounted, small flange **C** for frame sizes 63-100

Code letters for supplementing product code for voltage and frequency (pos 13):

Motor size	A		B		S		D	
	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz
63-132	–	–	–	–	220-230 V	230 VΔ	380-400 V	400 VΔ
160	220 V	220 VΔ	380 V	380 VΔ	230 V	230 VΔ	400 V	400 VΔ
Motor size	E		H		X			
	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz	Any other rated voltage or frequency, 690 V maximum			
63-132	500 V	500 VΔ	415 V	415 VΔ				
160	500 V	500 VΔ	415 V	415 VΔ				

General purpose brake motors - Variant codes

Code	Variant	M3VRF/S			M3ARF/S					
		63	71	80	90	100	112	132	160	180
Brakes										
086	Separate brake supply	M	M	M	M	M	M	M	M	M
087	Brake with reduced torque, torque range 60%-33% of nominal torque.	NA	P	P	P	P	P	P	P	p
088	Hand release	M	S	S	S	S	S	S	S	S
213	Brake with increased degree of protection. Rubber ring and V-ring for IP55 protection.	M	M	M	M	M	M	M	M	M
285	Reconnection of brake for separate dc supply at 24 V.	R	M	M	M	M	M	M	M	M
288	Brake motor with voltage code S for the motor and separate supply of the brake for voltage corresponding to code D.	R	M	M	M	M	M	M	M	M
289	Brake motor with voltage code D for the motor and separate supply of the brake for voltage corresponding to code S.	R	M	M	M	M	M	M	M	M
290	Brake motor with a.c. brake, change into d.c. brake keeping the voltage code.	R	M	M	M	M	M	M	M	M
291	Brake motor with d.c. brake, change into a.c. brake keeping the voltage code.	R	M	M	M	M	M	M	M	M
Special voltage										
209	Non-standard voltage or frequency (special winding) Different brake coil (e.g. 25 Vdc), max. 500 Vac.	R	R	R	P	P	P	P	P	P
Protection										
005	Protective roof, for vertical mounting with shaft end downwards.	M	M	M	M	M	M	M	M	M

For other variant codes please see section for standard aluminum motors or consult ABB.

- S** = Included as standard
- P** = New manufacture only.
- M** = On modification of a stocked motor or on new manufacture, the number per order may be limited.
- R** = On request.
- NA** = Not applicable.

7 Brake rating plates

The brake rating plates have the following arrangement:

Single phase motors in brief	235

In many respects single phase motors have the same properties as three phase motors, and mechanically they meet the same standards. There are several types of single phase motors (CSR, PSC and PSC-reg.).

Each type has its benefits and limitations, as described in the section below. Single phase motors are used in many industries and for many purposes.

Description and application

CSR

Starting and run capacitor

Single phase motor with attached run capacitor, starting capacitor and electronic start relay mounted in the terminal box.

The electronic start relay connects the starting capacitor instantly when the motor starts, and cuts out when the motor has reached its break-down torque. The connection time is limited to max. 2 sec., after which the starting capacitor is disconnected, regardless of whether the motor has reached its breakdown torque. The starter relay cannot reconnect until the mains voltage to the motor has been disconnected; this protects the starting capacitor and ensures that the motor can be protected with a thermal motor line circuit breaker.

The CSR motor with a starting torque of 140 - 160% is suitable for applications that require a high starting torque, such as compressors, hydraulic pumps that start with back pressure and centrifugal pumps where the shaft seal requires a high breakaway torque.

CSR model with electronic start relay.

Torque curve for CSR motor.

8

PSC

Run capacitor

Single-phase motor with attached run capacitor. The starting torque is 30 - 70%, which makes this motor particularly suitable for applications with low starting torque requirements, such as fans, circular saws, polishing machines and centrifugal pumps where the shaft seal does not require a high breakaway torque.

Basic PSC model.

PSC

for speed regulation

The motor's speed can be regulated by changing the voltage to the motor (twin-cable regulation) or by only changing the voltage to the circuit winding (three-cable regulation). The best regulation and the minimum loss in the motor is achieved only by changing the voltage to the circuit winding.

The voltage can be regulated using a transformer or a Triac control. The Triac control provides a greater loss in the motor and can contribute to noise in the motor.

To achieve good speed regulation it is important that the motor is suitable for the load. If the motor is too large for the load the regulation range will be small; at full speed the motor should not be loaded with less than 80% of its full load. With correct dimensioning it is possible to regulate speed down to approx. 30% of nominal speed.

Speed regulation is suitable for the following applications: fans where blades are mounted directly on the motor shaft and centrifugal pumps where the shaft seal does not require a high breakaway torque.

