

Handles the toughest environments
without high maintenance costs

The Dodge® CST (Controlled Start Transmission) is a 2 in 1 gearbox which combines a planetary gear reducer with an integral wet clutch system. Designed for the harsh environment of the mining industry, the CST drive package is a cost effective solution, engineered specifically to deliver total control of the most difficult high inertia loads such as long conveyor belts and conveyors with multiple synchronized drives. CST is a simple, reliable solution for high availability and lower cost of ownership.