PSC model. Regulation of number of revolutions using electronic device (TRIAC).

Reversing

As a rule a single phase motor can only reverse when it stops completely before the rotational direction is changed. In CSR motors it is also important that the capacitor is discharged before the voltage is reconnected, as otherwise the starter relay will not connect the starter capacitor.

It is possible to design a PSC motor that is suitable for reversing. The motor has a joint start and circuit winding, which provides for very simple switching.

No load

Standard single phase motors cannot run idle for a long period. The losses are greater when running idle than at full load. If the motor is to run idle for a long period, specially designed windings must be produced.

Mechanical design

Stator

Stator framework, bearing shields and feet are made of aluminum alloy with low copper content.

Drain holes

Motors that will be operated in very humid or wet environments, and especially under intermittent duty, should be provided with drain holes. The appropriate IM designation, such as IM 3031, is specified on the basis of the method of mounting the motor.

In the basic design motors are supplied with drain holes as standard (see diagram below) on both D-end and N-end.

When mounting the motors, it should be ensured that the drain hole faces downwards. In the case of vertical mounting, the upper plug must be hammered home. In very dusty environments both plugs should be hammered home.

See variant codes 065 and 066 under the heading "Drain holes".

Terminal box and connections

Terminal box for sizes 56 to 63

The terminal box is made of aluminum and is located on top of the stator as standard. It is provided with two knockout openings (one Pg and one metric) and can be turned 4x90°.

Cable glands are not included. The size of the box is the same in size 56 and 63.

Position of terminal box

Motor size	Terminal box		
	on top	right side	left side
56-63	standard	–	–
71-100	standard	on request	on request

Terminal box examples

Motor sizes 56-80.

Motor sizes 90-100.

Terminal box for sizes 71 to 100

The terminal box is made of aluminum and is located either on the top of the motor, or on either side of the motor. The lower part of the box is integrated with the stator and allows cable entries from both sides.

It is provided with two knockout openings on each side. Cable glands are not included.

Degree of protection of standard terminal box is IP 55.

Connections

The terminal block is provided with 6 terminals for connecting Cu-cable. The terminals are marked in accordance with IEC 60034-8.

Connection openings

Motor size	Opening	Metric cable entry	Cable diameter, mm, min-max	Terminal bolt size	Maximum connectable Cu-cable area, mm ²
56-63	Knock-out opening	1 x M16 x 1.5; 1 x Pg 11	5-12	M4	2.5
71-80	Knock-out opening	2 x M20 x 1.5; 1 x Pg 16	8-15	M4	4
90-100	Knock-out opening	2 x (M25 + M20) x 1.5	11-16	M4	2.5 (for PCS) or 1.5 (for CSR)

Bearings

The motors are provided with bearings, according to the tables on the right.

Motor size	Standard bearing type	
	D-end	N-end
56	6201-2Z/C3	6201-2Z/C3
63	6202-2Z/C3	6201-2Z/C3
71	6203-2Z/C3	6202-2Z/C3
80	6204-2Z/C3	6203-2Z/C3
90	6205-2Z/C3	6204-2Z/C3
100	6306-2Z/C3	6205-2Z/C3

Axially-locked bearings

The table on the right shows which of the motor's bearings is axially locked in the bearing seat. In motor sizes 56 to 80 the locking is done by an inner bearing circlip, in motor sizes 90 and 100 by an inner bearing cover.

Motor size	Foot-mounted motors	Flange-mounted motors	
		Large flange	Small flange
56-63	On request	On request	On request
71-80	On request	D-end	On request
90-100	D-end ¹⁾	D-end ¹⁾	D-end ¹⁾

¹⁾ A spring washer at N-end presses the rotor towards D-end.

Lifetime of bearing/grease

The motors are supplied with bearings that are lubricated for life with a bearing grease for use at normal temperatures in dry or humid environments.

The grease's operating temperature is between -40 and +160°C. See also variant code 039 under the heading "Bearings and Lubrication".

The life time of the grease L10 is defined as the number of operating hours after which 90% of the bearings are sufficiently well lubricated. 50% of the bearings can achieve a grease life time that is twice as long.

The maximum life time of the grease should, however, be considered to be 40,000 hours, equivalent to around 5 years.

Motor size	No. of poles	Hours
56-80	2-6	40.000
90	2	30.000
90	4-6	40.000
100	2	28.000
100	4-6	40.000

Pulley diameter

When the desired bearing life has been determined, the minimum permissible pulley diameter can be calculated with FR, according to the formula:

$$D = \frac{1.9 \cdot 10^7 \cdot K \cdot P}{n \cdot FR}$$

Where:

D = diameter of pulley, mm

P = power requirement, kW

n = motor speed, r /min

K = belt tension factor, dependent on belt type and type of duty. A common value for V belts is K= 2.5

FR = permissible radial force

Permissible loading on shaft

The table below shows the permitted radial force in Newtons at zero axial force.

The permitted load of combined radial and axial force is available on request.

The bearing's life time, L_{10} , is calculated according to SKF's new theory on the life time of bearings, L_{10aah} , which also takes into account the purity of the grease.

If the radial force is applied between points X_0 and X_{max} , the permissible force F_R can be calculated from the following formula:

$$F_R = F_{X_0} - \frac{X}{E} (F_{X_0} - F_{X_{max}})$$

E = length of shaft extension in basic version

Permissible axial forces

The following tables give the permissible axial forces in Newton, assuming zero radial force.

Permissible radial forces

Motor size	No. of poles	Length of shaft extension E (mm)	Ball bearings			
			Basic design with deep groove ball bearings			
			25,000 hours		40,000 hours	
F_{X_0} (N)	$F_{X_{max}}$ (N)	F_{X_0} (N)	$F_{X_{max}}$ (N)			
56	2	20	240	200	260	200
56	4	20	300	200	280	200
56	6-8	20	340	280	340	280
63	2-4	30	490	400	490	400
71	2-6	30	680	570	680	570
80	2-6	40	930	750	930	750
90	2-6	50	1010	810	1010	810
100	2-6	60	2280	1800	2280	1800

The permitted load of combined radial and axial force is available on request.

General purpose single phase motors – Variant codes

Code 1)	Variant	Motor size		
		56-63	71-80	90-100
Balancing				
052	Vibration acc. to grade A (IEC 60034-14).	P	P	P
423	Balancing without key.	P	P	P
424	Balancing with full key.	P	P	P
Bearings and lubrication				
036	Transport lock for bearings.	NA	NA	M
037	Roller bearing at D-end. Transport lock included.	NA	NA	M
039	Cold resistant grease. For bearing temperatures -55...+100°C.	M	M	M
040	Heat resistant grease. For bearing temperatures -25...+150°C. Mandatory for ambient temperatures > 50°C.	M	M	M
041	Bearings regreasable via grease nipples.	NA	NA	M
042	Internal bearing cover, locked at D-end.	NA	M	M
057	2RS bearings at both ends. Grease for bearing temperatures -20...+110°C.	M	M	M
058	Angular contact ball bearing at D-end, shaft force away from bearing. Transport lock included.	NA	NA	M
059	Angular contact ball bearing at D-end, shaft force away towards bearing. Transport lock included.	NA	NA	M
188	63-series bearings.	NA	NA	M
Branch standard design				
079	Silumin-alloy rotor cage.	NA	P	P
178	Stainless steel/acid proof bolts	M	M	M
209	Non-standard voltage or frequency (special winding)	P	P	P
425	Corrosion protected stator and rotor core.	P	P	M
Cooling system				
068	Metal fan.	NA	M	M
075	Cooling method IC 418 (without fan).	P	P	P
183	Separate motor cooling (fan axial, N-end).	NA	M	R
Dimension drawing				
141	Binding dimension drawing.	M	M	M
Drain holes				
066	Modified drain hole position.	M	M	M
Earthing bolt				
067	External earthing bolt. Earthing screw for connection of external protective earth.		M	M M
Heating elements				
	Motor size	Element capacity		
	56-71	8 W		
	80-100	25 W		
450	Heating element 100-120 V.	M	M	M
451	Heating element 200-240 V.	M	M	M

1) Certain variant codes cannot be used simultaneously.

S = Included as standard.
M = On modification of a stocked motor, or on new manufacture, the number per order may be limited.

P = New manufacture only.
R = On request.
NA = Not applicable.

Code 1)	Variant	Motor size		
		56-63	71-80	90-100
Insulation systems				
014	Winding insulation class H (PSC-motors only).	P	P	P
Mounting arrangements				
008	IM 2101 foot/flange mounted, from IM 1001 (B34 from B3).	M	M	M

General purpose single phase motors in brief, basic design

Motor size		56	63	71	80	90	100
Stator and feet	Material	Die-cast aluminum alloy. Feet integrated with stator in sizes 63; loose feet in sizes 56 and 71-100.					
	Surface treatment	One-component modified polyester powder paint. Munsell blue 8B 4.5/3.25 / NCS 4822 BO5G, $\geq 30 \mu\text{m}$. / RAL 5014					
Bearing end shields	Material	Die-cast aluminum alloy.					
	Surface treatment	One-component modified polyester powder paint. Munsell blue 8B 4.5/3.25 / NCS 4822 BO5G, $\geq 30 \mu\text{m}$. / RAL 5014					
Bearings	D-end	6201-2Z/C3	6202-2Z/C3	6203-2Z/C3	6304-2Z/C3	6205-2Z/C3	6306-2Z/C3
	N-end	6201-2Z/C3	6201-2Z/C3	6202-2Z/C3	6203-2Z/C3	6204-2Z/C3	6205-2Z/C3
Axially locked bearings	Internal bearing cap	¹⁾	¹⁾	¹⁾	¹⁾	D-end	D-end
		¹⁾ By foot-mounted motors and motors with small flange: A spring washer in N-end presses the rotor against D-end.					
Bearing seals	D-end	V ring.					
	N-end	Labyrinth seal.					
Lubrication		Permanently lubricated bearings. Grease temperature (-30...+150°C).					
Terminal box	Material	Die-cast aluminum alloy.					
	Surface treatment	Similar to stator.					
	Screws	Steel 5 G, galvanised and yellow chromated.					
Connections	Connection openings	4 x M16		4 x M20		2 x (M25 + M20)	
	Terminal box Max Cu range, mm ²	Screw terminal, 6 terminals. PSC = 2.5. CSR = 1.5.					
Fan	Material	Polypropylene. Reinforced with 20% glass fibre.					
Fan hood	Material	Metal.					
Stator winding	Material	Copper.					
	Impregnation	Polyester coating. Tropicalized.					
	Insulation class	Insulation class F.					
Rotor winding	Material	Die-cast aluminum.					
Balancing method		Half key balancing.					
Key ways		Closed key way.					
Heating elements	On request	8 W			25 W		
Drain holes		Standard.					
Enclosure		IP 55.					
Cooling method		IC 411.					

Integral Motors

Totally enclosed squirrel cage three phase low voltage motors,
Sizes 71 - 100, 0.37 to 2.2 kW

Features

Integral Motor - the choice for a demanding environment

Demanding environments place a requirement for high protection class motors with good vibration endurance. This is why the integral motor is IP 55 protected. In addition to the wide selection of digital and analogue user interfaces, the integral motor offers higher integration into the modern control system with its fieldbuses, to meet the demands for distributed control.

Products according to your needs

Integral motor models are available as 2, 4 or 6 pole versions. The integral motor is delivered as an integrated, ready-to-use unit equipped with a brake, separate ventilation, or any other selected variants. The pre-set parameters offer configuration required by most of the simple applications and make commissioning and use as easy as possible. For more demanding applications, an optional control panel or PC software tool can be used to select from a range of more advanced application macros.

Fulfil EMC limits at every level

Electro Magnetic Compatibility is an important issue in AC automation. The integral motor complies with European distribution limits with the help of built-in EMC filters, so that no external filtering is needed. Standard models of the integral motor fulfil EMC requirements in industrial environments and models with RFI filter in the domestic environments.

Excellent features for OEM's

The integral motor provides a low cost way to enhance an application's performance: it is not limited to "soft starting" applications in which integrated motor-drive combinations have traditionally been used.

Features include up to 180 % overload capacity during start-up, PTC interface, built-in mechanical brake control and electrical braking produce an unbeatable combination for material handling applications. The robust design withstands supply voltage fluctuations and the wide selection of fieldbus options makes integration into automation systems easy.

One of the most interesting features is the Positioning Macro, which together with an optional encoder makes it possible to eliminate expensive PLCs in simple positioning applications. This feature is useful for example in controlling conveyor lines or opening doors.

Intelligent control for pumps and fans

The built-in PID controller's two parameter sets make the integral motor ideally suited for pump and fan applications. The integral motor can be configured to indicate directly parameters such as the flow rate of a pumped fluid, for instance. With the integral motor it is possible to make a connection to building automation via a Lon-Works fieldbus adapter.

Typically no overload capacity is needed in pump or fan applications. This allows the integral motor to be optimised for squared torque use.

The integral motor offers

- Mounting to demanding environment
- Ready-to-use configuration with pre-set parameters
- Full configurable functionality when using an IP65 control panel
- Easy adaptation to automation systems with wide range of fieldbuses
- Built-in EMC filter and brake chopper
- Simple positioning tasks with Positioning application macro
- Optimised selection integral motor models and integrated variants

Connections

To achieve maximum compatibility the integral motor provides all necessary connections and options. Options are IP 65 protected which means that they can withstand extremely hostile environments like places with high moisture. Options are placed straight on the side of the drive and no extra installing space is required.

The various options are shown below. After the integral motor has been specified, it will be delivered as a ready assembled and parametrized unit.

With analogue inputs you can set the output frequency or control positioning speed or direction. As there are two analogue inputs, intelligent PID control is possible.

Analogue output can indicate chosen operating data values like output current or DC bus voltage.

With digital inputs the integral motor can be e.g. started, stopped or the rotation direction changed. Digital inputs are also used in positioning function.

Two relay outputs pass fault and alarm signals or indicate when selected parameter values are exceeded.

I/O Connection Examples

These connections are shown as examples only. More detailed information can be found from the frequency converter part's User's Manual.

Ordering information

1. Standard design

When ordering an integral motor, please state the following minimum data in the order, as in the example.

2. Special designs

In addition to the minimum data all special features desired shall be stated expressly in the text of the order.

3. Note

- If the order is based on a quotation please state the number
- If the same motors were supplied before (replacement motors) please state their serial number (see motor rating plate).

Motor type	M3VK 80C
Pole number	4
Mounting arrangement (IM-code)	IM B3 (IM 1001)
Rated output	0.75 kW
Product code	3GVK082662-ASC
Variant codes if needed	
Type of drive	Standard drive

A	B	C	D	E	F	G

Explanation of the product code:

Positions 1 to 4

3GVK = Business area LV Motors
 Totally enclosed fan cooled squirrel cage
 integral motor with aluminum frame

Positions 5 and 6

IEC-frame

07 = 71
 08 = 80
 09 = 90
 10 = 100

Position 7

Speed (Pole pairs)

1 = 2 poles
 2 = 4 poles
 3 = 6 poles

Position 8

6 = Standard Drive
 7 = Drive with RFI filter

Position 9-10 - Running number series

Position 11

- (Dash)

Position 12

Mounting arrangement

A = Foot-mounted motor.
B = Flange-mounted motor. Large flange with clearance holes.
C = Foot-mounted motor. Small flange with tapped holes.
F = Foot- and flange-mounted motor. Special flange.
H = Foot- and flange-mounted motor. Large flange with clearance holes.
J = Foot- and flange-mounted motor. Small flange with tapped holes.
V = Flange-mounted motor. Special flange.

Position 13

Voltage and frequency code

Single-speed
D = 380-420 VD 50 Hz
 440-480 VD 60 Hz
S = 220-240 VD 50 Hz
 380-420 VY 50 Hz
 440-480 VY 60 Hz
X = Other voltage/frequency

Position 14

Generation code = A, B, C...

The product code must be, if needed, followed by variant codes.

General purpose integral motors

The two bullets in the product code indicate choice of mounting arrangement, voltage and nominal frequency.

- 1) Power stages are designed for the continuous I_{2N} current.
These values apply at altitudes less than 1000 m ASL.
- 2) With 8 kHz switching frequency derate I_{2N} to 70% in -10°C...40°C
or to 60% in 40°C...50°C.
- 3) 150 % of nominal current I_{2N} allowed for one minute every 10 minutes.
- 4) 180 % of nominal current I_{2N} allowed for two seconds.
- 5) Fuse type: UL class CC or T. For non-UL installations IEC269gG.

Use 60°C rated power cable (75°C if T_{amb} above 45°C).
Follow local rules for cable cross-sections.
Shielded motor cable is recommended.
Max. wire sizes/Power terminals (mm²):
single core: 4 (AWG 12), stranded: 2.5 (AWG 14)/torque 0.8 Nm
Max. wire sizes/Control terminals (mm²):
0.5-1.5 (AWG 22...AWG 16)/torque 0.4 Nm.

The two bullets in the product code indicate choice of mounting arrangement, voltage and nominal frequency.

- 1) Power stages are designed for the continuous I_{2NSQ} current.
These values apply at altitudes less than 1000 m ASL.
- 2) With 8 kHz switching frequency derate I_{2NSQ} to 70% in -10°C...40°C or to 60% in 40°C...50°C.
- 3) No overloadability
- 4) Fuse type: UL class CC or T. For non-UL installations IEC269gG.

Use 60°C rated power cable (75°C if T_{amb} above 45°C).

Follow local rules for cable cross-sections.

Shielded motor cable is recommended.

Max. wire sizes/Power terminals (mm²):

single core: 4 (AWG 12), stranded: 2.5 (AWG 14)/torque 0.8 Nm.

Max. wire sizes/Control terminals (mm²):

0.5-1.5 (AWG 22...AWG 16)/torque 0.4 Nm.

For 6 poles integral motors in Pump&Fan application select a product from General purpose codes.

General purpose integral motors

For pump and fan use, squared torque applications

Technical Specification for Frequency Converter

Mains connection

Power range: 0.55 - 3.0 kW

Voltage: 3-phase, 380 to 480 V \pm 10 %

Frequency: 48 to 63 Hz

Power factor: 0.98

Motor connection

Voltage: 3-phase, from 0 to U_{supply}

Frequency: 0 to 250 Hz

Constant torque applications

Continuous loading capability:

- Rated output current I_{2N}

Overload capacity (max. ambient temperature of 40°C):

- At constant torque: $1.5 \cdot I_{2N}$ for one minute every 10 minutes

- Starting torque: $1.8 \cdot I_{2N}$ for two seconds

Characteristic data for short time, intermittent and periodic load cycles are available on request.

Switching frequency:

- Standard 4 kHz

- Low noise 8 kHz *)

Squared torque applications

Continuous loading capability:

- Rated output current I_{2NSQ}

No overload capacity

Switching frequency:

- Standard 4 kHz

- Low noise 8 kHz *), with derating

Programmable control connections

Two analogue inputs:

- Voltage signal: 0 (2) to 10 V, 200 k Ω single ended

- Current signal: 0 (4) to 20 mA, 500 Ω single ended

- Potentiometer reference: 10 V \pm 2 % max. 10 mA, 1 k Ω \leq R \geq 10k Ω

- Response time: < 64 ms

- Resolution: 0.1 %

- Accuracy: \pm 1 %

One analogue output: 0 (4) to 20 mA, load < 500 Ω

Auxiliary voltage: 24 V DC, max 180 mA

Five digital inputs: 12-24 V DC with internal or external supply, PNP and NPN logic

- Input impedance: 1.5 k Ω

- Response time: < 5 ms

Two relay outputs:

- Switching voltage: 12 to 250V AC or max. 30 V DC/0.5 A

- Max. continuous current: 10 mA to 2 A

Built-in brake chopper

Pulse encoder: Connected to digital inputs DI4 and DI5, max. 25 V DC / 100 mA, max. pulse frequency 200 kHz

Serial communication for external control:

- Modbus protocol as standard, other fieldbus options available: PROFIBUS-DP, InterBus-S, DeviceNet, CANOpen, LONWORKS[®]

Programmable features *)

Nine application macros for easy configuration:

- Factory, ABB Standard, 3-Wire, Alternate, Motor Potentiometer, Hand-Auto, PID-Control, Pre-magnetize, Positioning

Acceleration time: 0.1 to 1800 s

Deceleration time: 0.1 to 1800 s

Skip frequencies: Two bands

Start and stop: Flying start, Torque boosting, Premagnetising function, DC hold function, DC injection braking

Functions:

- Output current and frequency limit, Programmable volts/herz ratio, IR compensation, Slip compensation, PID-control with sleep function, Seven preset speeds, Automatic fault reset, Two acceleration and two deceleration ramps, Control for electromechanical brake

Protection

Limits

- Over current trip limit: $3.5 \cdot I_2$

- DC current regulation limit: $0.5 \dots 1.5 \cdot I_2$

- DC over voltage trip limit: 875 V

- DC under voltage trip limit: 333 V

- Power-loss ride-through: 500 ms

- Over temperature limit: 105°C inside power module

Inverter protection:

- Output short circuit, Input phase loss, Inverter overload, Output earth-fault, Serial communication error, Loss of AI signal, I/O terminal short circuit, Auxiliary voltage short circuit, Brake resistor overload

Motor protection:

- Stall protection, Over temperature protection by I^2t estimation or PTC thermistors.

Environmental limits

Ambient operating temperature:

- Output current = I_{2N} and $f_{\text{switch}} = 4$ kHz: -10 to 40°C

- Output current = $0.7 \cdot I_{2N}$ and $f_{\text{switch}} = 8$ kHz: -10 to 40°C

- Output current = $0.6 \cdot I_{2N}$ and $f_{\text{switch}} = 8$ kHz: 40 to 50°C

- Output current = I_{2NSQ} and $f_{\text{switch}} = 4$ kHz: -10 to 40°C

- Output current = $0.7 \cdot I_{2NSQ}$ and $f_{\text{switch}} = 8$ kHz: -10 to 40°C

- Output current = $0.6 \cdot I_{2NSQ}$ and $f_{\text{switch}} = 8$ kHz: 40 to 50°C

- Refer to page 16 for more derating information

Installation altitude:

- Output current = I_2 : 0 to 1000 m

- Output current reduced by 1% for every 100 m above 1000 m. Max altitude 2000 m.

Protection class: IP 65

Colour: NCS 1502-Y, RAL 9002, PMS 420 C

Contamination levels: According to IEC-721-3-3

Electromagnetic Compatibility (EMC):

- Standard Drive: Fulfils EN 61800-3 2nd Environment distribution limits

- Drive with RFI filter: Fulfils EN 61800-3 1st and 2nd Environment distribution limits

Harmonic emissions:

- Units with < 1 kW input power fulfil EN 61000-3-2

- Units with > 1 kW input power are to be used only in professional applications

Product compliance

- Low Voltage Directive 73/23/EEC with amendments

- EMC Directive 89/336/EEC with amendments

- Quality Assurance systems ISO 9001 and ISO 14001

- CE, UL, cUL and C-Tick approvals

*) Adjustable only with control panel.

Frequency Converter Options

IP 65 Control Panel Kit

Variant code: 611

Full configurable functionality is available when using the optional control panel. With the control panel, parameters can be exchanged between two drives using the parameter upload/download procedure.

Fieldbus Gateways and RS485/232 Adapter

Variant code: see the table below

The integral motor can be connected to all major automation systems with the help of the large variety of fieldbuses. The fieldbus gateways are available in robust IP 65 boxes, which can be conveniently fitted on one side of the drive. The Modbus protocol is standard in all integral motor units and can be used by means of an RS485/232 adapter (CFB-RS).

Fieldbus technical data

Fieldbus	Type code	Variant code	Protocol mode	Device profile	Baudrate (min.-max.)
PROFIBUS	CFB-PDP	612	DP	Profidrive V.2	9.6 kbits/s - 12 Mbits/s
InterBus-S	CFB-IBS	613	PCP	Drivecom (Profile 21)	500 kbits/s
DeviceNet	CFB-DEV	616	N.A.	AC Drive	125 - 500 kbits/s
CANOpen	CFB-CAN	614	N.A.	Drives and Motion control (DS402 V.1.1)	10 - 1000 kbits/s
LONWORKS®	CFB-LON	615	LONTALK®	Variable Speed Motor Drive 6010	78 kbits
Modbus	CFB-RS	617	RTU	Vendor Specific	300 - 19200 bit/s

N.A. = Not applicable

Integral Brake Resistors

Variant code: see the table below

The integral motor brake resistor offers an optimal solution for braking, as braking choppers are a standard feature of the drives. The IP 65 brake resistors can be fitted on one side of the integral motor.

Brake resistor technical data

Integral motor output kW (general purpose ratings)	Brake resistor Type code	Variant code	Resistance Ohm W	Max. average resistor power W	Max. instantaneous resistor power
0.37...0.55 kW	CA-BRK-R1-1	618	390	39	700
0.75 kW	CA-BRK-R1-1	618	390	39	950
1.1 kW	CA-BRK-R1-2	619	125	39	1500
1.5 kW	CA-BRK-R1-2	619	125	39	2100
2.2 kW	CA-BRK-R2	620	125	45	3080

Cable gland set

Variant code: 230

A selection of cable glands for integral motor. The glands are for the following cable diameters: 5-9 mm (2 pcs), 6-12 mm (2 pcs) and 9-16 mm (2 pcs).

More options for frequency converter available separately

- AnyBus Communicator fieldbus gateways (Profibus-DP and DeviceNet)
- DriveWindow Light 2 start-up and maintenance PC tool.

ABB Motors' total product offer

ABB offers several comprehensive ranges of AC motors and generators. We manufacture synchronous motors for even the most demanding applications, and a full range of low and high voltage induction motors. Our in-depth knowledge of virtually every type of industrial processing ensures we always specify the best solution for your needs.

Low voltage motors and generators

General purpose motors for standard applications

- Aluminum motors
- Steel motors
- Cast iron motors
- Open drip proof motors
- Global motors
- Brake motors
- Single phase motors
- Integral motors

Process performance motors for more demanding applications

- Aluminum motors
- Cast iron motors
- Motors for high ambient temperatures

NEMA motors

High voltage and synchronous motors and generators

- High voltage cast iron motors
- Induction modular motors
- Slip ring motors
- Motors for hazardous areas
- Servomotors
- Synchronous motors and generators
- DC motors and generators

Motors for hazardous areas

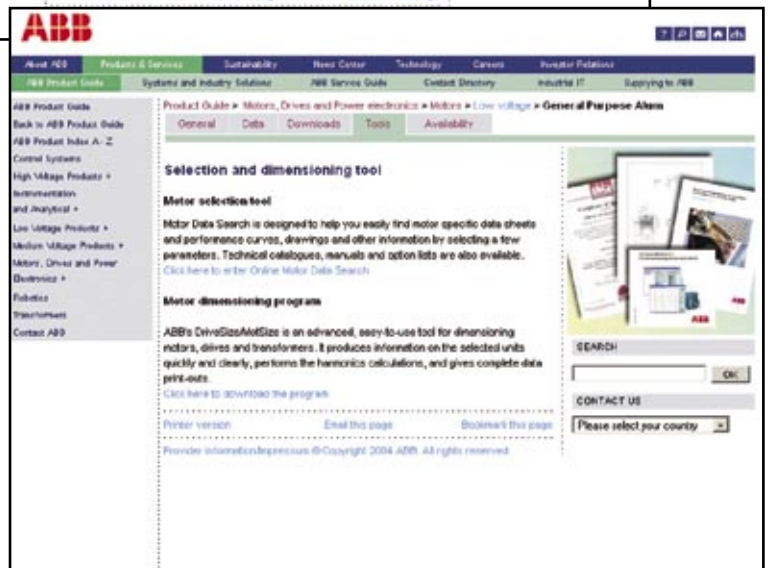

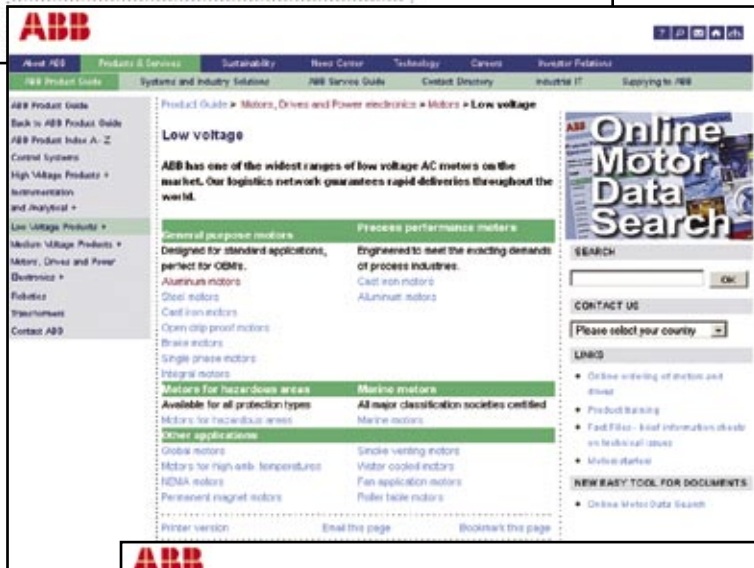

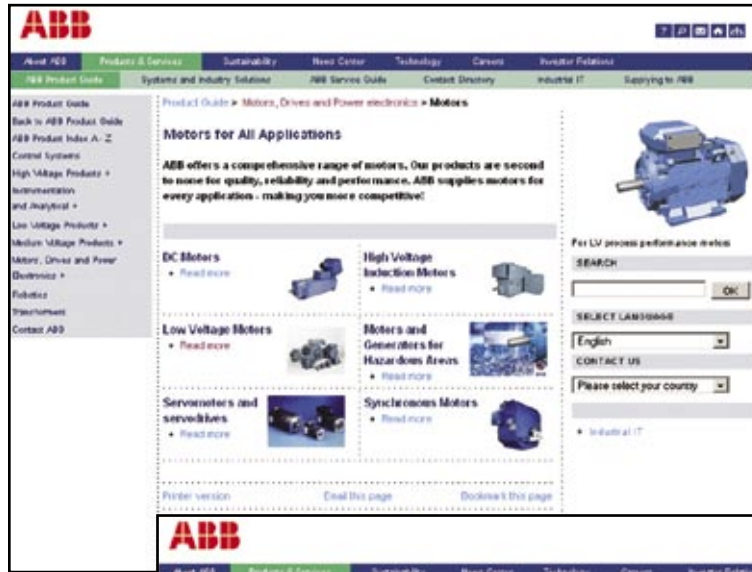

- Flameproof motors
- Increased safety motors
- Non-sparking motors
- Dust ignition proof motors

Marine motors

- Aluminum motors
- Steel motors
- Cast iron motors
- Open drip proof motors

Other applications

- Permanent magnet motors
- High speed motors
- Wind turbine generators
- Smoke venting motors
- Water cooled motors
- Motors for roller table drives

- Motors & Drives**
- => Low Voltage Motors
 - => **General purpose motors**
 - Aluminum motors
 - Steel motors
 - Cast iron motors
 - Global motors
 - Open drip proof motors
 - Brake motors
 - Single phase motors
 - Integral motors
